

# ARIS 10 SR 22

## New Features Overview

ARIS 10 SR22 feature	Feature description
<b>ARIS Enterprise</b>	
<b>ARIS Enterprise – Admin</b>	
Schedule service release upgrades within ARIS and ARIS Process Mining	In ARIS Enterprise SaaS, Server Administrators can now schedule upgrades for their environments in ARIS. Server Administrators can check and immediately book available time slots, increasing the efficiency of the upgrade process.
<b>ARIS Enterprise – Designer</b>	
New ARIS Repository search: add columns for sorting	ARIS Designers and Admins can maintain content more easily using the ARIS model repository search. As a Designer or Admin you can now add additional property columns to the table of the search result, order these columns, and sort the table based on column values.
<b>ARIS Enterprise – Server/Enterprise Server</b>	
Subfolders in ARIS Document Storage automatically take the privileges of the parent folder	A newly added folder in the ARIS Document Storage will automatically take the privileges of the parent folder.
<b>ARIS Enterprise – Viewer</b>	
Mandatory attribute/content checks at fact sheet	The WYSIWYG editor has the option to always show (or hide) empty properties to end users. This can be used to show mandatory attributes to end users.
Update confirmation panel to fit new fact sheet redesigns	Updated and redesigned confirmation panel to sign off that you have read and understood the newly published content(s) in order to fit the new content overview pages in the portal.
New Portal search: Make it the new standard (after pilot phase)	All consumers of content have a new search UI which finds relevant content across all published ARIS sources, including related and unrelated documents that they have access to. No longer need to interpret why something was found and what it is.
SSC portal configuration with WYSIWYG approach	The new and redesigned experience of consuming content in the portal features an intuitive drag & drop editor. You can either use it to adjust the pre-configured overview fact sheets or to create new content overviews in a visual manner.
Add “Clickable” option to first column of Tables for Self-Service.	Using WYSIWYG editor you may now easily activate or deactivate if a property or the first column of the table is clickable or not. Also, we changed the standard behaviour for the first column of the table to avoid opening object factsheets unintentionally.
Update/consolidate all fact sheets to new design	ARIS offers redesigned content overviews (overview fact sheets) with a fresh look and feel, and with improved navigation patterns.
New Repository Search field must not depend on portal customizing	Fixes the problem that the new Repository Search disappeared when activating the new Portal Search for an environment with portal customizing. The new Portal Search now resides in the Global Configuration.

## New Features Overview

ARIS 10 SR22 feature	Feature description
<b>ARIS Enterprise – Viewer Pro</b>	
Show thresholds/ max/ min/ avg/ totals as lines in a chart	Show calculated fields like thresholds, minimum, maximum on the chart for clutter-free visualization.
Chart visualization for redesigned fact sheets (React)	Improve the dashboard widgets to accommodate the new redesigned fact sheets and smaller sizes in WYSIWYG editor.
<b>ARIS Enterprise – 3<sup>rd</sup> Party Integration</b>	
Increased number of result items for ARIS Rest API	<p>For databases containing a large number of models and objects, the number of items available via API access is no longer limited to 5,000.</p> <p>Maximum number of model items will be increased to 10,000 (and page size from 500 to 1,000).</p> <p>Maximum number of object items will be increased to 100,000 (and page size from 500 to 10,000).</p>
<b>ARIS Enterprise – Extension: Risk &amp; Compliance</b>	
Issue Management – ARIS suite integration	Improved integration of Issue Management into the ARIS Portal, potentially addressing all ARIS user types without requiring navigation into specific Risk and Compliance extension-based pages. This will improve acceptance and user journeys.
ARIS Risk & Compliance Management now supports multi-tenancy	The ARIS Risk & Compliance extension can now be used in multi-tenancy scenarios. This is key for further usage in Saas/Cloud and shared environments. This also includes confirmation management.
Enable adding workflow-object lists to portal items	Risk and Compliance-relevant operational items (including control tests, surveys and incidents) are made available in the ARIS Portal for ARIS users having the respective GRC role (manager, auditor) without the need to navigate via a long click path. This will make the user journey less complex and supports the integrated impression for 1 <sup>st</sup> line of defense being at the same timeline of business.
Import control execution documentation via API	Documentation of control executions can come from external IT systems and does not necessarily need human interaction. To support this, an API-based import is offered to fill in that information into the Risk and Compliance extension automatically.
<b>ARIS Enterprise – Extension: Robotic Process Automation (RPA)</b>	
New performance enhancements for ARIS task mining/Robotic Process Discovery	A deployment of Process Discovery can now support 300 simultaneous bots with a total of 5,000 user actions in an 8-hour period. Added support for Windows 11. Added support for .NET 6 in the PDDR.
New features and improvements for ARIS RPA	ARIS RPA brings new features and improvements to the security, stability, and performance of the RPA platform. This includes a newly introduced API as well as an increased number of bots that can be maintained by one server.
<b>ARIS App Generator</b>	
Enhancements for ARIS App Generator	<p>Multiple maturity features added to the ARIS APP Generator, including enhanced technical documentation as well as an installer that simplifies the installation of the App Generator to an existing ARIS Enterprise on-prem installation. In addition, some improvements of managing Excel tasks, especially formula calculation, multi-files management and writing to a template have been added.</p> <p>The ARIS App Generator is delivered and sold by Software AG partner iMendos.</p>

