ADAK* System Messages

The following messages may appear when errors occur in the Adabas CICS and BS2000 TP monitor interface operations.

When CICS is started, the Adabas TP monitor component displays several informational or error messages on the system console. These often contain the addresses of key Adabas and CICS control blocks which are useful in problem determination.

- Be sure that the console messages indicate that the Adabas TRUE environment has been properly established.

- If an error message is produced, note the CICS EIBRESP, EIBRESP2, and EIBRCODE, which is displayed.

- Note any Adabas response code (ACBRSP) displayed by the TP monitor program at CICS startup.

Overview of Messages

```
ADAK001 | ADAK01 | ADAK02 | ADAK02A | ADAK02B | ADAK03 | ADAK04 |
ADAK040 | ADAK041 | ADAK042 | ADAK043 | ADAK044 | ADAK045 | ADAK046 |
ADAK047 | ADAK048 | ADAK049 | ADAK05 | ADAK050 | ADAK051 | ADAK052 |
ADAK053 | ADAK054 | ADAK055 | ADAK056 | ADAK057 | ADAK058 | ADAK059 |

```

ADAK001   **Installation messages will be written to queue *qname* file *dname***

Explanation   This message is produced when the following ACIOPT statement is coded:

```
ACIOPT ENTRY=GLOBAL,IMSGDEST=TDQ/BOTH,IMQNAME=qname
```

It provides the name of the transient data queue (qname) where installation messages are written and the DD name (z/OS) or DLBL name (z/VSE) of the file (dname) associated with the transient data queue

Action   No action is required for this informational message.

ADAK01   *dbid* **Unexpected return code** *ret-code* **in** *function*

Explanation   During BS2000 TP monitor interface operations, the return code (*ret-code*) given in the
                  message occurred in one of the following functions and for the specified reason:

Function	Reason
TRGENAMP	enable memory pool (ENAMP) to target failed
IDTENAMP	enable memory pool (ENAMP) for IDT failed
DSOFEI	DSOFEI macro failed
UENAEI	ENAEI failed for user name
SOLSIG	SOLSIG macro failed
LNKLEVEL	the ADALNK and ADARER levels disagree (see the first and last bytes of "ret-code")

Action   See the BS2000 Executive Macro documentation for an explanation of "ret-code".

ADAK02   **Types of LOADLIB for ADALNK (***adalnk***) and ADARER mismatch**

Explanation   During BS2000 TP monitor interface operations, one module was loaded from an XS
                  library and the other from an NXS library. NXS and XS components cannot be mixed.

                  This message is accompanied by the ADAK01 message.

                  The *adalnk* field of this message has the format $xx0000yy$, where *xx* is the level of the
                  ADALNK and *yy* is the level of the ADARER (router). The value of *yy* must be greater
                  than or equal to the value of *xx*.

                  If *yy* is less than *xx*, the IDT common memory where the ADARER is loaded has been
                  created by and loaded from an older Adabas version. For example, if xx=83 and yy=81,
                  an Adabas 61x ADALNK is using an Adabas 53x ADARER.

Action   Check the Adabas library versions of the databases that are using the IDTNAME (the
                  default is ADABAS5F) of your ADALNK.

                  Either upgrade databases using older Adabas libraries to the new version, or use
                  different IDTNAMEs for different Adabas versions.

ADAK02A   **Could not get Router - Error -** *err*

Explanation   A BS2000 attempt to access the ID table memory pool given in the parameter file or module returned the error shown in the message (*err*), probabl in ENAMP.

This error is accompanied by the user abend 680.

Action   Check the parameter file for the IDTNAME or DBTIDT value; otherwise check the BSCONFIG(ENVNAME), IDTABEL, or MDBIDT macros in SSFB2C.

ADAK02B   **DB Table Get memory - Error -** *err1*
               or DB Table Initialization Error - *err2*

Explanation   The DBID/ID table cannot be set up or accessed. This message is accompanied by user abend 678 or 679. This is usually an error in getting memory. The error code is from a BS2000 macro.

