Policy(237) (OT_POLICY)	concerns	is involved in(763) (CT_CONC_3)	Function(22) (OT_FUNC)	Unique
Product/Service(153) (OT_PERF)	is consumed by	consumes(443) (CT_IS_USED_BY_1)	Function(22) (OT_FUNC)	Unique
Product/Service(153) (OT_PERF)	is input for	has as input(49) (CT_IS_INP_FOR)	Function(22) (OT_FUNC)	Unique
Product/Service(153) (OT_PERF)	is used by	uses(441) (CT_IS_USED_BY)	Function(22) (OT_FUNC)	Unique
Requirement(387) (OT_REQUIREMENT)	refers to	is referred to by(728) (CT_REFS_TO_2)	Function(22) (OT_FUNC)	Unique
Risk(159) (OT_RISK)	occurs at	has(507) (CT_OCCUR)	Function(22) (OT_FUNC)	Unique
Role(78) (OT_PERS_TYPE)	accepts	is accepted by(435) (CT_AGREES)	Function(22) (OT_FUNC)	Unique

Source object type	Relationship type (active)	Relationship type (passive)	Target object type	Possible number of connections
Role(78) (OT_PERS_TYPE)	carries out	is carried out by(218) (CT_EXEC_2)	Function(22) (OT_FUNC)	Unique
Role(78) (OT_PERS_TYPE)	contributes to	is worked on by collaboration of(324) (CT_CONTR_TO_2)	Function(22) (OT_FUNC)	Unique
Role(78) (OT_PERS_TYPE)	decides on	is decided by(323) (CT_DECD_ON)	Function(22) (OT_FUNC)	Unique
Role(78) (OT_PERS_TYPE)	has consulting role in	is supported by consulting role of(358) (CT_HAS_CONSULT_ROLE_IN_2)	Function(22) (OT_FUNC)	Unique
Role(78) (OT_PERS_TYPE)	is responsible (IT responsibility) for	is under IT responsibility of(219) (CT_IS_DP_RESP_2)	Function(22) (OT_FUNC)	Unique
Role(78) (OT_PERS_TYPE)	is technically responsible for	is under technical responsibility of(220) (CT_IS_TECH_RESP_3)	Function(22) (OT_FUNC)	Unique
Role(78) (OT_PERS_TYPE)	must be informed about	result is forwarded to(326) (CT_MUST_BE_INFO_ABT_2)	Function(22) (OT_FUNC)	Unique
Role(78) (OT_PERS_TYPE)	must be informed on cancellation	sends information on cancellation to(352) (CT_MUST_BE_INFO_ON_CNC_2)	Function(22) (OT_FUNC)	Unique

Source object type	Relationship type (active)	Relationship type (passive)	Target object type	Possible number of connections
Role(78) (OT_PERS_TYPE)	must inform about result of	result is forwarded by(325) (CT_MUST_INFO_AB_T_RES_OF)	Function(22) (OT_FUNC)	Unique
Service type(294) (OT_FUNC_CLUSTER)	supports	is supported by(221) (CT_CAN_SUPP_1)	Function(22) (OT_FUNC)	Unique
Success factor(108) (OT_CRIT_FACT)	is success factor for	has success factor(256) (CT_IS_CRIT_FACT_FOR)	Function(22) (OT_FUNC)	Unique
Task(137) (OT_FUNC_INST)	refers to	is referred to by(728) (CT_REFS_TO_2)	Function(22) (OT_FUNC)	Unique
Technical term(58) (OT_TECH_TRM)	is input for	has as input(49) (CT_IS_INP_FOR)	Function(22) (OT_FUNC)	Unique

### 3.2.173 Whiteboard

Source object type	Relationship type (active)	Relationship type (passive)	Target object type	Possible number of connections
Function(22) (OT_FUNC)	is measured by	measures(486) (CT_MEASURED_BY)	KPI instance(244) (OT_KPI)	Unique

### 3.2.174 Work breakdown structure

Source object type	Relationship type (active)	Relationship type (passive)	Target object type	Possible number of connections
Task(137) (OT_FUNC_INST)	depends on	has dependency(748) (CT_DEPENDS_ON_2)	Task(137) (OT_FUNC_INST)	Unique
Task(137) (OT_FUNC_INST)	is of type	determines type of(169) (CT_IS_OF_TYPE_3)	Function(22) (OT_FUNC)	Unique
Task(137) (OT_FUNC_INST)	is process-oriented superior	is process-oriented subordinate(39) (CT_IS_PRCS_ORNT_SUPER)	Task(137) (OT_FUNC_INST)	Unique
Task(137) (OT_FUNC_INST)	realizes	is realized by(712) (CT_SOA_REALIZES)	Requirement(387) (OT_REQUIREMENT)	Unique

### 3.2.175 XML model

Source object type	Relationship type (active)	Relationship type (passive)	Target object type	Possible number of connections
Element(381) (OT_TRANSFORM_XML_ELEM)	contains	belongs to(718) (CT_MOD_TRANSFORM_XML_CONTAINS)	Element(381) (OT_TRANSFORM_XML_ELEM)	Unique
Element(381) (OT_TRANSFORM_XML_ELEM)	has	is assigned to(121) (CT_HAS_2)	Attribute(382) (OT_TRANSFORM_XML_ATTR)	Unique

## 3.3 ARIS object types

### 3.3.1 ARIS objects

**Definition** Specifies an executable expression that leads to a change of the model state. Actions can be realized by sending a message to an object, changing an attribute value of an object, or modifying a relationship between instances.

**Symbol(s)** 

**Definition** Represents a specialization of the state machine, which is used to visualize control and object flows in the form of an activity diagram.

**Symbol(s)** 

**Definition** An actor is an object that activates a data flow by creating or consuming data values. It thus represents the source or sink of the data flow and is bound to its input and output.

**Symbol(s)** 

**Definition** Indicates an answer option for a question in an option set. An answer option can be assigned to different option sets.

**Symbol(s)** 

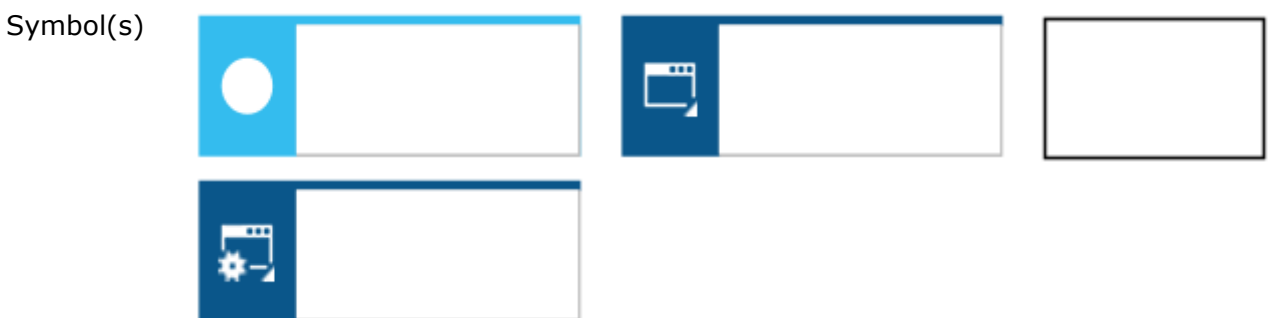

**Definition** An application collaboration represents an aggregate of two or more application components that work together to perform collective application behavior.

**Definition** An application system is an individual specimen of an application system type. A single application system can be uniquely identified by the license number, for example. Multiple application systems (individual licenses) of one application system type may be used within a company.

**Definition** Similar application system types can be combined to form an application system class. The similarity can be based on different classification criteria. Thus, an application system type can be assigned to multiple application system classes.

Definition An application system type typifies individual application systems that are based on precisely the same technology.

Symbol(s)

Definition Structural element for managing various IT component types.

Definition Describes how a parameter value for a call of an action is determined.

Definition An artifact represents a physical unit required or created during the software development process. Examples of artifacts are source texts, programs, and libraries.

Definition No help text is available for this object type.

Definition An association is a group of links that are identical in terms of their structure and semantics.

Definition Represents an association that has the properties of a class.

Definition An association instance is an occurrence of an association and is used to represent links between object instances.

Definition An association role is a role a participant assumes in a collaboration. This role provides a restricted view of the underlying association as it contains only those characteristics of the association that are required within the scope of the collaboration. The assignment to the collaboration is realized via the ElementOwnership relationship.

**Definition** An assumption is a proposition based on assumed facts that have not yet been fully validated due to external constraints. For example, it may be assumed that an existing application meets a given range of functional requirements even though these requirements have not yet been validated individually.

**Definition** In the relations diagram, relations and attributes are used to describe logical database schemas. An attribute describes a property of the relation. Thus, the relation is formally a subset of the Cartesian product of the value ranges of the relation's attributes.

**Definition** An attribute represents an attribute of a model item that belongs to the source or target structure of a transformation pattern.

**Definition** An attribute represents a characteristic of an element in an XML document.

Definition Placeholder in an instance for recording an attribute value.

Symbol(s)

Definition Specifies a characteristic of the element described and indicates the data type and the default value of the attribute value.

Symbol(s)

Definition An attribute type group represents a group of ERM attributes of an entity type that are closely related semantically. For example, ERM attributes of an entity type that, in their entirety, form a secondary key can be combined to form an attribute type group.

Symbol(s)

Definition The Authorization condition object type can be found in the EPC or PCD, for example. It defines prerequisites that restrict an organizational units' competence to act. This means that the access to a function granted to a person is subject to various conditions.

Symbol(s)

Definition Defines a set of properties for all ARIS elements.

Definition The Bitmap object type refers to graphics that are integrated into the current screen. The name of this kind of object should allow conclusions to be drawn regarding the nature of the bitmap. The path to the required bitmap is specified in the Bitmap path attribute.

Definition Breaks are object types of shift calendars and define the time within a shift when no work is performed. The start and end times of breaks must lie within the defined shift.

Definition A business object is a complex business management object that can be parameterized in order to support different business processes.

**Definition** Business rules describe organizational constraints, policies, and procedures. Their implementation aims at realizing corporate strategies and business objectives and at ensuring compliance with internal and external (e.g., statutory) regulations. Business rules are formulated in natural language. To test and execute business rules in a rule engine, it is necessary to formally describe them, for example, by using a well-defined vocabulary. For this reason, business rule objects can be assigned models that describe them in greater detail.

**Definition** A business segment is a part of the current or potential market of a company. It is defined by the customer group whose needs are met in this market segment and by the product or service that satisfies those needs. Within a business segment, individual competitive advantages can be established.

Definition A button is a screen element that can be used to execute a command.

Symbol(s)

Definition A calendar event represents a point in time or a time span that is scheduled in a calendar and can occur once or repeatedly according to a given pattern.

Symbol(s)

Definition A capability (formerly IS function) describes a generic IT resource that supports a function within a process.

Symbol(s)

Definition A capability configuration is a combination of organizational aspects (with their competencies) and equipment that supports performance. It is a physical asset or organization configured to provide a capability and must be guided by principles which may take the form of <<Standard>> or <<OperationalConstraint>> stereotypes.

Symbol(s)

**Definition** A group of objects with similar properties and common relationships is combined to form a class. Classes represent the basic structures of the area of application to be modeled.

**Definition** The classification criterion specifies the criteria according to which the objects to be examined are to be combined.

**Definition** A classifier role is a role a participant assumes in a collaboration. This role provides a restricted view of the underlying classifier as it contains only those characteristics of the classifier that are required within the scope of the collaboration. The assignment to the collaboration is realized via the ElementOwnership relationship.

