ARXM* - Event Replicator for Adabas Messages for Event Replicator Target Adapter

Overview of Messages

ARXML001I | ARXML002I | ARXML003I | ARXML004I | ARXML005S | ARXML006I | ARXML008S

ARXML001I   **XML TA Exit Startup for *dest-name* - Version *n.n.n.n* Built: *yyyymmdd***

Explanation   Event Replicator Target Adapter initialization processing for destination *dest-name* has been started. The Event Replicator Target Adapter version (*n.n.n.n*) and the date (*yyyymmdd*) the Event Replicator Target Adapter code was built are also given in the message.

Action   No action is required for this informational message.

ARXML002I   **XML TA Exit *dest-name* Terminating**

Explanation   Event Replicator Target Adapter termination processing for destination *dest-name* has been started.

Action   No action is required for this informational message.

ARXML003I   **Destination *dest-name* now active for *jobname***

Explanation   Event Replicator Target Adapter processing for destination *dest-name* has been activated. The job name (*jobname*) of the Event Replicator Server is also given in the message.

Action   No action is required for this informational message.

ARXML004I   **Received *code* event for *dest-name***

Explanation   Event Replicator Target Adapter processing received the internal event code (*code*) listed in the message for destination *dest-name*.

Action   No action is required for this informational message.

ARXML005S   **Required field table information missing for subscription *subs-name***

Explanation   Required field table information was missing for subscription *subs-name* during Event
Replicator Target Adapter processing. This information is required for building the
XML messages used in Event Replicator Target Adapter processing.

Action   Verify that you have *generated* a global format buffer (GFB) for the subscription. If
you do not *generate* a global format buffer using the tools provided in the Adabas
Event Replicator Subsystem or in Event Replicator Administration, or if you elect to
code a GFB by hand, the required field table information is not constructed for use by
the Event Replicator Target Adapter. For more information, read one of the following
sections:

- *Generating a GFB using the Adabas Event Replicator Subsystem*

- *Generating a GFB using Event Replicator Administration*.

For more information about correctly activating Event Replicator Target Adapter
processing, read *Activating Event Replicator Target Adapter Processing*.

If the problem persists, contact your Software AG support representative.

ARXML006I   **Schema generation for *subs-name* triggered**

Explanation   An internal schema is being generated by Event Replicator Target Adapter, based on
the field information provided in subscription *subs-name*. This internal schema maps
the replicated data that the Event Replicator Target Adapter then transforms and
applies to your relational database.

Action   No action is required for this informational message.

ARXML008S   **Unsupported code page=*acode*, default to CP037**
Subscription=*subname*, DBID=*dbid*, FNR=*fnr*

Explanation   The code page (*acode*) listed in the message for the subscription (*subname*), DBID
(*dbid*), and FNR (*fnr*) is not supported.

Code page Cp037 will be used for the XML tags and as the code page identifier sent
to Event Replicator Target Adapter. Event Replicator Target Adapter will process the
data as if it were code page 37, so the data loaded into the RDBMS table(s) may be
corrupted. This message is displayed once per combination of incompatible
subscription, DBID, file, and code page values.

Action   If use of code page Cp037 is valid, no action is required for this message.

However, if use of code page Cp037 is invalid, you will also want to verify that the
data in your RDBMS table is not corrupted and correct it if it is. Then specify the
correct code page in the SACODE parameter and try again.