Action   Contact your Software AG technical support representative with the error code produced.

ADAK03   **Parameter error**

Explanation   During BS2000 TP monitor interface operations, the ADALNK parameter service detected a syntax error.

Action   Correct the syntax and rerun.

ADAK04   **The following ADALNK (***adalnk***) are used for this run**

Explanation   This is the header of the ADALNK parameter listing used during BS2000 TP monitor interface operations.

Action   No action is required.

ADAK040   **Enabling** *nnnn* **Adabas task related user exits for Version 8 of ADACIC0**

Explanation   Explanation: This message is produced at the beginning of ADACIC0 installation processing and identifies the number of TRUEs that ADACIC0 is attempting to install. The number (*nnnn*) is derived from the number of ENTRY=GROUP items that were coded in the ACIOPT module

Action   No action is required for this informational message.

ADAK041   **Extracting global work area (GWA)**

Explanation   During CICS PLTPI processing, CICS is determining the location of the global work area (GWA) for the command-level link components.

ADAK042   **Initializing Adabas link routine**

Explanation   During CICS PLTPI processing, an initialization call is being made to the command-level link routine.

ADAK043   **Initializing Adabas SVC communication**

Explanation   During CICS PLTPI processing, the Adabas SVC environment is being established.

ADAK044   **Adabas v*vrs* CICS environment established**

Explanation   During CICS PLTPI processing, the CICS environment needed for the command-level link components has been built.

ADAK045   **T.R.U.E. *true-name* is in use by Adabas link routine *link-name***

Explanation   This message occurs during CICS PLTPI processing and displays the task-related user exit name and the Adabas link routine with which it is associated.

ADAK046   **SVC number: *svc* default DBID: *dbid***

Explanation   This message occurs during CICS PLTPI processing and displays the default SVC number and DBID.

ADAK047   **UB pool address: *aaaaaaaa* NUBS: *nnnnn***

Explanation   This message occurs during CICS PLTPI processing and displays the UB pool address and NUBS value.

ADAK048   **User exit after (A) address: { *aaaaaaaa* | NOT IN USE }**

Explanation   This message occurs during CICS PLTPI processing and displays the address of the Adabas user exit 1 (user exit A in Adabas 7) or "not in use" if the user exit is not in use.

ADAK049   **User exit before (B) address: {** *aaaaaaaa* **| NOT IN USE }**

Explanation This message occurs during CICS PLTPI processing and displays the address of the
                 Adabas user exit B or "not in use" if user exit B is not in use.

ADAK05   **DDLNKPAR {open|close} error:** *err*

Explanation During BS2000 processing an attempt to access the file associated with the link name
                 DDLNKPAR failed. The error is a DMS error code.

Action   Perform a SHOW-FILE on the file associated with the linkname DDLNKPAR. If a
                 DMS error occurs, perform HELP_MESSAGE DMSnnnn. This should help identify the
                 problem.

ADAK050   **Review exit address: {** *aaaaaaaa* **| NOT IN USE }**

Explanation This message occurs during CICS PLTPI processing and displays the address of the
                 Adabas Review exit, or "not in use" if the Adabas Review exit is not in use.

ADAK051   **Adabas SAF Security (ADASAF) in use**

Explanation During CICS PLTPI processing, the Adabas external security interface (ADASAF) is in
                 use. This message is not displayed if ADASAF is not in use.

ADAK052   **Adabas Transaction Manager (ATM) in use**

Explanation During CICS PLTPI processing, Adabas transactions are being coordinated through the
                 CICS Resource Manager Interface (RMI) using the Adabas Transaction Manager
                 (ATM). This message is not displayed if the RMI is not in use.

ADAK053   **Adabas Bridge for VSAM (AVB) in use**

Explanation During CICS PLTPI processing, the Adabas Bridge for VSAM (AVB) is in use. This
                 message is not displayed if AVB is not in use.