**Definition** Designates a classifier instance that is in a specific state.

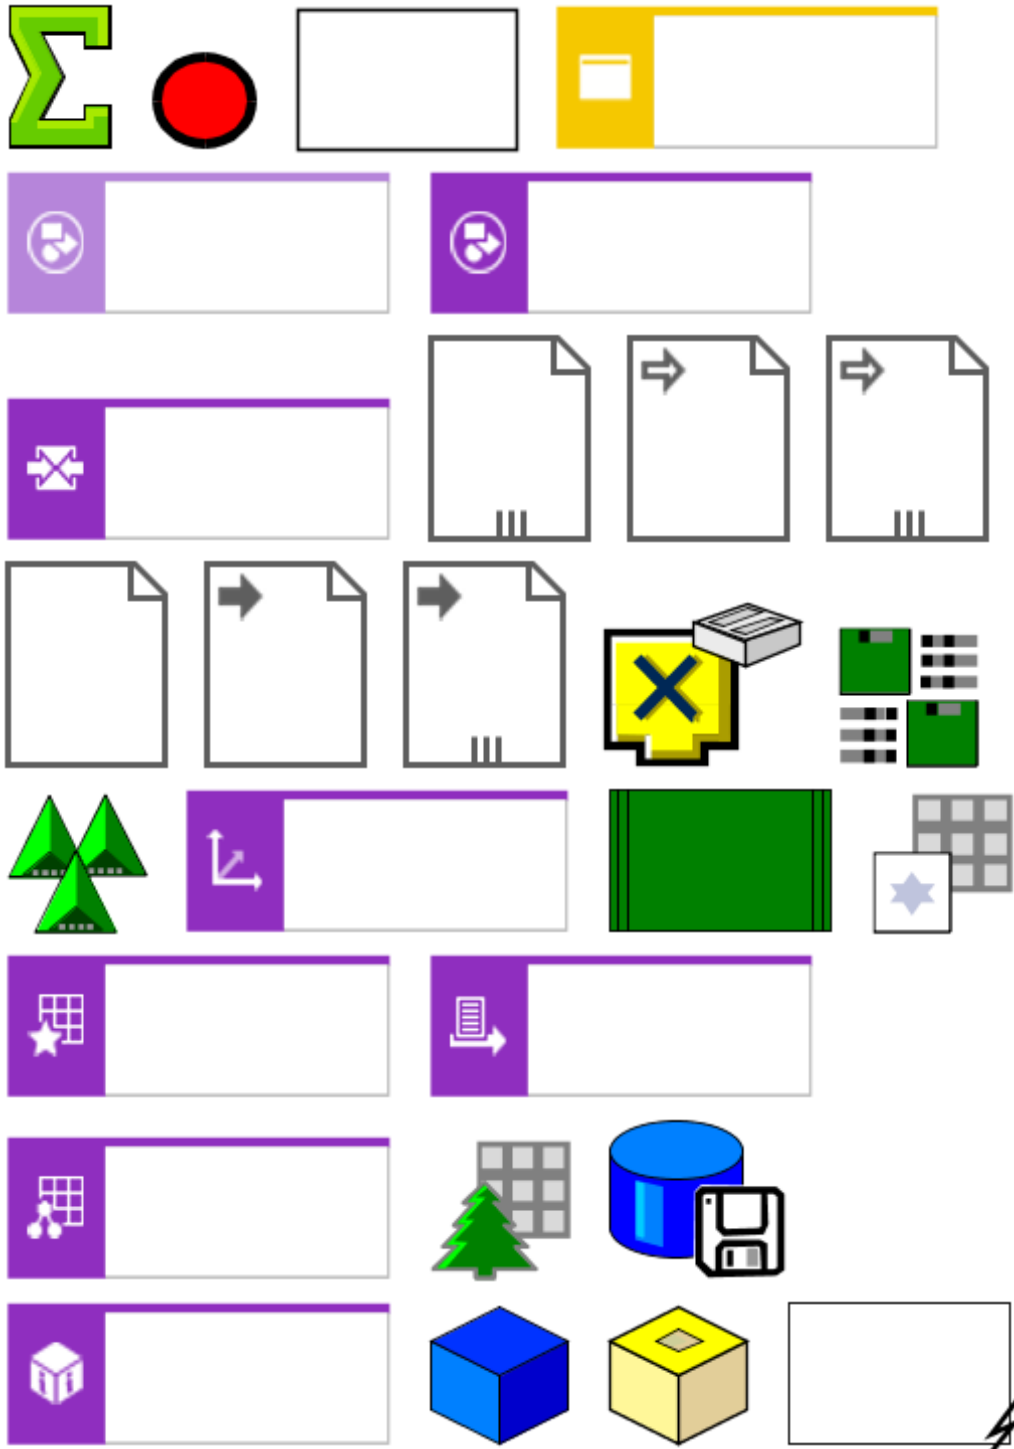

**Definition** A cluster instance is an instantiation of the Cluster/Data model object. It represents a logical view of multiple data objects or structures.

**Symbol(s)**

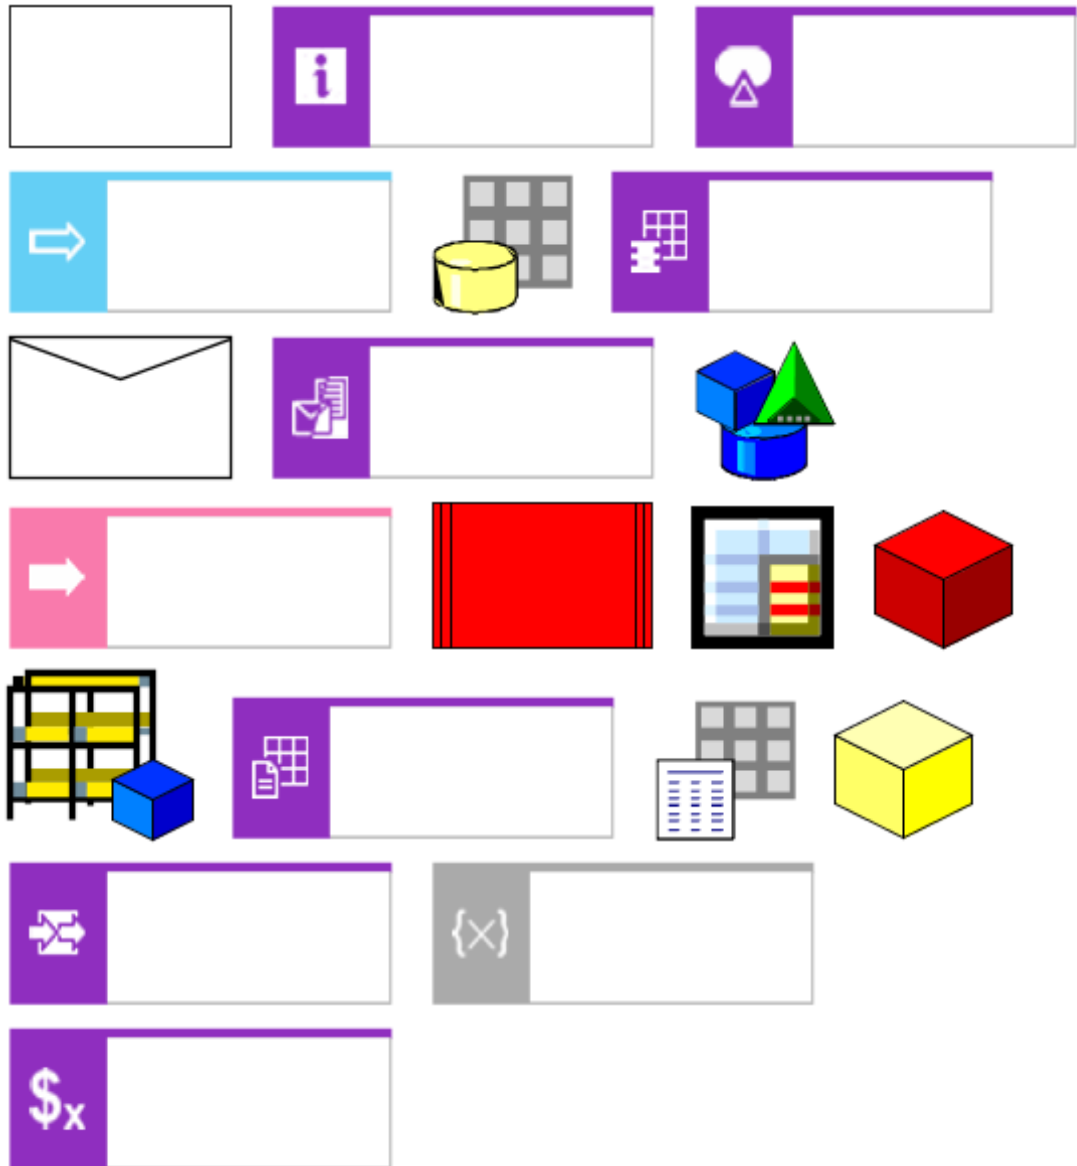

Definition The Cluster/Data model object type has its origin in semantic data modeling with entity relationship models. In that context, clusters are used to represent views of one or more entity types and relationship types. Clusters can also be used to represent business objects (such as order, customer ID, etc.) at the design level, for example as input and output in process models. In the MDA specification of the OMG, the design level is referred to as the CIM (Computation Independent Model).

Symbol(s)

**Definition** A collaboration describes how an operation or a classifier (e.g., a use case) is realized in a specific manner by using classifiers and associations.

**Symbol(s)**

**Definition** Designates a set of instances that collaborate in performing a particular task specified by the collaboration of this element.

**Definition** In the screen diagram it is possible to structurally divide the interface into areas. The resulting vertical divisions are referred to as columns.

**Definition** The Combo box screen element enables the user to select entries from a list and to enter text directly. If the Field type attribute is used, the Standard combo box, Drop-list combo box, and Drop-down combo box representation forms are available for selection.

**Definition** Button, link, or icon invoking an action by asynchronous request.

**Definition** The Communication object type is an essential part of the communications diagram. It defines the type of information exchange between two organizational units. Based on this, it is possible to determine who exchanges information with whom or who is related to whom.

**Definition** No help text is available for this object type.

**Definition** A complex object type represents a view of multiple information objects (entity and relationship types). Usually, a complex object type includes at least three information objects. Each complex object type should be assigned a model of the eERM type in which its data structure is described.

**Definition** The Component object type is available in UML models. It represents components that form units (e.g., executables) during system compilation, linking, or runtime. Components can, in turn, be contained in or call other components.

**Definition** Represents the instance of a component. Component instances exist within node instances.

**Definition** Element types that are assigned to a conditional section can be integrated into a DTD, if required. To integrate element types, the Ignore attribute of the conditional section must be deactivated.

**Definition** A connector illustrates that a data flow is split into multiple data flows.

**Definition** Constants represent strings. They are used in the mapping model to assign a predefined text expression to the value of an attribute.

**Definition** A constraint allows the range of values for the attributes of instances to be limited.

**Definition** Describes a container for other components. The visible name of the container can be specified as a control label object.

**Symbol(s)**

**Definition** Symbolizes any text that is entered as the content of an element.

**Symbol(s)**

**Definition** Context information is information about the model transformation currently being performed:

- Transformation ID
- Profile ID
- Name of the user performing the transformation
- Name of the filter used for the transformation
- Name of the current language
- Locale ID of the current language
- Code page of the current language
- Name of the fallback language, i.e., the language that is used by default if the specified language is not available
- Code page of the fallback language
- Timestamp

**Symbol(s)**

**Definition** Agreement between a service customer and a service provider, in which functional and non-functional benchmark figures are defined for the interaction.

