Client Session Memory Requirements

Note:

For information about the client-related memory requirements of the Adabas System Coordinator in the application address space, refer to the *Adabas System Coordinator* documentation.

The additional memory requirement per client session for the Adabas Transaction Manager client proxy is approximately:

- 1024 bytes for session maintenance
- plus 268 bytes for session statistics maintenance
- plus 16 times the value of the `MaximumNumberOfDatabases` runtime control

Bear in mind that certain settings of the Natural `ADAMODE` parameter cause Natural to execute two sessions in parallel for each terminal user. This increases the effective number of clients in the client address space.
