Upgrading from Previous Releases

This section describes actions which must be taken when upgrading from a previous release.

General Upgrade Considerations

Care must be taken so that the upgrade is only performed when no recovery data exists. That is; no outstanding recovery records, no suspect transaction records, no migrated transaction records, and no pending error records. Use the Adabas Transaction Manager Online Services to purge any outstanding records before an upgrade is performed. Recovery information from previous releases can not be migrated to Version 8.2 (with the exception of ET Data – see below).

ET Data Migration

If your site uses `ET` data and your TMs run with `TMETDATA=ATM` then current `ET` data must be migrated from the old `ET` data Adabas file repository to the new recovery file repository. Refer to the section *Display/Start ET Data Management Activity* for information on how to manage this migration.