**Symbol(s)**

**Definition** A control execution task is used to document control execution. Documentation activities, documentation frequencies, and result formats are specified, for example.

**Symbol(s)**

Definition Is used to specify the label of a container object.

Definition A conversation represents a logical grouping of message exchanges (message flows). The logical relationship usually refers to business objects, such as an order or an invoice. The Conversation object type represents the so-called conversation nodes in a BPMN conversation diagram. There are two basic symbols for this object type: Communication and Sub-conversation.

Definition No help text is available for this object type.

Definition A cost category subsumes original documents of the same type. A cost category represents allocated costs that have been incurred for similar purposes.

**Definition** The cost driver is the unit for measuring the result (output) of a function, e.g., units, hours, etc.

**Definition** The COT attribute object type describes the attributes of a complex object type. It does not provide new data, but always refers to exactly one single ERM attribute of an entity type or relationship type belonging to the complex object type. The relationship between a COT attribute and an ERM attribute can be illustrated in the ERM attribute allocation diagram.

**Definition** The COT attribute (instance) object type describes a COT attribute at the instance level. In other words, general facts from a higher level of description are described in more detail here (example: Customer -> Peter Miller).

**Definition** Describes a set of customer journey steps that a customer takes in order to make contact with an organization.

**Definition** Customer journey steps represent the stages your customers pass through while being in contact with your company, regardless of whether the cause of the contact is a product, an online experience, a retail experience, a service, or any combination of these. A customer journey step is part of a customer journey.

**Definition** Describes a stage in the lifecycle of a customer’s relationship with the organization. A customer lifecycle stage may comprise various customer journeys.

**Definition** Describes the community of customers or businesses that you are aiming at to sell your products or services to. A customer segment is a group of individuals who share similar characteristics, such as age or interests.

**Definition** A customer touchpoint stands for any encounter where a potential or existing customer comes in contact with your organization. This includes before, during, and after the purchase.

Definition A data store is an object that saves data for future access.

Symbol(s) \_\_\_\_\_  
 \_\_\_\_\_

Definition No help text is available for this object type.

Definition Data flows connect the input of a process or object with the input of another. They are modeled as objects of the Data value type between objects and are generally labeled with a description of the data. Data values can be used to specify the connection types of an OMT (Object Modeling Technique) functional model more precisely in order to describe the details of a data flow.

Definition Enables you to specify a date and a time.

Definition A DBMS represents a database management system.

Definition A DBMS type typifies individual database management systems (DBMS) that are based on precisely the same technology. DBMS types are usually identified by their name and a version number.

Definition A deliverable represents a precisely-defined outcome of a work package.

Definition Describes the path a product follows to reach the customer.

**Definition** The Documented knowledge object type enables you to classify knowledge recorded in documents, drawings, or files by topic.

**Symbol(s)**

**Definition** The value ranges of attributes in the relations diagram are called domains. A domain represents the set of all values that an attribute can have.

**Symbol(s)**

**Definition** The value ranges of field contents in tables of a table diagram are called 'Domain (physical)'. A domain (phys.) represents the set of all values a field can have.

**Symbol(s)**

**Definition** A draft list typifies individual lists with identical properties. The similarity can relate to the structure or content of the list, for example.

**Symbol(s)**

**Definition** An external or internal obligation that prompts an organization to define objectives. An example of an external trigger is a change in the ordinance and compliance rules that affect the way organizations operate, e.g., the Sarbanes-Oxley Act in the USA.

**Definition** An element is a part of an XML document. Elements can be used at all levels of the XML structure. They can be the root element of a document or regular elements which, in turn, can have subordinate elements, or exist as an element at the lowest level of the XML structure. Elements can be described by attributes.

**Definition** Describes the structure of a component that may occur in an XML document.

**Definition** Describes the emotion customers have due to their interactions with your company.

**Definition** An employee variable is a placeholder for a person that is involved in a process and needs to be specified later.

**Definition** No help text is available for this object type.

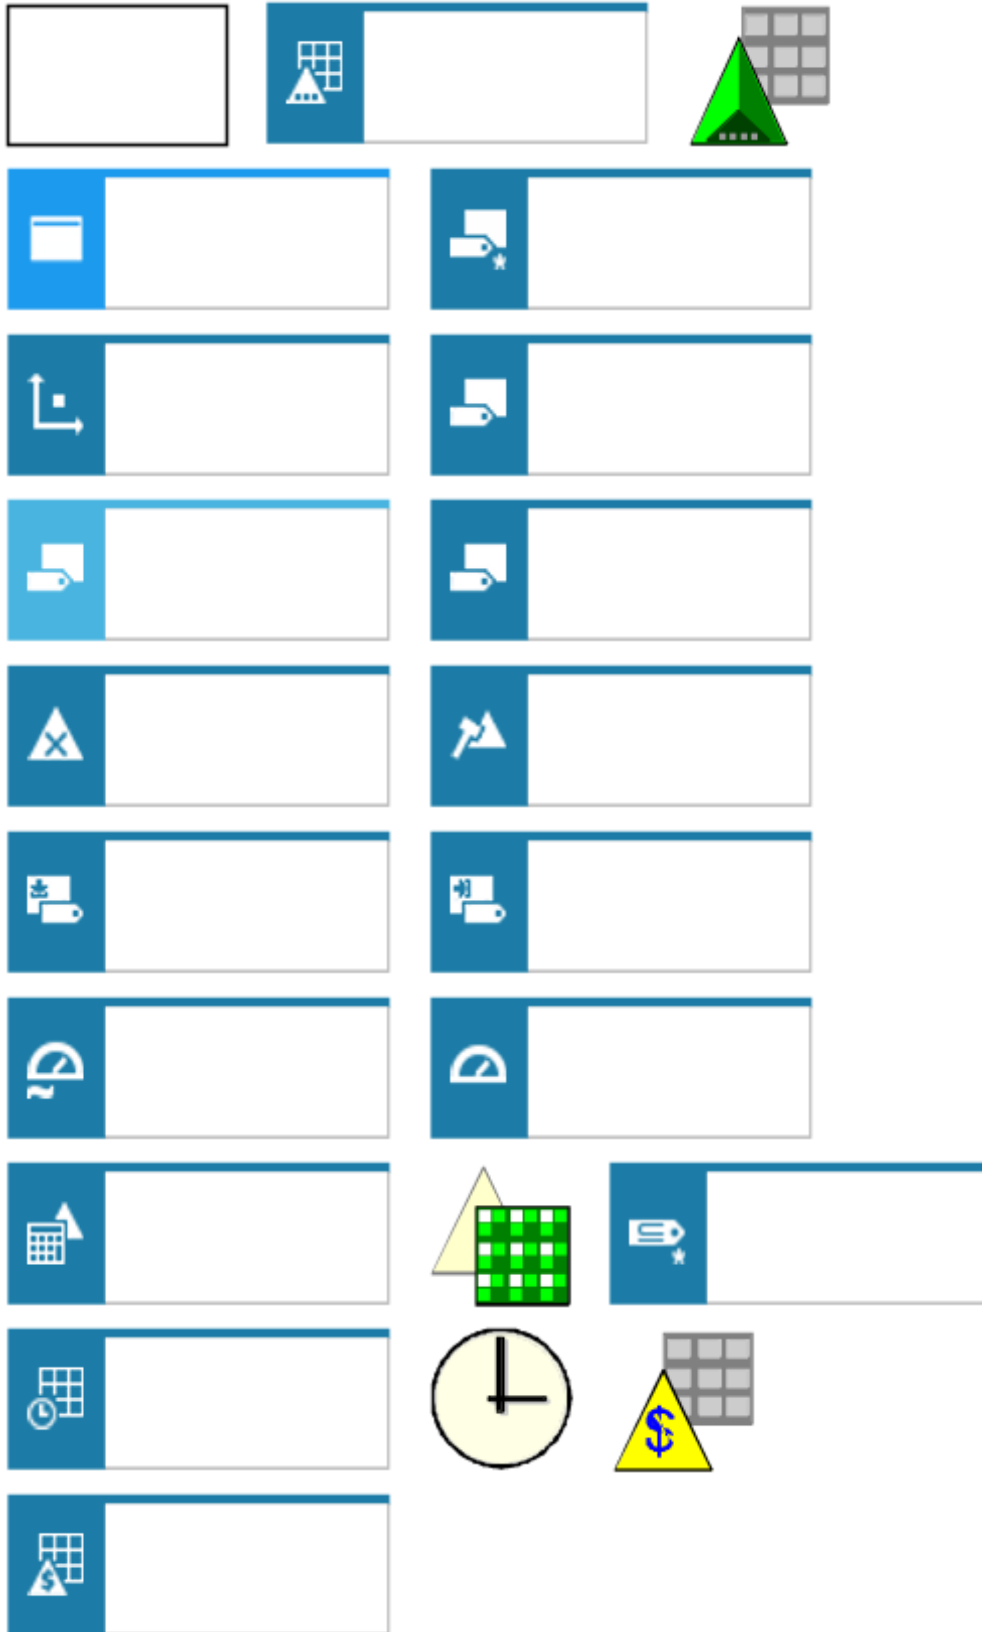

**Definition** Entities are real or abstract objects that are relevant for the business management tasks being examined.

Definition If similar entities are grouped into sets, these are referred to as entity types, the individual occurrences of which are the entities. Entities are of the same type if they can be described by the same attributes.

Symbol(s)

**Definition** By listing the corresponding attributes, the Enumeration object type specifies the relation of an entity type in more detail.

**Symbol(s)**

**Definition** Specifies a characteristic of the element type described and indicates possible attribute values.

**Symbol(s)**

**Definition** Defines possible values for the current enumeration.

**Symbol(s)**

**Definition** An enumeration occurrence is an enumeration at a more detailed level of description. While the Enumeration object type is used to describe the attributes of a relation in general, an enumeration occurrence describes the contents of these attributes.

