Support for virtualization software is only applicable when used in conjunction with one of the corresponding supported x86 operating systems as guests  
Users must follow VMware best practices for guest operating systems. In particular, users of Linux guests should be aware of VMware KB Article: 1006427  
[http://kb.vmware.com/selfservice/microsites/search.do?language=en\\_US&cmd=displayKC&externalId=1006427](http://kb.vmware.com/selfservice/microsites/search.do?language=en_US&cmd=displayKC&externalId=1006427)

Technical support will provide 'best effort' assistance with other application virtualization software environments.  
Product deficiency bugs can only be logged if the problem can be demonstrated in a non-virtualization environment
