

RVCL* - Adabas Review Batch Client Reporting (REVCLRP) Messages

Overview of Messages

RVCL001 | RVCL002 | RVCL003 | RVCL004 | RVCL005 | RVCL006 | RVCL007 |
RVCL008 | RVCL009 | RVCL010 | RVCL011

RVCL001 Review Client Reporting has been {started | stopped}

Explanation Adabas Review client reporting has been started or stopped. (REVEXIT2 has successfully been changed to the requested state: ON or OFF.)

Action No action is required for this informational message.

RVCL002 Review Client Reporting is currently {on | off | unavailable}

Explanation The current status of Adabas Review client reporting is listed in the message.

Action No action is required for this informational message.

RVCL003 Unexpected error while resetting state

Explanation While performing the STATUS function, an error occurred resetting the original state after processing. This is due to a very small window of opportunity where an externally controlled process was altered. An example would be if the Adabas Review hub was terminated during the time when the STATUS call has started but not completed.

Action Retry the operation.

RVCL004 Invalid function code

Explanation An invalid function code was specified in RVCLFUNC. Valid function codes are "ON", "OFF" or "STATUS".

Action Specify a valid function code in RVCLFUNC and try again.

RVCL005 Non-zero response from link routine

Explanation An error condition exists. Output fields RVCLRSP and RVCLRESN will contain the response and reason codes returned by the Adabas link routine, ADALNK.

Note:

These fields were set by ADALNK, not REVCLRP.

Action Examine the response code and reason codes to understand the problem and fix it. If you need assistance, contact your Software AG technical support representative.

RVCL006 Review Client Reporting was already {on | off}

Explanation A request was made to change the state of client reporting, but client reporting was already in that state.

Action Determine whether the request to change the state was requested correctly. If not, correct the request and try again.

RVCL007 REVEXIT2 is not installed

Explanation An attempt to call REVCLRP was made from an application, but the REVEXIT2 link routine is not currently installed. REVEXIT2 is required for client reporting.

Action Contact your Software AG technical support representative for assistance.

RVCL008 Insufficient storage for REVEXIT2

Explanation There is not enough memory available for REVEXIT2 to operate.

Action Provide more storage and try to run the job that calls REVCLRP again.

RVCL009 The hand shake with the Review hub failed

Explanation The Trans-Port service was not able to communicate properly with the Adabas Review hub because the PC number was zero.

Action Contact your Software AG technical support representative; be prepared to provide a dump and protocol information.

RVCL010 The internal Trans-Port mechanism failed

Explanation Attempts to communicate with the Adabas Review hub failed. Output fields REVCLRSP and RVCLRESN will be set with the response and reason codes from REVCLRP. If the response and reason codes are 148/50, then the hub was terminated after client reporting (REVEXIT2) was activated.

Action If the response and reason codes are 148 and 50 (respectively), restart the hub and try again. If the response and reason codes are not 148 and 50, contact your Software AG technical support representative for assistance.

RVCL011 Adabas response 148 was received contacting the hub

Explanation The Adabas Review hub is not available.

Action Start the Adabas Review hub and try again.
