1 Release Notes

Adabas Manager provides browser-based administration and monitoring of Adabas databases on Linux, Windows and mainframe platforms.

This document provides information about the current version of Adabas Manager. It is organized as follows:

General	General description and features of Adabas Manager.
New and Modified Features in Version 9.4	New/modified features in Version 9.4
Dropped Features	No longer part of the software.
Documentation	Notes about the Adabas Manager documentation.

2 About this Documentation

- Document Conventions 4
- Online Information and Support 4
- Data Protection 5

Document Conventions

Convention	Description
Bold	Identifies elements on a screen.
`Monospace font`	Identifies service names and locations in the format *`folder.subfolder.service`*, APIs, Java classes, methods, properties.
`Italic`	Identifies: Variables for which you must supply values specific to your own situation or environment. New terms the first time they occur in the text. References to other documentation sources.
`Monospace font`	Identifies: Text you must type in. Messages displayed by the system. Program code.
{ }	Indicates a set of choices from which you must choose one. Type only the information inside the curly braces. Do not type the { } symbols.
|	Separates two mutually exclusive choices in a syntax line. Type one of these choices. Do not type the | symbol.
[ ]	Indicates one or more options. Type only the information inside the square brackets. Do not type the [ ] symbols.
...	Indicates that you can type multiple options of the same type. Type only the information. Do not type the ellipsis (...).

Online Information and Support

Product Documentation

You can find the product documentation on our documentation website at **https://documentation.softwareag.com**.

Product Training

You can find helpful product training material on our Learning Portal at **https://learn.softwareag.com**.

Tech Community

You can collaborate with Software GmbH experts on our Tech Community website at **https://techcommunity.softwareag.com**. From here you can, for example:

- Browse through our vast knowledge base.
- Ask questions and find answers in our discussion forums.
- Get the latest Software GmbH news and announcements.
- Explore our communities.
- Go to our public GitHub and Docker repositories at **https://github.com/softwareag** and **https://hub.docker.com/publishers/softwareag** and discover additional Software GmbH resources.

Product Support

Support for Software GmbH products is provided to licensed customers via our Empower Portal at **https://empower.softwareag.com**. Many services on this portal require that you have an account. If you do not yet have one, you can request it at **https://empower.softwareag.com/register**. Once you have an account, you can, for example:

- Download products, updates and fixes.
- Search the Knowledge Center for technical information and tips.
- Subscribe to early warnings and critical alerts.
- Open and update support incidents.
- Add product feature requests.

Data Protection

Software AG products provide functionality with respect to processing of personal data according to the EU General Data Protection Regulation (GDPR). Where applicable, appropriate steps are documented in the respective administration documentation.

3 General

Adabas Manager provides browser-based administration and monitoring of Adabas databases on Linux, Windows and mainframe platforms.

It can be used to administer Adabas databases on remote host machines, in addition to Adabas databases on the local machine. Common administration tasks include listing databases and files, starting/stopping and creating databases, viewing and modifying database parameters, managing database containers, and viewing information about high water marks and buffer pools.

All of the major features of previous versions are supported; exceptions are described below.

4 New and Modified Features in Version 9.4

- New User Queue (UQ) List Monitoring Dashboard for Adabas on Open System 10
- New Event Replicator Target Adapter Administration 10
- New Button to Dynamically Enable or Disable ADATCP 10

New User Queue (UQ) List Monitoring Dashboard for Adabas on Open System

A new "User Queue Monitoring" screen is now available to help you monitor Adabas on open systems. For more detailed information, refer to the following section:

Using Adabas Manager > Database Administration on Linux and Windows

New Event Replicator Target Adapter Administration

You can now administer Event Replicator Target Adapters directly within Adabas Manager. All functions previously available in the standalone Target Adapter Administration tool have been integrated into Adabas Manager. This includes tasks such as setting up Event Replicator Target Adapter definitions for Source, Target, and Processing Options.

Additionally, various logs (e.g., `sqlrep`, `art-rest`, and `catalina`) have been consolidated and grouped on a single screen for easier analysis and management. For more details, refer to the following section: *Using Adabas Manager > Event Replicator Target Adapter*

New Button to Dynamically Enable or Disable ADATCP

It is now possible to enable or disable the ADATCP connection while an Adabas database on Open Systems is online and ADATCP is set in the nucleus parameters. For more detailed information, refer to *Using Adabas Manager > Database Administration on Linux and Windows > Administering Databases > Database Overview*.

5 Dropped Features

There are no dropped features in this version of Adabas Manager.

6 Documentation

Due to last-minute documentation updates, it may be possible that the Adabas Manager documentation or the online help that you can invoke directly from the product does not yet contain the latest information. The most up-to-date Adabas Manager documentation can always be found on the Documentation Website at https://documentation.softwareag.com/.
