

# INT: Activate Interpreted Print Format

```
ADAICK INT [NOUSERABEND]
```

This function requests that blocks are printed in an interpreted format. See the NOINT function for information about suppressing interpreted print format. This function should only be used in conjunction with the ASSOPRINT, DATAPRINT, FCBPRINT, FDTPRINT, GCBPRINT, and PPTPRINT functions.

If both the INT and DUMP functions are specified, blocks are printed in both formats.

**Note:**

The NOOPEN parameter can be specified for this function, but is ignored by Adabas.

---

## Optional Parameter

**NOUSERABEND: Termination without Abend**

When a parameter error or a functional error occurs while this utility function is running, the utility ordinarily prints an error message and terminates with user abend 34 (with a dump) or user abend 35 (without a dump). If NOUSERABEND is specified, the utility will *not* abend after printing the error message. Instead, the message "*utility* TERMINATED DUE TO ERROR CONDITION" is displayed and the utility terminates with condition code 20.

**Note:**

When NOUSERABEND is specified, we recommend that it be specified as the first parameter of the utility function (before all other parameters). This is necessary to ensure that its parameter error processing occurs properly.
