Glossary

C

Computer	In the context of archiving, a Computer represents a single operating system image (this may be a virtual machine).
Configuration File	The Configuration File is an Adabas file containing the configuration definitions for your site. The same Configuration File may also be shared by other products.

D

Daemon	A Daemon manages the control of one or more services such as the Data Archiving for Adabas Service. Daemons run collaboratively within a network infrastructure referred to as a Group.
--------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

G

Group	An Adabas System Coordinator Group defines a logical network of computers where Daemons run.
-------	----------------------------------------------------------------------------------------------

P

Perspective	<p>The Perspective is a way of specifying the Configuration File that the SMH UI is to display. The Perspective may be set to select a Configuration File in one of three ways:</p> <ol style="list-style-type: none">1. Direct to a specific Configuration File, either local to the UI Computer or via Software AG's Network.2. To the default Configuration File of another Adabas System Coordinator hosted on a different computer to the UI, by simply specifying the hostname and Daemon.
-------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

3. To a specific Configuration File on a different computer to the UI by using the Adabas System Coordinator hosted on that machine and specifying the hostname, Daemon and DB/FNR.

S

SMH

System Management Hub, a Software AG UI for the management of multiple applications.
