

# Adabas Compatibility

Some Adabas parameters may need to be tuned for use with Adabas Vista. See section Using Adabas Parameters for more information.

Adabas Vista does not support the following features of Adabas:

- single-user mode
- TCP/IP interface

Adabas Vista does not support multiple Adabas SVCs under Com-plete.

There are additional considerations when using triggers and stored procedures with partitioned or translated files. See section Support for SPATS in the *Installation* documentation for more details.
