

NIPRINT: Print/Dump Normal Index

Use the NIPRINT function to print and dump the normal index.

```
ADAICK NIPRINT FILE = file-number  
[NOUSERABEND]
```

Note:

The NOOPEN parameter can be specified for this function, but is ignored by Adabas.

Essential Parameter

FILE: File Number

The number of the file for which the normal index is to be printed/dumped. A file number is required the first time you execute ADAICK.

If FILE is omitted on subsequent executions, the last file accessed by ADAICK is used.

Optional Parameter

NOUSERABEND: Termination without Abend

When a parameter error or a functional error occurs while this utility function is running, the utility ordinarily prints an error message and terminates with user abend 34 (with a dump) or user abend 35 (without a dump). If NOUSERABEND is specified, the utility will *not* abend after printing the error message. Instead, the message "*utility* TERMINATED DUE TO ERROR CONDITION" is displayed and the utility terminates with condition code 20.

Note:

When NOUSERABEND is specified, we recommend that it be specified as the first parameter of the utility function (before all other parameters). This is necessary to ensure that its parameter error processing occurs properly.