**Symbol(s)**

**Definition** Describes the conditions under which something exists or functions.

**Symbol(s)**

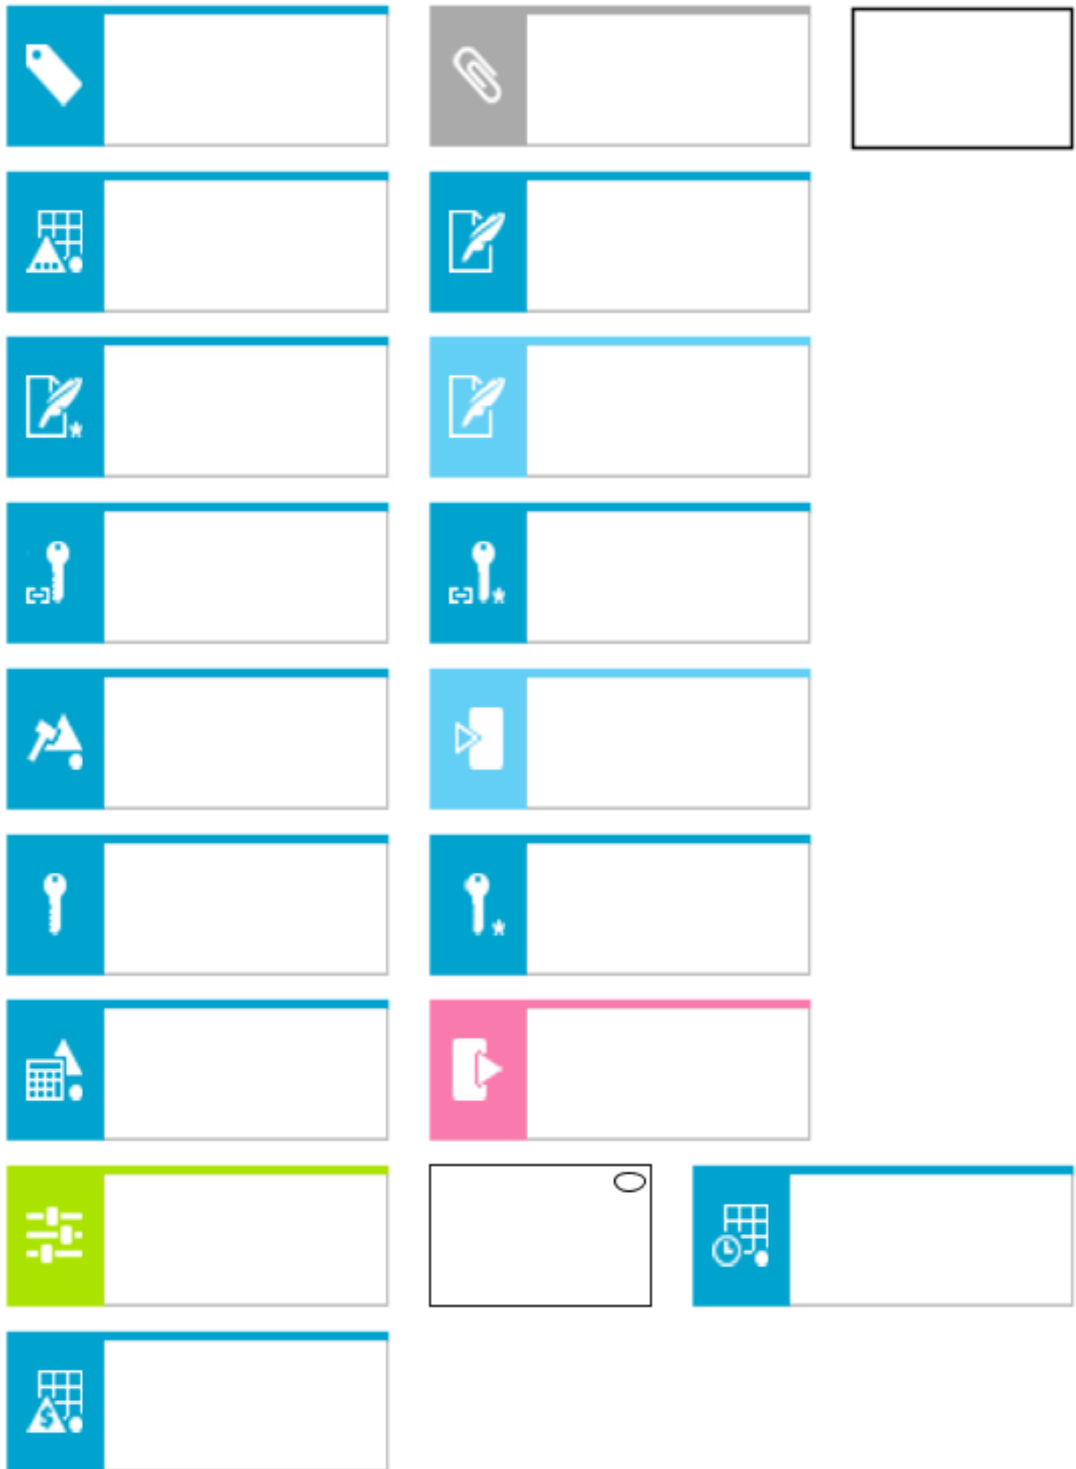

**Definition** Equipment represents one or more physical machines, tools, or instruments that can create, use, store, move, or transform materials.

**Symbol(s)**

Definition ERM attributes are properties that describe entity types.

Symbol(s)

Definition ERM attribute instances are properties that describe an entity or a relationship.

Symbol(s)

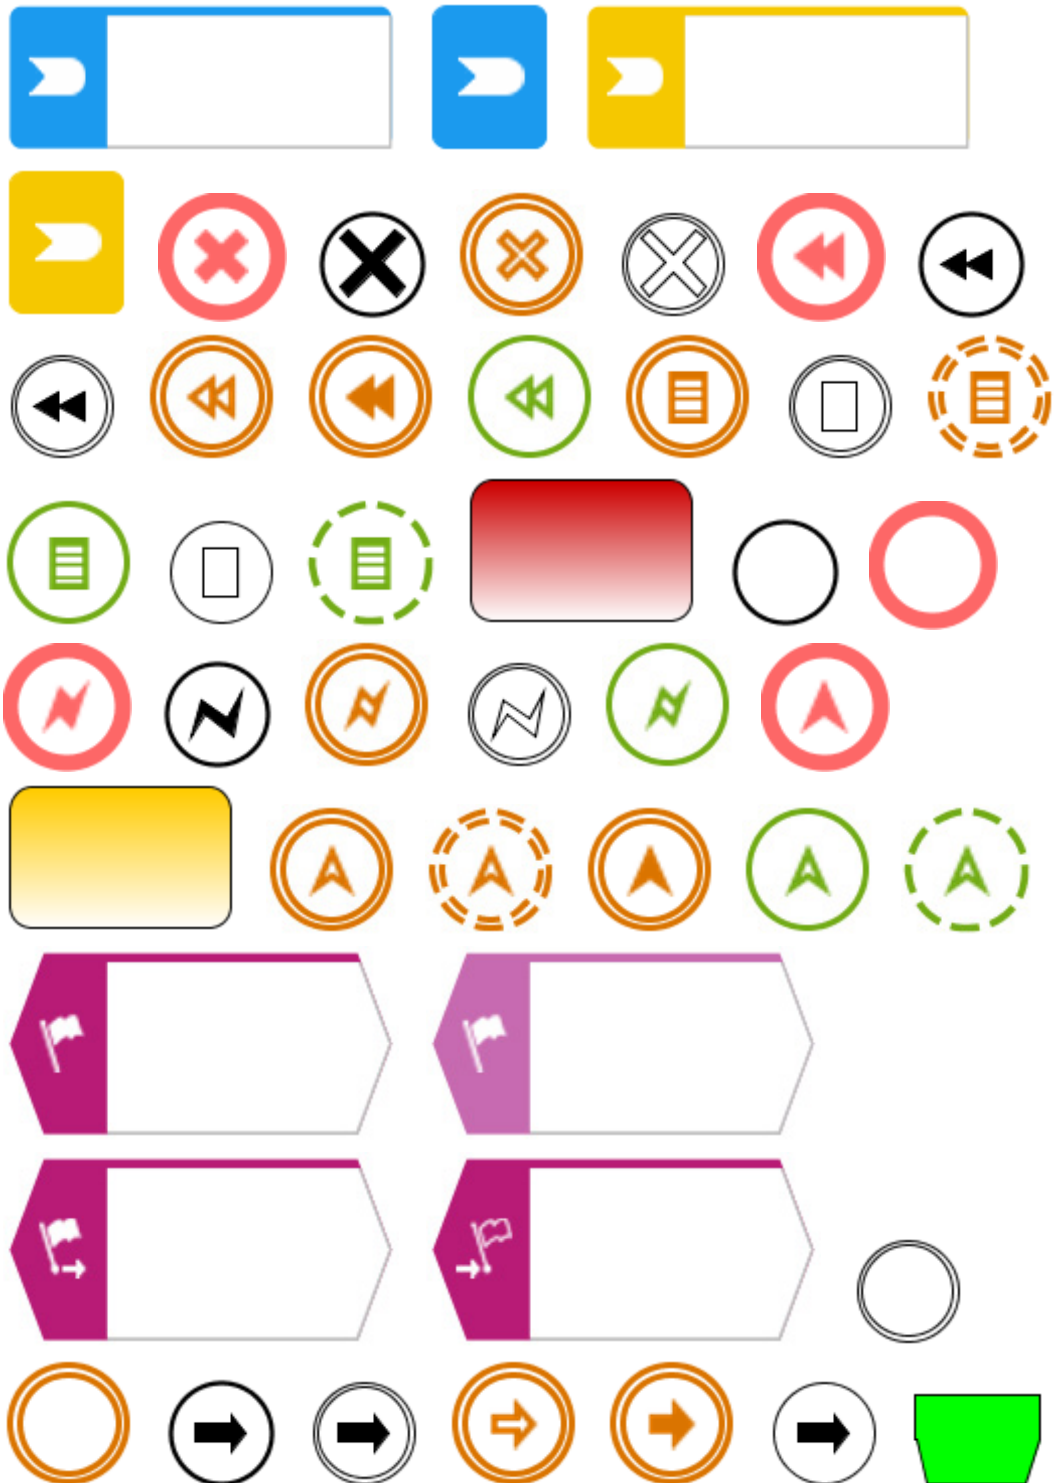

Definition The set of all values that an ERM attribute can have is called an ERM domain.