ADAK054   **T.R.U.E. global work area (GWA) address:** *aaaaaaaa*

Explanation This message occurs during CICS PLTPI processing and displays the address allocated
                 to the global work area.

ADAK055   **Adabas link routine EPA:** *aaaaaaaa*

Explanation   This message occurs during CICS PLTPI processing and displays the entry point
                address (EPA) of the Adabas link routine.

ADAK056   **Adabas link routine D.C.I. EPA:** *aaaaaaaa*

Explanation   This message occurs during CICS PLTPI processing and displays the entry point
                address (EPA) of the Adabas link routine direct call interface (DCI).

ADAK057   **Adabas SVC IDTH address:** *aaaaaaaa*

Explanation   This message occurs during CICS PLTPI processing and displays the address of the
                Adabas SVC IDT header.

ADAK058   **RESYNC command issued**

Explanation   During CICS PLTPI processing, the CICS RMI for Adabas is in use and
                resynchronization will now take place for any incomplete transactions involving
                Adabas databases.

ADAK059   **ATM inactive; RESYNC deferred**

Explanation   During CICS PLTPI processing, the CICS RMI for Adabas is in use and
                resynchronization may be required for incomplete transactions involving Adabas
                databases. However, the Adabas Transaction Manager (ATM) is not currently active.
                Resynchronization will occur when ATM is restarted.

ADAK06   **ADALNK statements ignored because ADARUN statements present**

Explanation   A BS2000 session is running an ADALNK with both ADARUN and link name
                DDCARD, together with a file on the link name DDLNKPAR. The parameters in
                DDLNKPAR will not be used.

Action   No action required for this informational message.

ADAK061   **ADATRUE - Enable stage failed EIBRESP:** *xxxxxxxx1* **EIBRESP2:** *xxxxxxxx2*

Explanation   The task related user exit could not be enabled due to the EIB response codes *xxxxxxxx1*
                and *xxxxxxxx2*.

Action   Consult the appropriate CICS documentation to determine the cause of the error in the
                exec interface block (EIB).

ADAK062   **ADATRUE extract GWA failed EIBRESP: *xxxxxxx1* EIBRESP2: xxxxxxxx2**

Explanation   The requested task-related user exit global storage could not be EXTRACTed due to the
                   EIB response codes given as *xxxxxxx1* and *xxxxxxxx2*.

Action   Consult the appropriate CICS documentation to determine the cause of the error in
                   extracting the global work area.

ADAK063   **Initialization call to link routine failed EIBRCODE: *xxxxxxx* ADARSP: *nnnn***

Explanation   The Initialize Link command (IL) could not be executed because of EIB response code
                   xxxxxxx, or Adabas response code *nnnn*.

Action   If the EIBRCODE field returns a non-zero value, consult the appropriate CICS
                   documentation to determine the cause of the error. If the ADARSP returns a non-zero
                   value, consult the response codes in chapter 2.

ADAK064   **Adabas call to establish IDTH failed**

Explanation   The close command (CL) to Adabas failed due a response code other than response
                   code 148 (ADARSP148).

Action   Most often, this is caused by an incorrect Adabas SVC number in the ADAGSET
                   macro; otherwise, check to see that the Adabas SVC is installed, and at the correct
                   version.

ADAK065   **Invalid D.C.I address - cannot continue**

Explanation   The IDTH address was not set by the command-level link routine during the CL
                   command.

Action   Verify that the correct version of the Adabas command-level link routine is installed,
                   and that the entry point name "ENTPT=" in ADAGSET is correct.

ADAK066   **ADACIC0 version: *version* does not match Adabas link**

Explanation   The ADACIC0 version does not match the version of the ADATRUE or Adabas link
                   routine being installed. All three modules must be at the same version for the install to
                   succeed.

Action   Verify that the correct version of all three modules is installed.

ADAK068   *message-text*

Explanation   Various message texts may be provided using this message number. Review the table
                    below to determine the cause of the error and the course of action to take.

