PPTPRINT: Print/Dump Parallel Participant Table

```
ADAICK  PPTPRINT  [NOUSERABEND]
```

Note:
The NOOPEN parameter can be specified for this function, but is ignored by Adabas.

Use the PPTPRINT function to dump and print the parallel participant table (PPT) for the Adabas cluster. Note that in the dump/print, 'PPH' is the tag for the PPT header and 'PPE' is the tag for the PPT entries.

Each of the 32 blocks (RABNs) allocated for the PPT represents a single nucleus in the cluster and comprises

- a single header of fixed length; and
- multiple entries of variable length.

In the dump/print, 'PPH' is the tag for a PPT block's header and 'PPE' is the tag for a PPT block's entries.

This chapter covers the following topics:

- Optional Parameters
- Example Output

Optional Parameters

NOUSERABEND: Termination without Abend

> When a parameter error or a functional error occurs while this utility function is running, the utility ordinarily prints an error message and terminates with user abend 34 (with a dump) or user abend 35 (without a dump). If NOUSERABEND is specified, the utility will *not* abend after printing the error message. Instead, the message "*utility* TERMINATED DUE TO ERROR CONDITION" is displayed and the utility terminates with condition code 20.
>
> **Note:**
> When NOUSERABEND is specified, we recommend that it be specified as the first parameter of the utility function (before all other parameters). This is necessary to ensure that its parameter error processing occurs properly.

Example Output

```
ADAICK PPTPRINT
