

# Mainframe Database Maintenance Levels

▶ To review maintenance levels for mainframe databases:

1. Select an Adabas database in tree-view and expand it.
2. Select **Maintenance**.

The maintenance levels for the database are displayed in a table in detail-view.

The table displayed provides maintenance information about the loaded Adabas nucleus modules:

<b>Information Type</b>	<b>Description</b>
Module	The name of a nucleus module.
CSECT	The name of the CSECT associated with a nucleus module.
Date	The date of the last assembly.
Version	The Adabas version of the module.
Base	The base for ZAP numbering (corresponds with the SM level of the module).
Zaps	A list of zaps that have been applied to the module.