Message Text	Explanation	Action
LOAD of installation options table *tbl* failed EIBRESP: *eibresp*	The load failed for the Adabas installation options table module named *tbl* by the CICS command-level link routine module. The hexadecimal representation of the CICS EIBRESP returned by the failing EXEC CICS LOAD command is given in the message.	Determine the meaning of the EIBRESP code. Check the DFHRPL concatenated libraries to ensure that the ACIOPT module is available to the CICS region.
RMI initialization error: CMD: *cmd* RESP: *resp* RC: *rc*	The RMI initialization routine could not complete its processing due to the indicated error. The message may provide a failing CICS command (*cmd*) and response code (*resp*), or an ATM error code (*rc*) and, if relevant, Adabas response code (*resp*).	Investigate the meaning of the displayed response code and/or error code. If possible, correct the error; otherwise, report the details to your Software AG technical support representative.
Adabas installations options table name *tbl* is invalid.	The installation options table module listed in the message (*tbl*) has been loaded but does not have valid contents.	A valid installation options table module should have the eyecatcher 'ACIOPT ' at the beginning of the module. Verify the module has this eyecatcher and correct accordingly.

Action   The action that should be taken depends on the message text issued with this message
                    number. Review the table above for the appropriate action.

ADAK069   *message-text*

Explanation   Various message texts may be provided using this message number. Review the table
                   below to determine the cause of the error and the course of action to take.

Message Text	Explanation	Action
Load of ACI link routine failed EIBRCODE: *eibrcode*	The load of the Adabas command-level link routine module failed. The hexadecimal representation of the CICS EIBRCODE (*eibrcode*) returned by the failing EXEC CICS LOAD command is given in the message.	Determine the cause of the failure. The reason for the failure may be determined by examining previous messages produced by the ADACIC0 installation program. These messages are written to the JES job log for z/OS and to SYSLOG for z/VSE. For more information please consult your Adabas installation documentation.
Load of DBID/SVC table *tbl-name* failed EIBRESP *eibrc*	An attempt to load the DBID/SVC routing table named in the message (*tbl-name*) failed. The CICS EIB response code (*eibrc*) is given in the message.	Verify that the correct DBID/SVC load module name was specified for the LGBLSET DBSVCTN parameter. If it was not, correct the name and try again. If the correct name was specified, review the CICS EIB response code to identify the nature of the failure. If the problem persists, contact your Software AG support representative for assistance.

Action   The action that should be taken depends on the message text issued with this message
                   number. Review the table above for the appropriate action.

ADAK07   **LRVINFO>0 and module REVEXITB not found, processing continues**

Explanation   During BS2000 TP monitor interface operations, a nonzero LRVINFO parameter value
                   was specified in the ADALNK parameter, but the Adabas Review user exit B
                   (REVEXITB) module could not be found. Program processing continues without
                   REVEXITB.

Action   Either specify LRVINFO=0, remove the LRVINFO parameter statement, or include the
                   REVEXITB module in the program.

ADAK070   **Adabas T.R.U.E. disabled** *module-name*

Explanation   A failure occurred during the execution of the enhanced installation program. The
                   Adabas TRUE (Task Related User Exit) is disabled. The name of the Adabas TRUE
                   module being installed is given in the message (*module-name*).

Action   Determine the cause of the failure. The reason for the failure may be determined by
                   examining previous messages produced by the ADACIC0 installation program. These
                   messages are written to the JES job log for z/OS and to SYSLOG for z/VSE. For more
                   information please consult your Adabas installation documentation.

ADAK071   **Adabas link routine released** *module-name*

Explanation   A failure occurred during the execution of the enhanced installation program. The CICS
                   command-level link routine has been released. The name of the Adabas CICS
                   command-level link routine being installed is given in the message (*module-name*).

Action   Determine the cause of the failure. The reason for the failure may be determined by
                   examining previous messages produced by the ADACIC0 installation program. These
                   messages are written to the JES job log for z/OS and to SYSLOG for z/VSE. For more
                   information please consult your Adabas installation documentation.