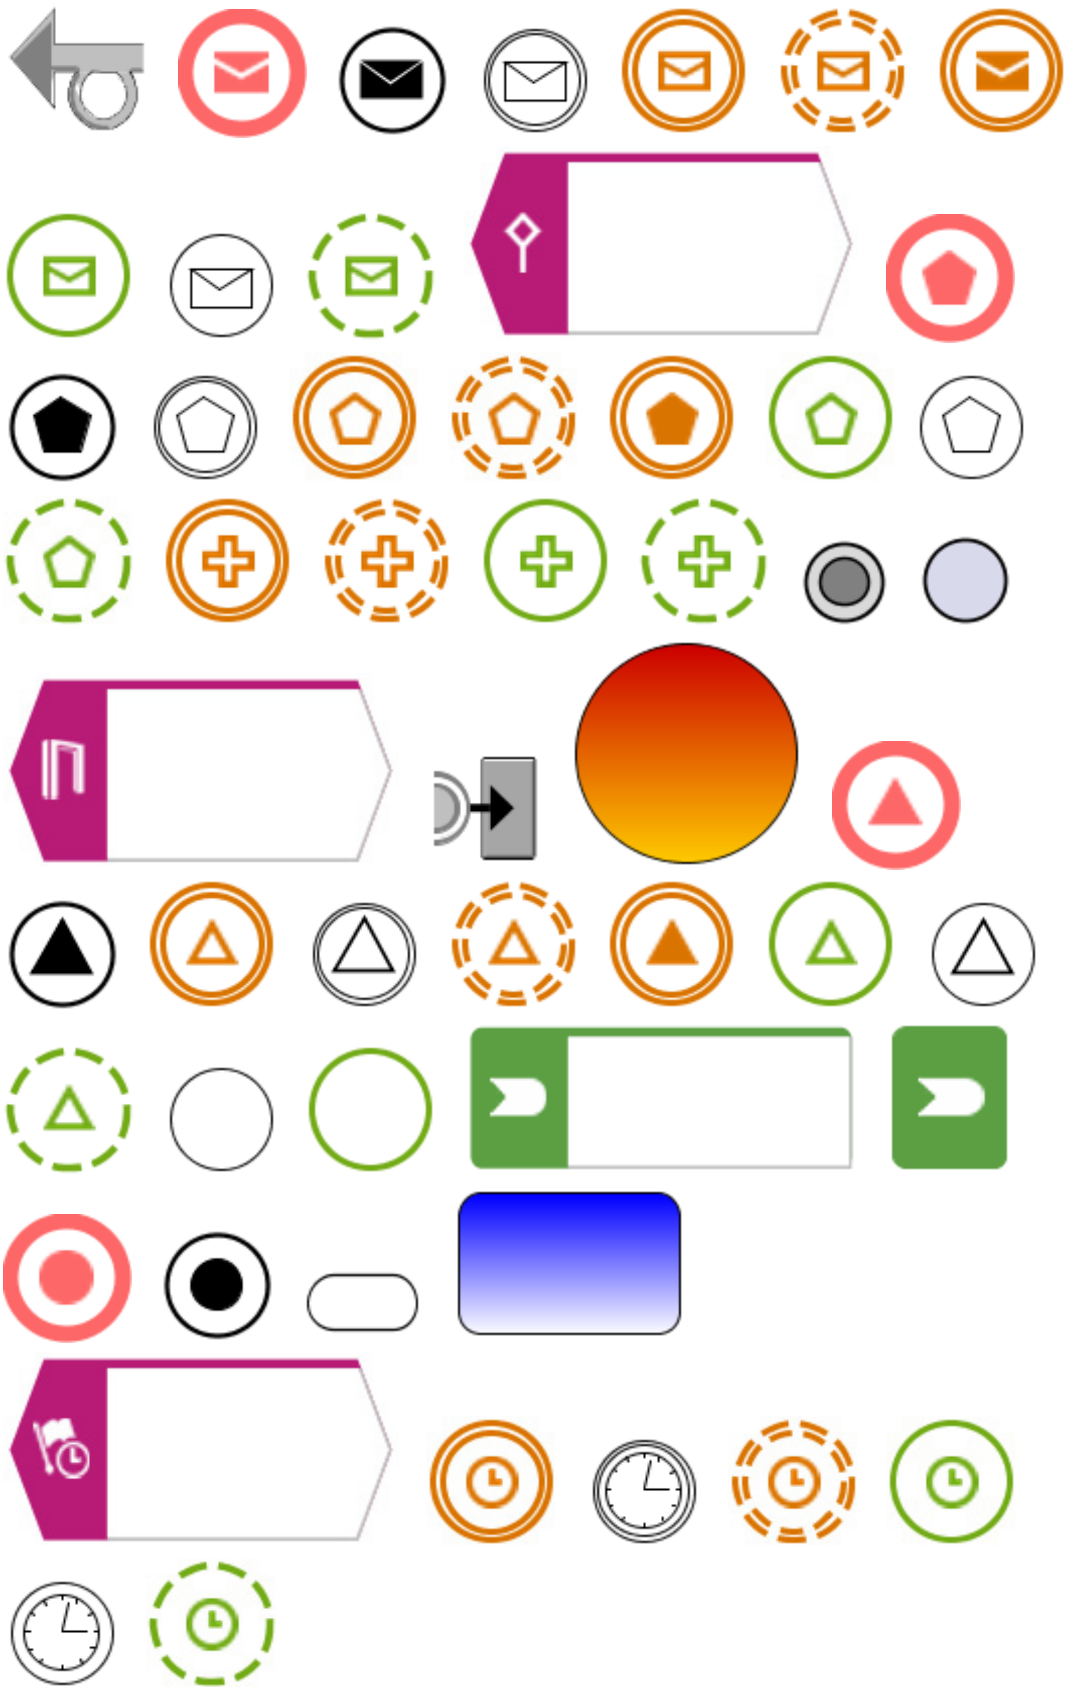

Symbol(s)

**Definition** An event describes the occurrence of a business management-relevant state that controls or influences the progression of one or more business processes. Changes in state are reflected by the changes in the status of the relevant environment data (information objects). Events trigger functions and are the results of functions. Unlike a function, which is a time-consuming task, an event relates to one point in time.

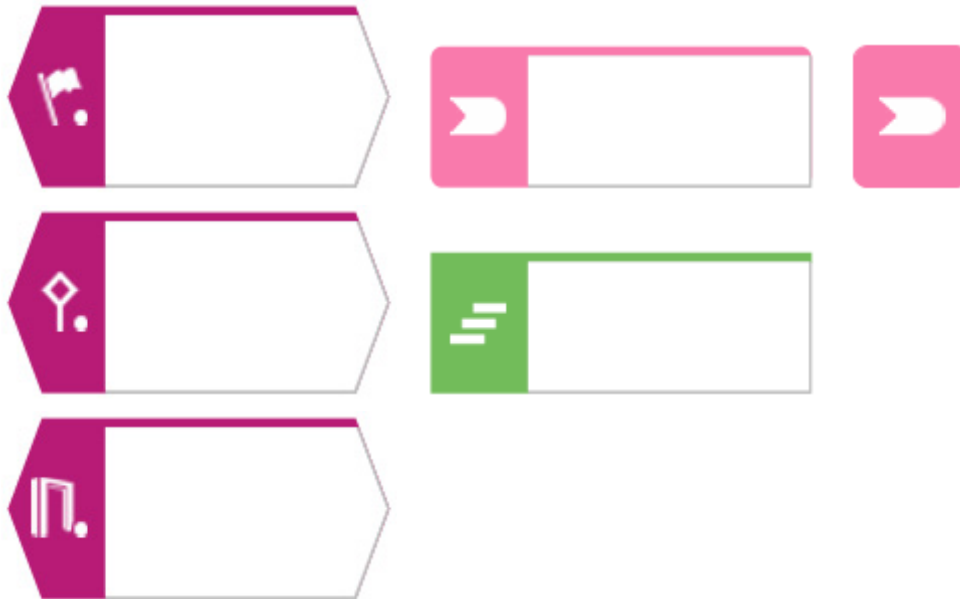

**Symbol(s)**

**Definition** A event instance is an event that occurs in a specific process instance. The event instance can be evaluated, i.e., it is possible to determine whether it is true or false.

**Symbol(s)**

**Definition** An exception is a signal that is triggered by a behavioral feature (operation and reception) as a consequence of an error situation.

**Symbol(s)**

**Definition** Refers to one or more points where the current use case may be extended.

**Symbol(s)**

Definition A facility represents a physical structure or environment.

Definition The logical structure of database systems can be described by tables and table fields. Fields define the logical content of a table. Possible values of a field can be specified by assigning a domain (phys.).

Definition A 'Field (specimen)' is an individual specimen of a field. Tables and fields define the logical structure of a database management system. Multiple specimens of logically defined tables and fields with exactly the same structure may exist in a company.

Definition Describes an actual product/service that has been realized in its entirety.

Definition A filter object type serves as a separation criterion within a distribution model. It specifies the criteria according to which a function type can be used multiple times in a system.

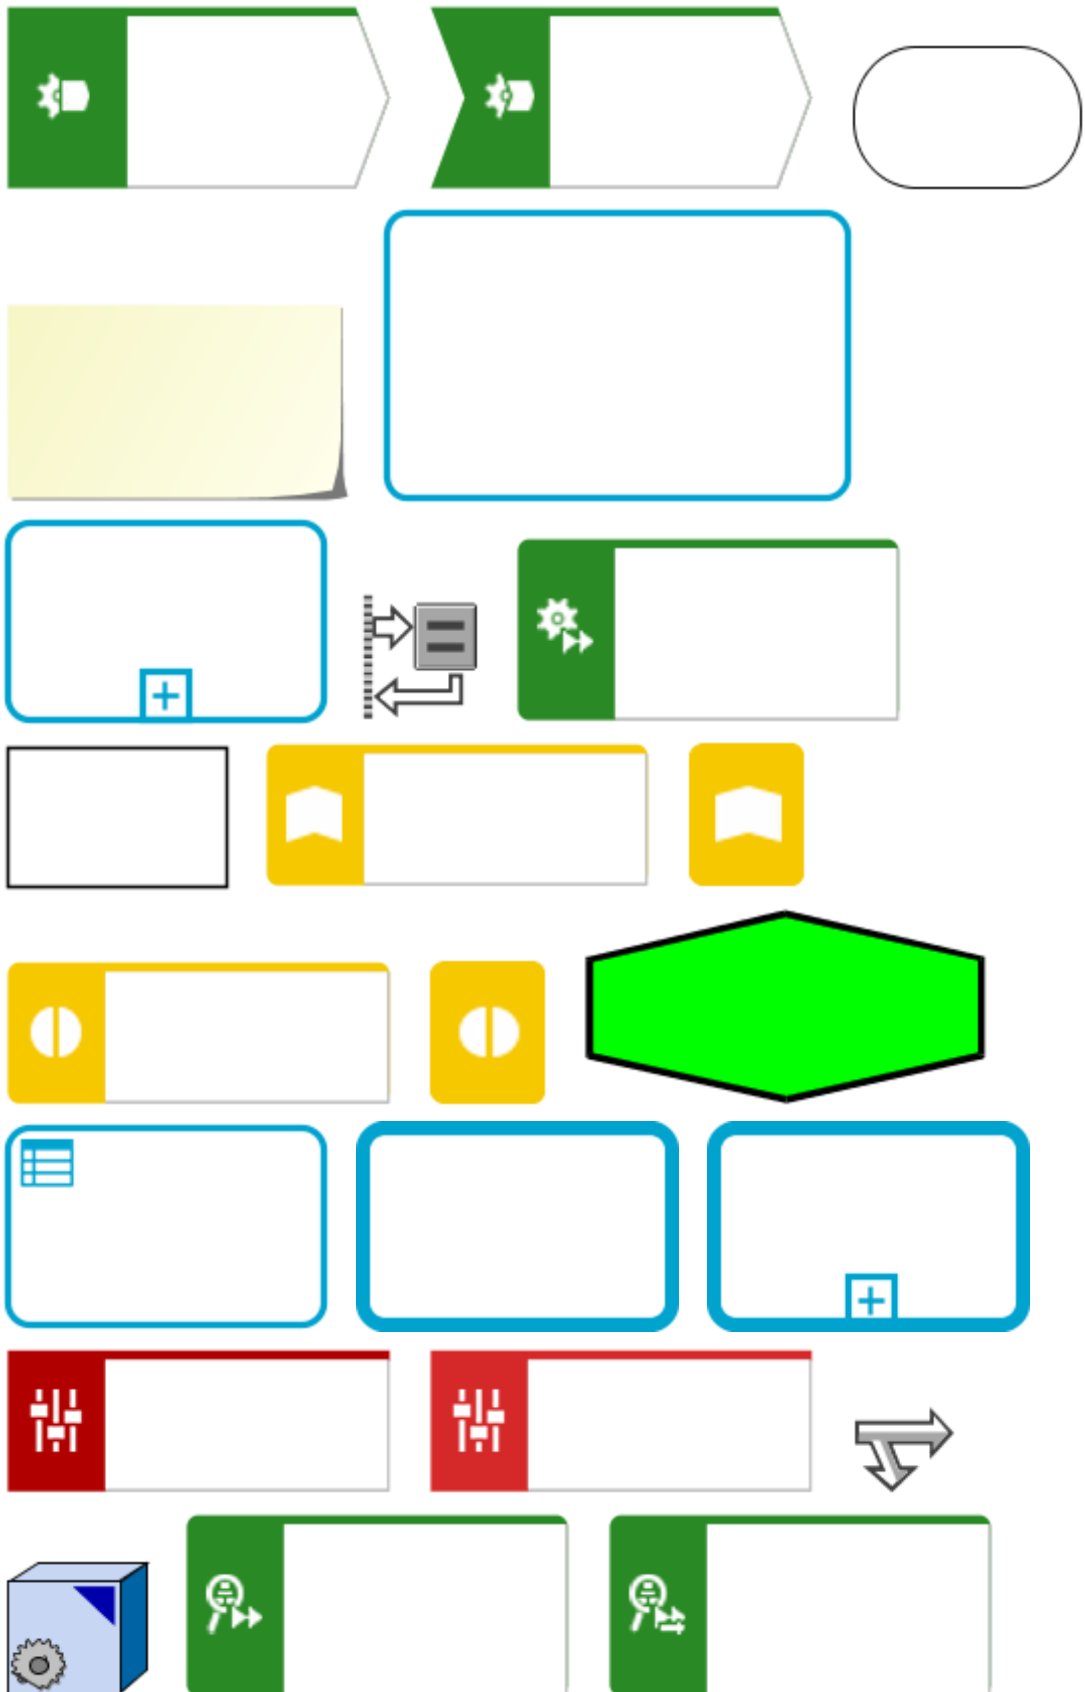

Symbol(s)

