

ADABAS SQL SERVER - CHANGES AFTER RELEASE VERSION 1.4.3

Compatibility

Adabas SQL Server's Advanced Interactive Facility was introduced to allow ad-hoc SQL queries to Adabas. Due to technical reasons the support of this function must be dropped with Natural 4.1 or above.

As a work-around, ESQBIF can be used either interactively under TSO on z/OS or in batch mode on VSE and z/OS.

Adabas SQL Gateway, the successor of the Adabas SQL Server, already offers a more comprehensive tool for ad-hoc access.
