

CAS* - Adabas System Coordinator Cluster Application Service Messages

CASnnn messages are issued from the clustered application service operating in the Adabas System Coordinator component.

Overview of Messages

CAS001I	CAS002I	CAS003I	CAS004I	CAS005I	CAS006E	CAS007I
CAS008S	CAS009I	CAS010I	CAS011E	CAS012E	CAS013I	CAS014E
CAS015E	CAS016E	CAS017S	CAS018W	CAS019E	CAS020W	CAS021I
CAS022I						

CAS001I JOB jobname CREATED POOL poolname AT address length

Explanation A component task of a clustered application has started. The started task (job) is defined to use SYSCO to manage application users. User information is maintained in a common memory pool so that it can be shared with other components of the application.

This message is issued when the common memory pool is created.

Action None. This message is for information only.

CAS002I JOB jobname JOINED POOL poolname AT address length

Explanation A component task of a clustered application has started. The started task (job) is defined to use SYSCO to manage application users. User information is maintained in a common memory pool so that it can be shared with other components of the application.

This message is issued when the new task joins an existing memory pool.

Action None. This message is for information only.

CAS003I POOL poolname DELETED AT address length

Explanation All jobs using a common memory pool have terminated. The pool is deleted and its memory is released.

Action None. This message is for information only.

CAS004I JOB jobname ACTIVE

Explanation A request was received to shut down a SYSCO daemon, but client jobs are still active on this daemon.

Action Terminate the client job(s) and re-issue the shutdown request.

CAS005I JOB jobname CREATED POOL EXTENT poolname AT address length

Explanation A common memory pool is full and has been dynamically extended.

Action None. This message is for information only.

CAS006E JOB jobname CAS MANAGEMENT TERMINATED BY HALT

Explanation CAS management has been terminated.

Action No action, the HALT action has taken place as requested.

CAS007I XCF PING FROM #####

Explanation An XCF ping has been received.

Action None. This message is for information only.

CAS008S CANNOT LOAD CAS KERNEL CASKRN - SHUTDOWN INITIATED

Explanation The clustered application service (CAS) kernel module cannot be loaded.

Action Ensure that the load library containing the kernel module is available to the Adabas System Coordinator daemon task.

CAS009I Sysco name node system users

Explanation The header line for the CAS010I message.

Action None. This message is for information only.

CAS010I #####

Explanation The details for the CAS009I message.

Action None. This message is for information only.

CAS011E COMMAND FAILED, RSP=#####, RC=#####

Explanation A System Coordinator operator command has failed.

Action This message is currently issued only in response to the DN (Display Active Nodes) command. The DN command is used to display Coordinator daemon nodes in a Sysplex configuration. Message CAS011E indicates that one or more nodes could not be contacted. Check the coordinator definitions and tasks to identify any setup problems that may have caused this error. Contact your Software AG technical representative for assistance if necessary.

In a standard (non-sysplex configuration) the command will fail and message CAS011E is the normal response. No further action is required.

CAS012E SESSION STATUS RSP=#### / ####, NO SESSION RECOVERY WILL BE ATTEMPTED

Explanation An attempt to read the session status record failed. The daemon cannot determine if session or pool recovery is required.

Action Determine the reason for the read failure. It will not be possible to recover any previous failed session if the status record cannot be located.

CAS013I NO SESSION STATUS RECORD, PREVIOUS SESSION RECOVERY WILL NOT BE ATTEMPTED

Explanation The configuration file does not contain a session status record. This message will be issued the first time the pool recovery feature is used, or whenever a new configuration file is used.

Action None. It is assumed there is no previous failed session to recover.

CAS014E SESSION UPDATE RSP=#### / ####, NO SESSION RECOVERY ACTIVE FOR THIS SESSION

Explanation An attempt to update the session status record failed. Session recovery will not be active for this daemon instance.

Action Determine the reason for the update failure. If session and pool recovery are required, restart the daemon when the problem is resolved.

CAS015E SESSION STATUS UPDATE RSP ##### / #####

Explanation This message can only occur during normal termination of the daemon. An attempt to update the session status record with termination information failed.

Action Determine the reason for the update failure. The next time the daemon is started it will probably attempt session recovery, but there will be no session to recover. Messages CAS013I or CAS017S may be issued, but can be ignored.

CAS016E SESSION ANCHOR GETMAIN ERROR, NO SESSION RECOVERY ACTIVE FOR THIS SESSION

Explanation The session anchor is a common memory area that saves recovery information for the duration of the session. Session recovery will not be active if the anchor cannot be allocated.

Probable cause is insufficient common memory.

Action Review system initialization parameters and current use of common memory.

CAS017S PREVIOUS SESSION RECOVERY NOT POSSIBLE, SESSION ANCHOR NOT FOUND OR INVALID

Explanation This message appears if the system is restarted after a daemon failure or if the anchor memory area is freed or overwritten by any other task.

The session anchor is a common memory area that saves recovery information for the duration of the session. The configuration file status record holds the address of this anchor. When a session fails that session anchor is preserved in common memory until a new daemon session starts and recovers the failed session.

Action None

CAS018W SESSION RECOVERY COMPLETED

Explanation The daemon detected that a previous daemon session failed. Session and pool recovery was invoked and has completed successfully.

Action None.

CAS019E PREVIOUS SESSION RECOVERY UNSAFE, RESTART AS SOON AS POSSIBLE

Explanation An error has been detected during session and pool recovery. There is probably a memory corruption problem in one of the pools. The session may have been partially recovered.

Action It is probably not safe to continue with the current daemon instance. It should be canceled and restarted. If this message re-occurs, contact your Software AG technical support representative.

CAS020W POOL ##### RECOVERED FOR JOB ##### AT ##### #####

Explanation The daemon detected that a previous daemon session failed. The named pool was recovered.

Action None.

CAS02II Msg-out Msg-rsp Msg-in Msg-segs Cq-Num Cq-Hwm Cq-Full Cq-Post RspPost

Explanation This message is issued when a Daemon DXCF command is issued, to display XCF messaging statistics. See the description of the DXCF command for an explanation of the message content.

Action None.

**CAS022I #####
#####**

Explanation This is the details part of the CAS021I message heading.

Action None.