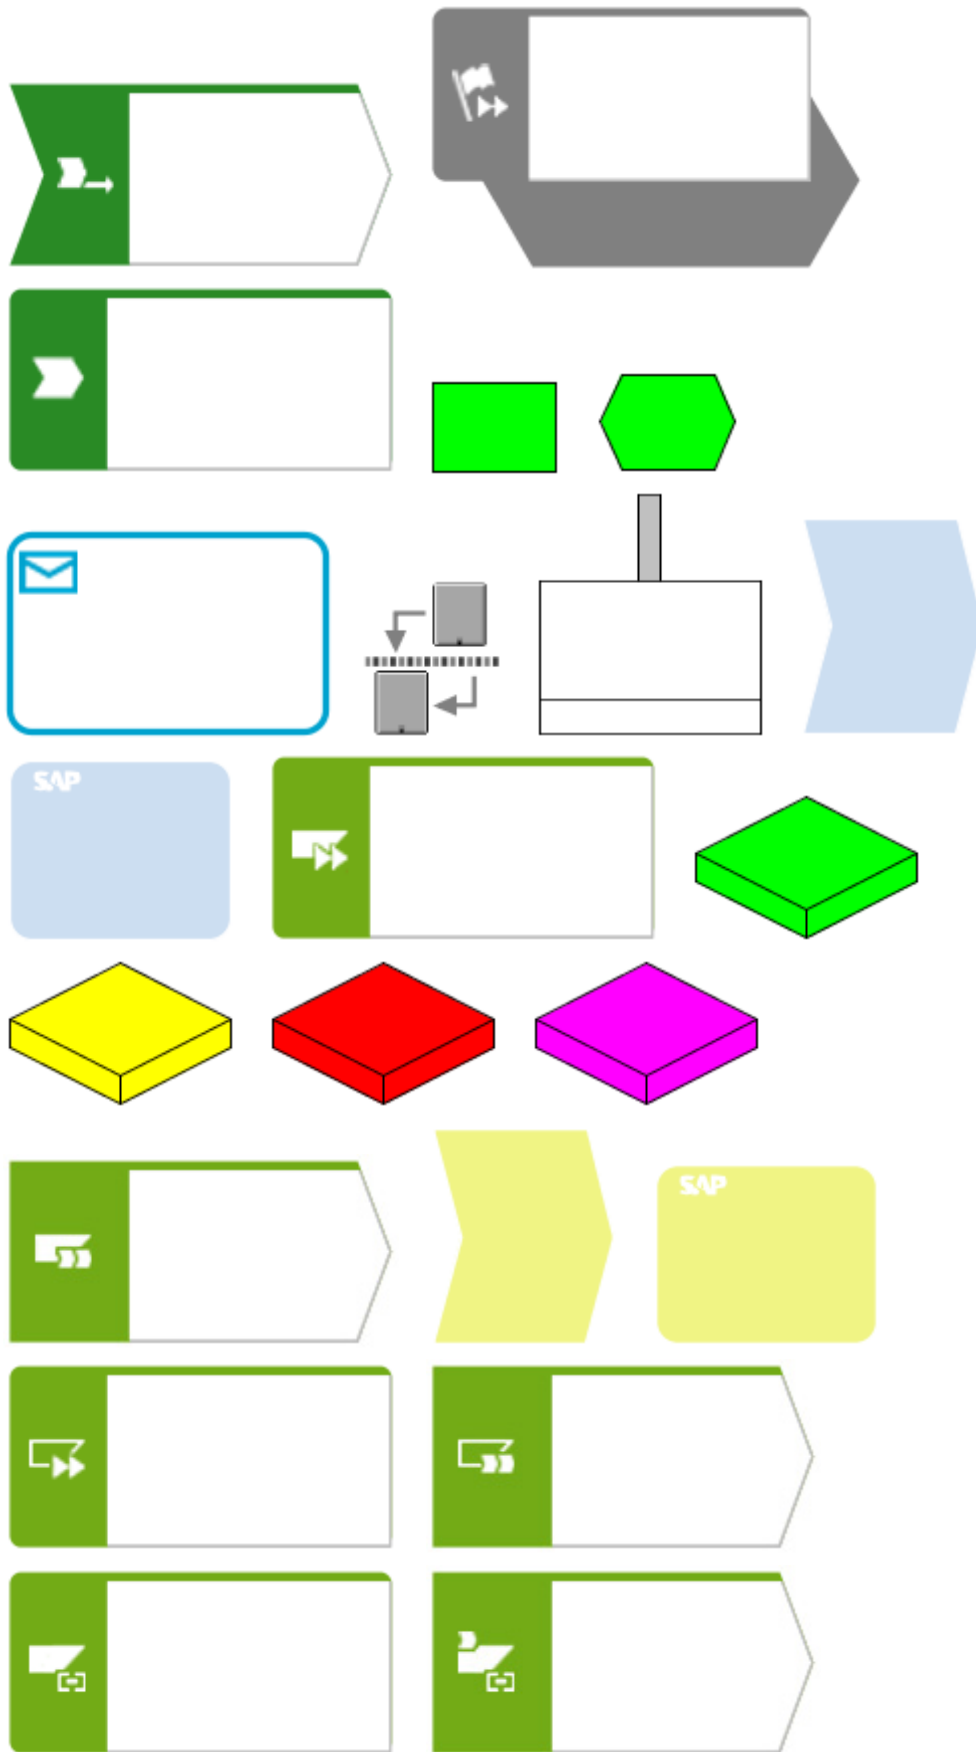

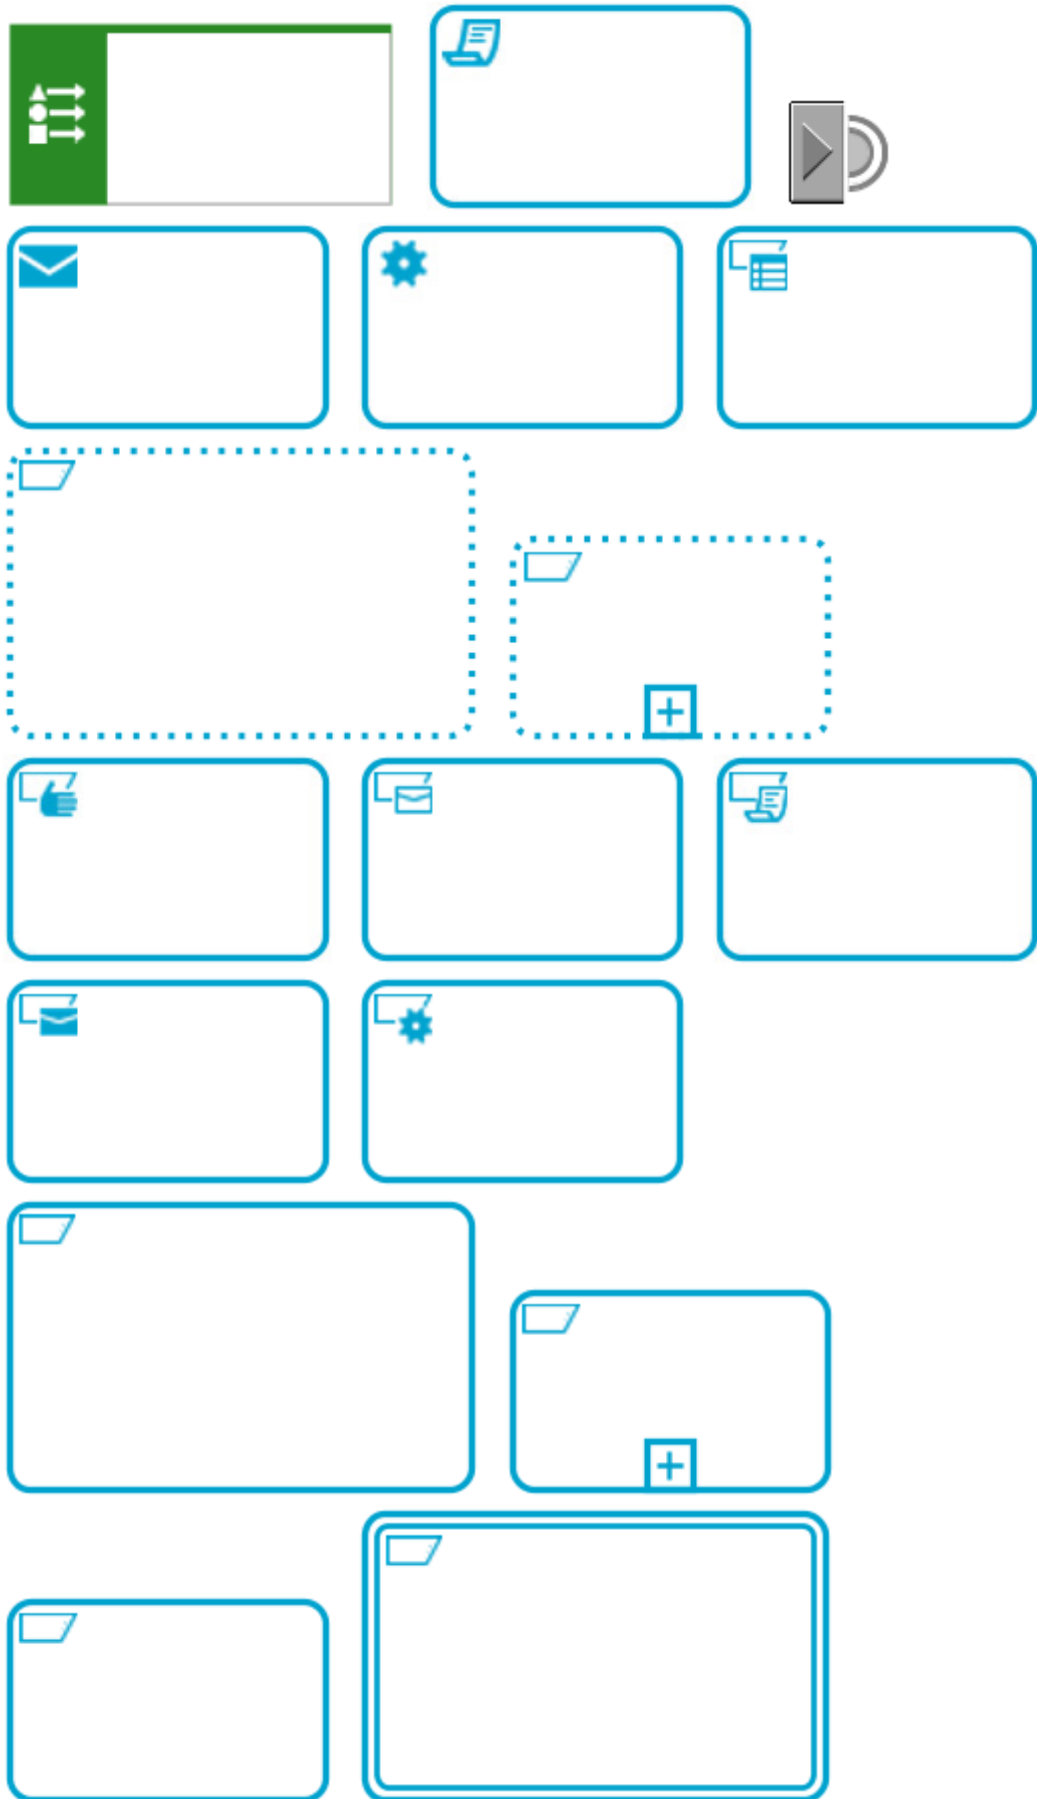

Definition A function is a technical task or activity performed for an object to support one or more business objectives.

