Welcome to Adabas SAF Security

This Adabas option allows you to integrate Adabas with a central security repository such as RACF, CA-ACF2 or CA-TopSecret.

ADASAF provides all the safeguards you would expect for:

- * Database nuclei
- * Database access/update commands
- * Console operator commands
- * Database files
- * Adabas utilities

In addition ADASAF provides:

- * Optional consideration of the originating job as well as user, known as Cross-level Checking, allowing differentiation between a SAF user running production and that same SAF user running in development
- * Protection of transaction data for ET, RE, OP and CL commands
- * Storing of Adabas passwords and cipher codes in the security repository
- * Adabas Fastpath compatibility and utility sensitivity