ADAK072   **GETMAIN for UB-POOL failed EIBRESP:** *0000nnnn*

Explanation   The CICS GETMAIN for shared storage for the Adabas user buffer pool failed. The
                   returned value of EIBRESP from the CICS request is printed in hexadecimal at the end
                   of the message.

Action   Consult the appropriate IBM CICS documentation for the meaning of the returned
                   EIBRESP value.

ADAK073   **Freemain for UB-POOL failed EIBRESP:** *0000nnnn*

Explanation   The storage for the Adabas user buffer pool was not released. The returned value of
                   EIBRESP from the CICS FREEMAIN request is returned at the end of the message.

Action   Consult the appropriate IBM CICS documentation for the meaning of the returned
                   EIBRESP value.

ADAK074   **Adabas DBID/SVC table in use is:** *table-name*

Explanation   The LGBLSET parameters DYNDBSVC=YES and DBSVCTN=*dbid-svc-tbl-name*
                     parameters are coded in the CICS link globals table and the named DBID/SVC routing
                     table is found and loaded. The name of the DBID/SVC routing table is given in the
                     message (*table-name*).

Action   No action is required for this informational message.

ADAK075   **REVEXIT2 {client exit address:** *address***|Not Installed|Not Active}**

Explanation   This message provides the status of the Adabas Review client exit, REVEXIT2. If a
                     hexadecimal address is listed in the message, the Adabas Review client exit is installed
                     and active. If "Not Installed" is listed in the message, then the Adabas Review client
                     exit is not linked with the globals table used by the TRUE being activated in this phase
                     of the installation. If "Not Active" is listed in the message, the Adabas Review client
                     exit is linked with the globals table, but REVCLNT=NO was coded before the globals
                     table was assembled and the exit is considered inactive.

Action   No action is required for this informational message.

ADAK076   **The default Hub-id is: {***hubid***|Dynamic}**

Explanation   If the Review client exit is installed (see ADAK075), this message is produced during
                     the installation of the Adabas CICS components to indicate the default Adabas Review
                     hub ID that will be used by this client exit. If the numeric hub ID is listed in the
                     message, then this is the target where client records will be sent by default, as specified
                     in the globals table with the REVHID keyword. If "dynamic" is listed in the message
                     instead of a specific hub ID, then no value was given in the globals table and the caller,
                     usually SYSREVDB, must provide the hub ID to be used by the Adabas Review client
                     exit.

Action   No action is required for this informational message.

ADAK08   **Review exit B deactivated. processing continues**

Explanation   During BS2000 TP monitor interface operations, LRVINFO=0 was either specified or
                     omitted in the ADALNK parameter or the entire ADALNK parameter service is
                     inactive, and the Adabas Review user exit B (REVEXITB) is present in the user
                     program.

Action   To activate REVEXITB, specify LRVINFO=256; otherwise, no change is necessary.

ADAK080   *nnnn* **of** *tttt* **TRUEs installed**

Explanation   This message is issued at the end of ADACIC0 installation processing. It provides the actual number of TRUEs that were successfully installed (*nnnn*) and identifies the number of TRUE installations that were attempted (*tttt*).

Action   No action is required for this informational message.

ADAK09   **Incompatible versions of ADALNK and ADAL2P, processing aborted**

Explanation   During BS2000 TP monitor interface operations, it was determined that the versions of ADALNK and ADAL2P do not match.

Action   Check library assignments; check TSOSLNK/BINDER protocols.

ADAK10   **ADAUSER** *type* **for entry** *module* **RC** *rc*

Explanation   During BS2000 TP monitor interface operations, an error occurred while attempting to access the Adabas link module where *type* is either REQM for requesting memory or BIND for attempting to load; *module* is the name of the module to be accessed; and *rc* is the Fujitsu Technology Solutions macro return code.

Action   If the *type* is

- BIND, check the file link statements for the presence of the Adabas library

- REQM, there is a memory shortage in the application program address space
