ARIS 9.8 SR8
May 2017

For migrating your ARIS report scripts from ARIS 7 to ARIS 9, please refer to ARIS Report Script Changes from ARIS 7.2.4 to ARIS 9.8 SR4. This document outlines changes between ARIS 9.8 SR4 and 9.8 SR6. All changes from ARIS 9.8 SR6 to ARIS 9.8 SR7 and ARIS 9.8 SR7 to ARIS 9.8 SR8 are listed in this document as well.

33 Useful report hints

This document describes the report script language differences between:

- *ARIS 9.8 SR7 and 9.8 SR8*
- *ARIS 9.8 SR6 and 9.8 SR7*
- *ARIS 9.8 SR4 and 9.8 SR6*
- *ARIS 7.2.4 and 9.8 SR4*

In most cases, the removed methods can still be called, but they no longer have any function and should be removed/replaced from/in the script.

The deprecated methods should not be used any longer. They have been replaced by functions that are more suitable in ARIS 9.

For a description of the added methods please refer to the online help for ARIS Script.

Some attributes that exist for the most items, such as creator, time of creation, last modifier and time of last modification, are now directly accessible via methods as item properties.

Please note, the report scripts themselves are no longer on the server's file system. Instead they are stored in a database. This is so all script import/export/delete operations have only an effect on the (system) database content and do not touch the file system.

New constants:

Additionally, there are new attribute/model/cxn/lane/symbol type constants in ARIS metamodel.

Since the ARIS report now additionally supports ARCM reports, there are new classes and constants especially for ARCM reports.

The ARCM constants can be found in the help:

Database users are no longer stored in the ARIS database, but in the UserManagement (UMC). The corresponding report methods consequently manage the users in the UMC, so they still work „as expected“.				
The term „AssignedUser“ is used for a user having the right to (at least) view the database content. Non-assigned user do not even see the database in the explorer.

Useful report hints

1. Use Context.setProperty("model-as-emf", true) once (before writing model graphics to the report)

- Makes PDF model graphics more brilliant
- Maximum scalability
- Smaller PDF files
- Drawback: up to 10x time to create the image (due to a bug in an external library that will hopefully be fixed soon)

2. Open other databases using ArisData.openDatabase()

- You can log into the same DB as another user or with another filter
- Do not forget to close them afterwards!

3. Save memory by using Database.clearCaches()

- Use it where it makes sense (after using many objects that are not needed any more afterwards)

4. Clean up after an error! especially

- After openDatabase commands
- Handle output file content in case of an error

5. Always use try / catch for error handling. You can report detailed error logs to the user using this code:

```
try {
    your code which might throw exceptions
}
catch(ex) {
    var line = ex.lineNumber
    var message = ex.message
    var filename = ex.fileName
    var exJava = ex.javaException
    if(exJava!=null) {
        var aStackTrace = exJava.getStackTrace()
        for(var iST=0; iST<aStackTrace.length; iST++) {
            message = message + "\n" + aStackTrace[iST].toString()
        }
    }
    Dialogs.MsgBox("Exception in file "+filename+", line "+line+":\n"+message )
}
```
