## Support level

### Download restrictions

ARIS products can be downloaded from the ARIS Download Center at <http://aris.softwareag.com>. However, ARIS releases earlier than version 9.6 service release 1 (9.6.0.3) can be downloaded only from a restricted download area. If you want to download such ARIS releases, you need to get access data from Global Support ARIS. Please contact our support either via Empower/e-ticket or via hotline +800 ARIS HELP.

### Definition of maintenance policy

Software AG’s Maintenance Policy is divided into milestones (gray diamonds) and stages (colored boxes).

### Restricted availability

When Software AG has completed the development, QA, and documentation cycles for a new release, we often make the software available to a limited group. We call this milestone First Customer Ship (FCS), and it begins the restricted availability period. The intent of this period is to have select customers begin using the software while we ready Software AG staff and partners for General Availability (GA). The software that we ship during this stage is not beta; all new features are complete and have been thoroughly tested and documented. Specific individuals throughout Software AG who have been trained on the platform provide support for customers during the restricted availability period.

As a result of doing additional platform or performance testing during the restricted availability period, we may choose to ship fixes or service packs to resolve any issues uncovered. We require that customers stay current by upgrading to a current service pack or fix when made available during this period.

### Standard maintenance

When all relevant Software AG personnel sign off on the readiness of the software, it is released as GA for all contracted customers. At this time, the product officially enters the stage called standard maintenance. During standard maintenance, our global support and research and development staff fully support GA releases by delivering defined product support services and minor, service pack or fix releases, as defined in this guide, that address customers’ needs. When a GA release is delivered, Software AG provides standard maintenance, typically for a minimum of 36 months. Software AG may require that, in order to address a problem encountered with a version of the software in standard maintenance, the customer first install the most recent service pack.

### **Sustained support—after EOM**

Sustained support is for customers who find their implementations in a stable, static environment with little need for change. The sustained support period is minimally 12 months in duration. Customers running products beyond End of Maintenance (EOM) will receive Web-based and telephone assistance from Software AG Global Support, but no new fixes will be created for the software. All previous fixes are downloadable via the Software AG extranet site. Sustained support is covered by the customer's maintenance fees. Customers who require support for more active environments are encouraged to upgrade to the latest GA release.

### **Self service—after EOSS**

At the End of Sustained Support (EOSS), Software AG provides unlimited electronic self service for the products. Customers may access hints and fixes from our Software AG extranet site but are not permitted to open new support requests. Electronic self service is covered by the customer's maintenance fees. Customers who require support for more active environments are encouraged to upgrade to the latest GA release.

### **End of maintenance extensions**

An End of Maintenance Extension (EME) can be provided at additional cost on many Software AG products, including ARIS 9 or ARIS 10 for a maximum of four years after the version's EOM date.

An EME is offered in two phases: phase 1, covering years 1 and 2 post EOM and phase 2, covering years 3 and 4 post EOM. The EME fee structure differs between the phases. To request an EME, customers must submit a detailed technical questionnaire to Software AG. Subject to internal approval from Global Support and R&D, Software AG will provide a quote and separate addendum to enact a version specific EME agreement.

It may not always be possible to offer an EME for a particular environment or exclusions, or restrictions may need to be included.

Software AG is offering EME contracts for ARIS under the following conditions:

- The EME is priced in addition to the customer's current standard maintenance and support fees
- Since bug fixes will be delivered only for newest Service Release (SR) of an ARIS version, customers have to migrate to this newest SR
- Environment freeze: the customer has to stay on current platform to run ARIS. (no additional platforms will be released and supported)

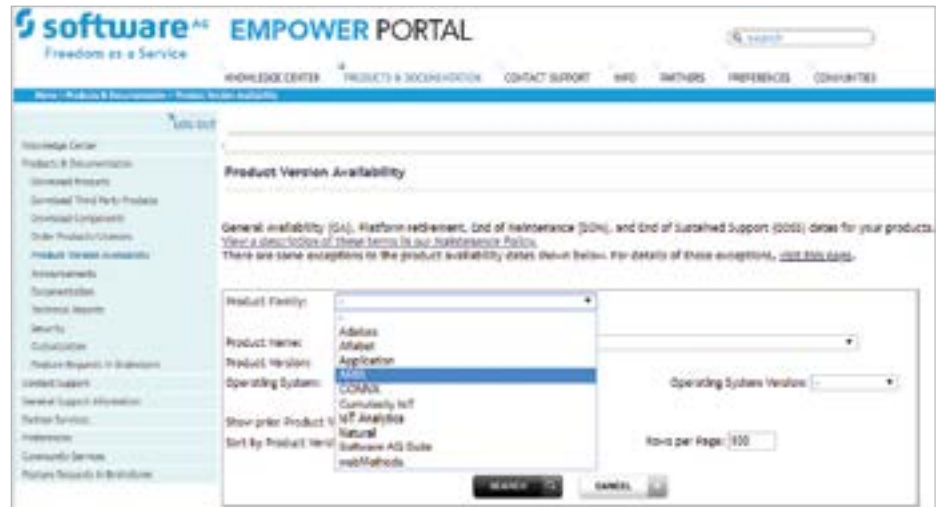

## Empower—do it yourself

Log into Empower and have a look at your start page. Navigate to **General Support Information**:

Click on **Product Lifecycle & Maintenance**, then on **Product Version Availability**, and select **ARIS** in the drop-down list **Product Family**, then click **Search**:

Scroll down the list to your ARIS version, or enter your ARIS version number in the drop-down list **Product Version** and click **Search**.

Restrict the search by specifying **Product Family**, **Product Name**, **Product Version**. Furthermore you can select the **Operating System** and **Operating System Version** you are looking for.

Click on **Search**.  
(Your matches will be displayed below.)

**Product Version Availability**

General availability (GA), Platform retirement, End of maintenance (EOM), and End of Sustained Support (EOSS) dates for your products. View a description of these terms in our [Maintenance Policy](#). There are some exceptions to the product availability dates shown below. For details of these exceptions, [visit this page](#).