Symbol(s)

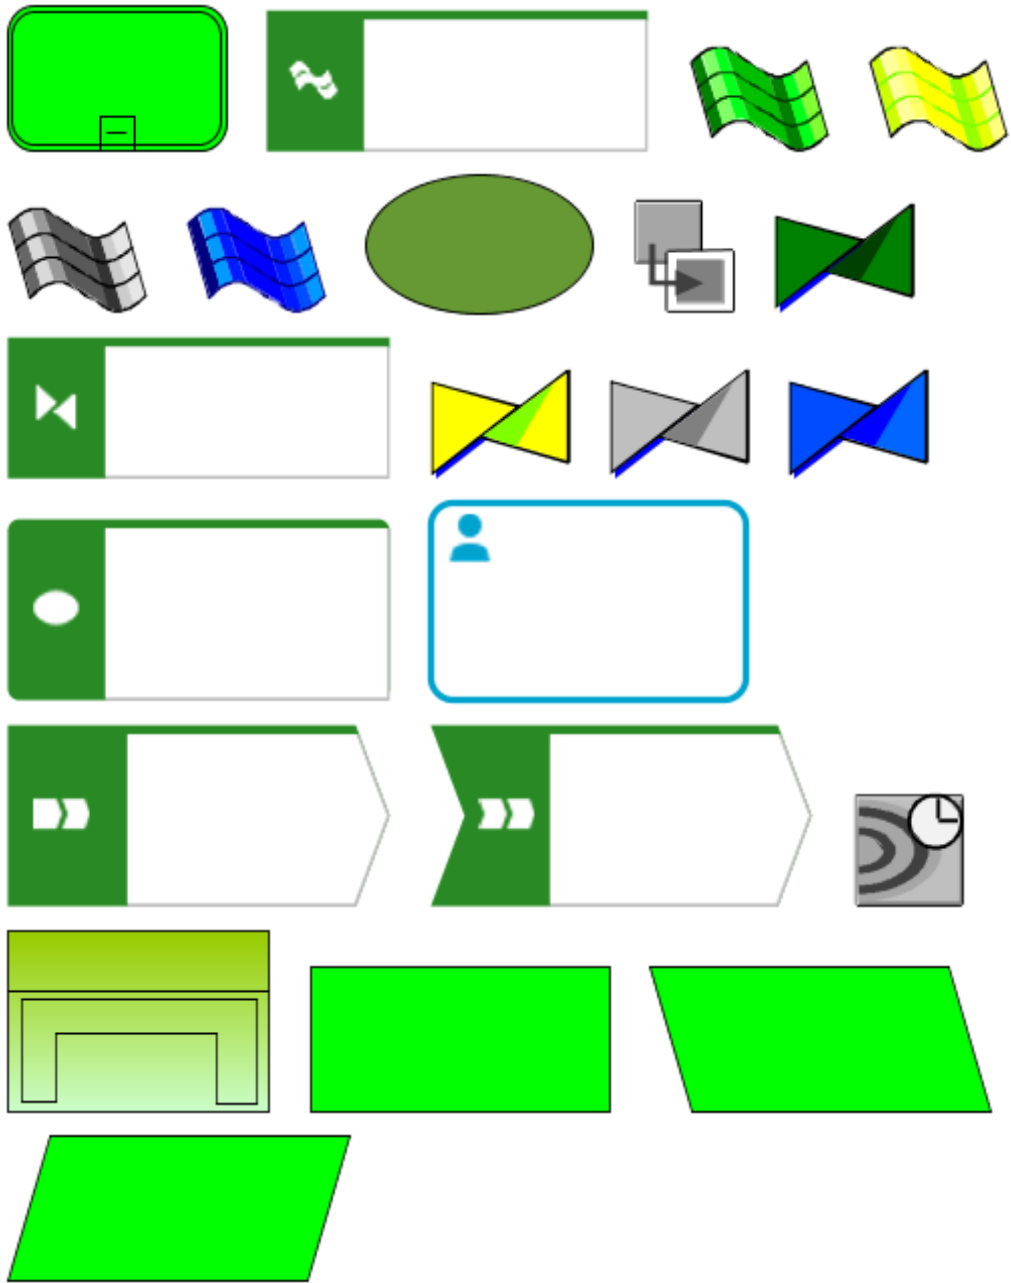

**Definition** A statement of difference between two states. It is used in the context of gap analysis. In the context of a strategic gap, for example, the difference between the baseline and the target is identified.

**Definition** No help text is available for this object type.

**Definition** A general resource is a resource that is not described in detail and is not necessarily a person or an operating resource. A general resource serves to run procedures.

**Definition** Generalization means that similar objects (entities) are identified and combined to form a superior object type.

**Definition** A graphical user interface type typifies individual graphical user interfaces that partly meet the same criteria. Application system types are realized on the basis of specific user interface types. Graphical user interface types are usually identified by their name and a version number.

**Definition** A group represents a grouping of employees (persons) collaborating for a certain period of time in order to perform specific tasks (as a project group), for example.

**Definition** Hardware components are specimens of various hardware component types that assist a company in performing its tasks. Hardware components are often identified by inventory numbers (e.g., the inventory number of an IT system).

**Definition** Similar hardware component types can be combined to form a hardware component class. The similarity can be based on different classification criteria. Thus, a hardware component type can be assigned to multiple hardware component classes.

**Definition** A hardware component type typifies individual specimens of hardware components that are based on precisely the same technology.

**Definition** Describes the potential for causing damage.  
 In contrast to a risk, a hazard ignores environmental factors based on which the probability of the occurrence of a risk can be determined.

**Definition** Is used to describe a control that displays HTML section headers, e.g., the heading levels H1 to H6.

The heading levels are specified using the Level attribute. The name attribute specifies the heading text that is displayed in front of the subordinate text of the control - if one exists.

**Definition** Describes a symbol embedded within an optional navigation link to a URL.

**Definition** Describes weak points of the process under consideration or areas to be examined in more detail within the scope of Change Management to identify measures for process optimization.

**Definition** An index can be used to sort the content of table fields according to specific criteria in order to enable quick and efficient access to the required information. In the table diagram, indices can be assigned to the fields of a table.

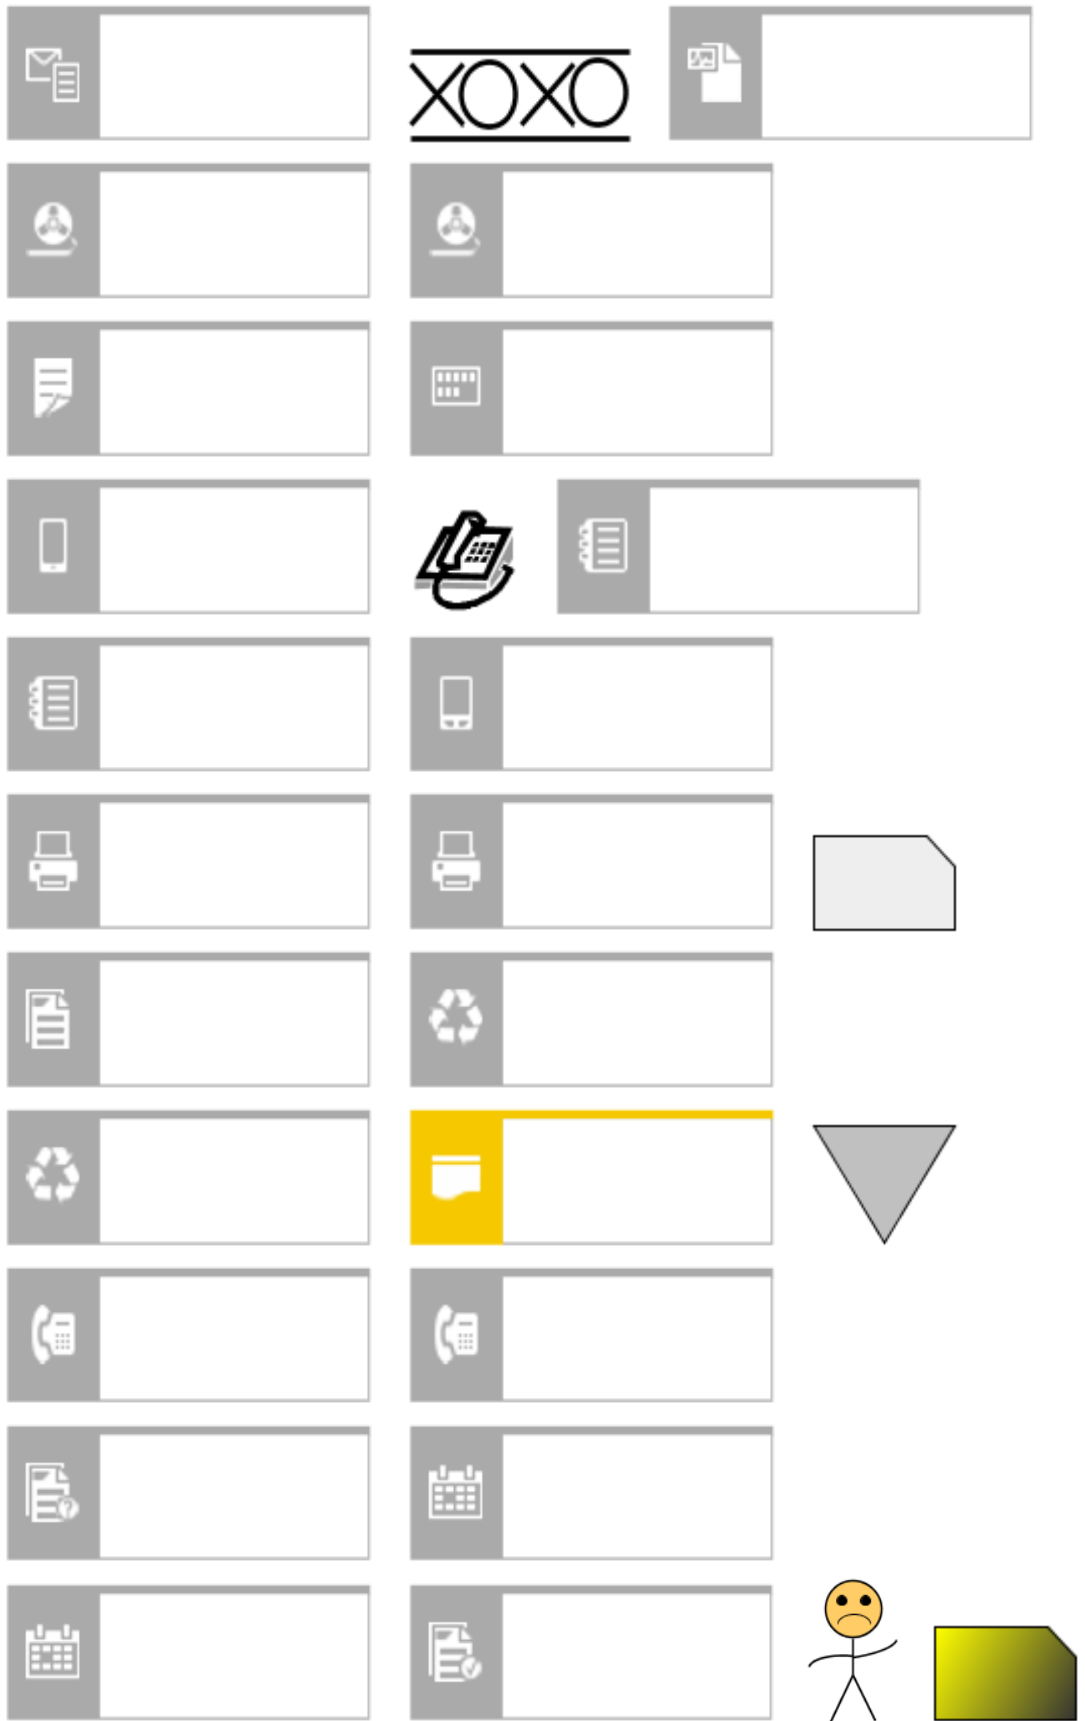

Definition An information carrier is a means to keep (store) information. It exists in the form of a card file, form, or computer file, for example.

