

BATCH: Set Printout Width to 132 Characters Per Line

```
ADAICK BATCH [NOUSERABEND]
```

Note:

The NOOPEN parameter can be specified for this function, but is ignored by Adabas.

If ADAICK is to be used in batch mode, this function may be used to set the printout width to 132 characters per line. See the NOBATCH function for information about resetting the printout width.

Optional Parameter

NOUSERABEND: Termination without Abend

When a parameter error or a functional error occurs while this utility function is running, the utility ordinarily prints an error message and terminates with user abend 34 (with a dump) or user abend 35 (without a dump). If NOUSERABEND is specified, the utility will *not* abend after printing the error message. Instead, the message "*utility* TERMINATED DUE TO ERROR CONDITION" is displayed and the utility terminates with condition code 20.

Note:

When NOUSERABEND is specified, we recommend that it be specified as the first parameter of the utility function (before all other parameters). This is necessary to ensure that its parameter error processing occurs properly.