## New Features Overview

ARIS 10 SR22 feature	Feature description
<b>ARIS Process Mining SaaS</b>	
Advanced process model overlay and augmentation	An advanced model overlay feature was introduced. Augment Process Mining-related KPIs, activities, and edges on an assigned BPMN model to gain deeper insights into your business processes and drive better outcomes for your process analysis projects.
Gallery with pre-built accelerators	The new Gallery helps you to achieve faster time-to-value with your Process Mining investments. It provides you with a range of pre-defined accelerators that can be installed directly into your tenant, giving you the tools you need to achieve your business goals in record time.
Delta Lake Extraction via Databricks	The new Delta Lake Extraction via Databricks Integration enables you to seamlessly extract data from your Delta Lake storage and use it for your Process Mining analyses. Integrating via JDBC with Databricks, a leading data engineering platform, the new feature allows for seamless data extraction out of Delta Lakes.
Fine-grained filters on analysis, app and component level	Enhance your analysis with the power of fine-grained filters! With this powerful feature, you'll have more control over your Process Mining analyses than ever before. It allows you to zoom in on specific processes by defining filters on analysis, app or component level. By defining component-based filters, you'll have more flexibility to analyze your data, allowing you to easily filter different app components by time period, business unit, or any other relevant criteria, e. g., for benchmarking purposes.
Process governance trigger for Insight-to-Action	The enhanced Insight-to-Action capability enables you to use insight triggers to run ARIS workflows using process governance workflows. You can automatically trigger ARIS workflows based on Process Mining insights.
Knowledge bot for smooth user onboarding	The new Knowledge bot is designed to improve the onboarding process for new users, making it easier to get up to speed and start driving quicker business outcomes.
Advanced user rights management	The new feature offers enhanced user rights management at Project, Analysis, and Data Set levels, ensuring only authorized users have access to your organizational data.
Infinite scrolling mode for table component	With our improved table component, you can handle high volumes of data rows on demand, thanks to the innovative infinite scrolling mode.
New functional right – Data set creator	With the new function right "Data set creator," only authorized users have the possibility to create new data sets in your Process Mining tenant.

### ABOUT SOFTWARE AG

Software AG simplifies the connected world. Founded in 1969, it helps deliver the experiences that employees, partners and customers now expect. Its technology creates the digital backbone that integrates applications, devices, data and clouds; empowers streamlined processes; and connects "things" like sensors, devices and machines. It helps 10,000+ organizations to become a truly connected enterprise and make smarter decisions, faster. The company has more than 5,000 employees across more than 70 countries and annual revenue of over €950 million.
