Overview

Data Archiving for Adabas (ADR) is a new product from Software AG. As the name implies it allows you to systematically archive data from Adabas in a very controlled, efficient way. Archived data can be recalled into Adabas at a later date.

The following platforms are supported by this version:

- Solaris

- Windows XP Professional

- Windows Server 2003

- Windows Vista Professional

- Windows Server 2008

- Windows 7 Home

- Windows 7 Professional

- z/OS

Important:
Prior to using data archiving, ensure that the data to be archived has been backed up using ADASAV in case a restore is required.

- Installing and Using ADR Components
- New Functionality
- Coming Later…Functionality not yet Delivered
