Support for virtualization software is only applicable when used in conjunction with one of the corresponding supported x86 operating systems as guests

Users must follow VMware best practices for guest operating systems. In particular, users of Linux guests should be aware of VMware KB Article: 1006427

http://kb.vmware.com/selfservice/microsites/search.do?language=en_US&cmd=displayKC&externalId=1006427

Technical support will provide 'best effort' assistance with other application virtualization software environments

Product deficiency bugs can only be logged if the problem can be demonstrated in a non-virtualization environment
