

# SMH Driver Operator Commands

The Entire Net-Work SMH line driver supports the TCPX line driver operator commands, with one exception: you cannot issue a CONNECT operator command to SMHLINK.

Under z/OS, the SMH line driver operator commands have the following format:

```
F NETWORK,SMH target cmd
```

The following table describes this syntax.

Syntax Representation	Description
SMH	Informs Entire Net-Work that the command is destined for the SMH line driver.
<i>target</i>	A value that informs SMH what the target of the command is, as follows: <ul style="list-style-type: none"><li>• Specify an asterisk (*) if the target is all links.</li><li>• Specify the DRVCHAR value ("#" is the default) if the target is the driver itself (see the DRVCHAR parameter on the TCPX DRIVER statement).</li><li>• Specify the link name if the target is a specific link.</li></ul>
<i>cmd</i>	The operator command to be carried out.
