Preface

This documentation describes the functionality of Adabas Manager and introduces the functionality for administering Adabas Linux, UNIX and Windows (LUW) databases. It is organized under the following headings:

Overview Introduces Adabas Manager, describing its high-level purpose and functionality.

1 About this Documentation

| | |
|--|---|
| ▪ Document Conventions | 2 |
| ▪ Online Information and Support | 2 |
| ▪ Data Protection | 3 |

Document Conventions

| Convention | Description |
|----------------|--|
| Bold | Identifies elements on a screen. |
| Monospace font | Identifies service names and locations in the format <code>folder.subfolder.service</code> , APIs, Java classes, methods, properties. |
| <i>Italic</i> | Identifies: Variables for which you must supply values specific to your own situation or environment. New terms the first time they occur in the text. References to other documentation sources. |
| Monospace font | Identifies: Text you must type in. Messages displayed by the system. Program code. |
| { } | Indicates a set of choices from which you must choose one. Type only the information inside the curly braces. Do not type the { } symbols. |
| | Separates two mutually exclusive choices in a syntax line. Type one of these choices. Do not type the symbol. |
| [] | Indicates one or more options. Type only the information inside the square brackets. Do not type the [] symbols. |
| ... | Indicates that you can type multiple options of the same type. Type only the information. Do not type the ellipsis (...). |

Online Information and Support

Software AG Documentation Website

You can find documentation on the Software AG Documentation website at <http://documentation.softwareag.com>. The site requires credentials for Software AG's Product Support site Empower. If you do not have Empower credentials, you must use the TECHcommunity website.

Software AG Empower Product Support Website

If you do not yet have an account for Empower, send an email to empower@softwareag.com with your name, company, and company email address and request an account.

Once you have an account, you can open Support Incidents online via the eService section of Empower at <https://empower.softwareag.com/>.

You can find product information on the Software AG Empower Product Support website at <https://empower.softwareag.com>.

To submit feature/enhancement requests, get information about product availability, and download products, go to [Products](#).

To get information about fixes and to read early warnings, technical papers, and knowledge base articles, go to the [Knowledge Center](#).

If you have any questions, you can find a local or toll-free number for your country in our Global Support Contact Directory at https://empower.softwareag.com/public_directory.asp and give us a call.

Software AG TECHcommunity

You can find documentation and other technical information on the Software AG TECHcommunity website at <http://techcommunity.softwareag.com>. You can:

- Access product documentation, if you have TECHcommunity credentials. If you do not, you will need to register and specify "Documentation" as an area of interest.
- Access articles, code samples, demos, and tutorials.
- Use the online discussion forums, moderated by Software AG professionals, to ask questions, discuss best practices, and learn how other customers are using Software AG technology.
- Link to external websites that discuss open standards and web technology.

Data Protection

Software AG products provide functionality with respect to processing of personal data according to the EU General Data Protection Regulation (GDPR). Where applicable, appropriate steps are documented in the respective administration documentation.

2 Overview

- What is Adabas Manager? 6
- Who will use Adabas Manager? 6

This chapter describes the functionality of Adabas Manager and introduces the functionality for administering Adabas Linux, UNIX and Windows (LUW) databases.

What is Adabas Manager?

Adabas Manager allows users to interactively monitor and change aspects of Adabas databases running on one or multiple Linux, UNIX, and Windows (LUW) hosts.

With Database Manager, users can easily view resource status, display and modify space allocation, and change file and database parameters.

Some of the resource-related tasks that can be performed using Adabas Manager include:

- View and update nucleus parameters;
- Create new databases;
- List available databases, start and stop databases;
- List files in a database and display/administer containers;
- List the file distribution of the database;
- Display high-water marks and buffer pool statistics;
- Display and stop users.

Who will use Adabas Manager?

The success of a database environment depends on central control of database design, implementation, and use. This central control and coordination is the role of the database administrator (DBA).

Database operators may use Adabas Manager to start or stop a database, as well as stopping a user from using a database or a file.

Adabas Manager users need:

- The administrative skill to set up and enforce the standards and procedures for using the database;
- The technical ability to understand the factors governing hardware performance, with considerable knowledge both of the operating system software and the DBMS being used;
- A thorough knowledge of existing and future applications; and
- The skills to produce an efficient database design that meets the application requirements.

Users using Adabas Manager to monitor and change aspects of an Adabas database while an Adabas session is active should have in-depth understanding of the database operation and the service it provides to the organization.