Symbol(s)

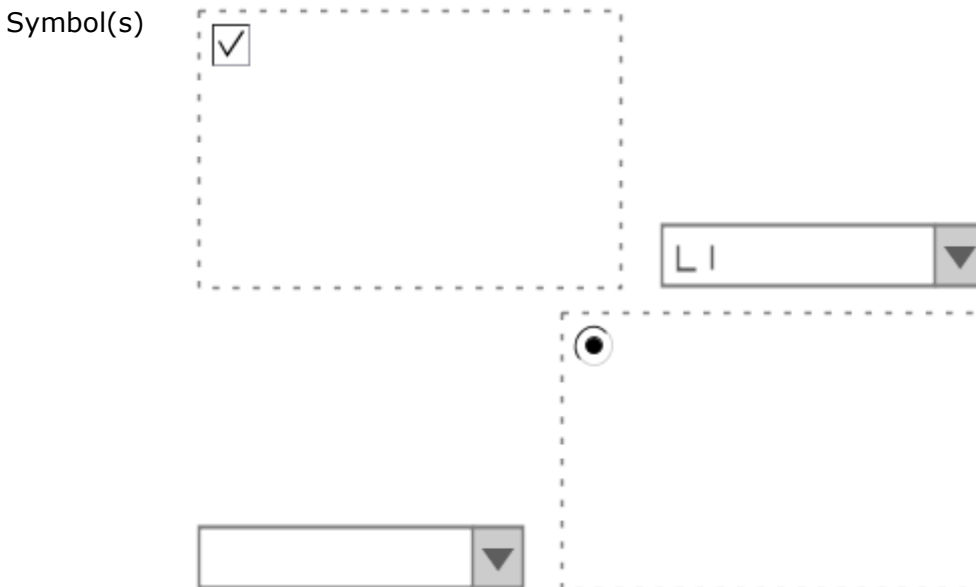

Definition An information element is a formalized representation of information.

Definition The information flow is an object containing the information that is forwarded between the Function and Application system type object types or between the Module and IT function type object types, for example. It is used for a more precise specification of the connections between these objects, i.e., it represents the data that is exchanged.

Definition Describes a group of option buttons, check boxes, or list items.

**Definition** The Instantiation cycle object type is available in the Process instantiation model model type and represents the medium object level for describing recurring instantiation interval sequences.

Example of the contents of an instantiation cycle:

For a defined process that specifies the events of a workday in the instance, the cycle is Mon - Fri.

**Symbol(s)**

**Definition** The Instantiation interval object type is available in the Process instantiation model model type. An instantiation interval describes how many process instances are to be created for a start event at a specific point in time.

An instantiation interval is defined by the following attributes:

- Relative interval start
- Interval duration
- Number of process instances
- Distribution
- Repeat in cycles
- Periods.

Example of the contents of an instantiation interval:

The instantiation interval describes a day with 24 hours. It begins at 8:00 am, has a duration of 2 hours, defines a number of process instances, e.g., 50, and stipulates a normal distribution with the values  $\mu=9.00$  (absolute point in time),  $\sigma=30$  min. This means that at 9:00 am, 50 process instances are created according to the normal distribution and with a standard deviation of 30 minutes. In the case of a defined process, 50 processes are started with equal distribution at the beginning of a workday at 8:00 am.

**Symbol(s)**

**Definition** The Instantiation plan object type is available in the Process instantiation model model type and represents the upper object level for describing multiple instantiation cycles.

Example of the contents of an instantiation plan:

For a defined process that specifies the events of a week in the cycle, the instantiation plan represents the annual work schedule.

**Symbol(s)**

**Definition** Designates a set of stimuli that participate in a collaboration instance set to perform a specific task there.

**Symbol(s)**

**Definition** In ARIS, an IoT object represents a type of things that are elements of the Internet of Things (IoT) and have similar properties. According to the Telecommunication Standardization Sector of ITU, things can be described as follows:

“Regarding the IoT, things are objects of the physical world (physical things) or of the information world (virtual world) which are capable of being identified and integrated into communication networks.

A physical thing may be represented in the information world via one or more virtual things (mapping), but a virtual thing can also exist without any associated physical thing.”

(Source: ITU-T, Telecommunication Standardization Sector of ITU, Series Y: Global information infrastructure, Internet protocol aspects and next-generation networks, Overview of the Internet of things, 06/2012)

An IoT object can consist of multiple components that are described using the IoT object definition model type.

A component, in turn, can be an IoT object, or also a sensor or an actuator.

Using the IoT object context model type, additional details can be provided that describe the protocols in use, the relevant events and functions, the data relevant to the IoT object, and the risks associated with the IoT object.

**Symbol(s)**

**Definition** An IS service is an interface of a service type or a capability. IS services allow other IS elements controlled access to data and processing methods of the IS element that provides a service.

These interfaces can be used to exchange messages with other elements of the IS view.

**Symbol(s)**

**Definition** An IT function is an individual specimen of an IT function type. Multiple specimens (IT functions) of an IT function type may be implemented in a company. Usually, they are not identified independently, but rather by the license number of the modules in use to which they are assigned.

**Symbol(s)**

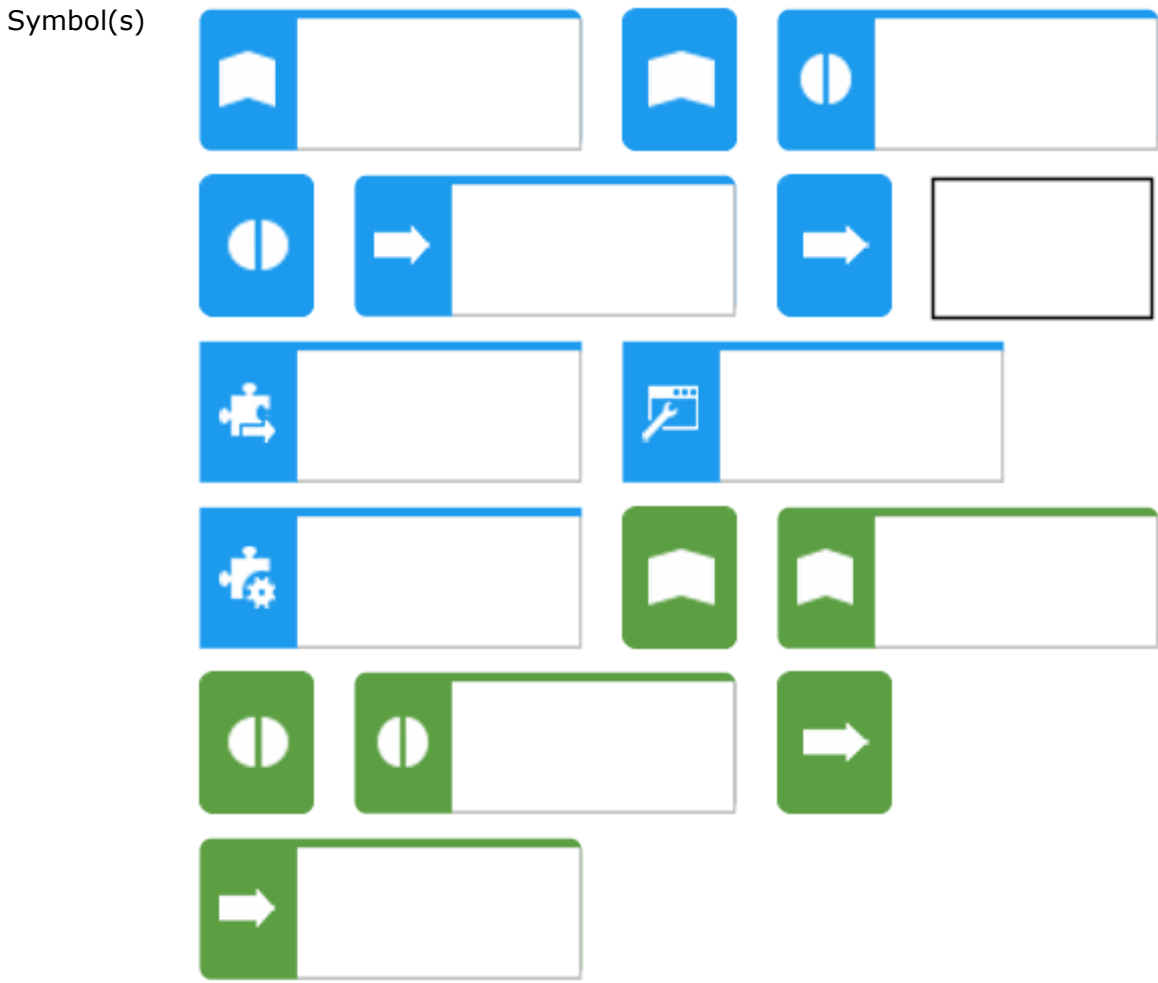

**Definition** Similar IT function types can be combined to form an IT function class. The similarity can be based on different classification criteria. Thus, an IT function type can be assigned to multiple IT function classes.

**Symbol(s)**

**Definition** An IT function type, in the sense of a transaction, is the smallest unit of a module type. IT function types are realized as individual program modules and must always be carried out completely to process an individual work step. An IT function type typifies individual IT functions that are based on precisely the same technology.

**Definition** A knowledge category is used to classify knowledge by topic.

**Definition** A KPI instance is an indicator or a benchmark for measuring a degree of goal accomplishment.

It can contain a plan value, an actual value, and a target value.

**Definition** Describes a container for form fields, groups of form fields, or subgroups of form fields. The visible name of the container can be specified as a label attribute.

**Definition** Lanes originate from swimlane flow charts. In BPMN, they are used to organize and categorize flow elements in a process or pool. They are therefore parts of a process or pool. In BPMN 2.0, lanes do not have predefined semantics, i.e., any classification criterion can be used when creating lanes. However, lanes are frequently used to represent internal departments and roles, or IT systems. They can be nested.

**Definition** The Layout object type assigns representation properties to the Screen, Page, Section, Column, Screen table, COT attribute, and Text objects.

**Symbol(s)**

**Definition** Represents the instance of an association class.

**Symbol(s)**

**Definition** Is used to describe a control that displays data models as a list.

**Symbol(s)**

**Definition** Lists and screens represent communication interfaces between users and application systems. A list is an input or output (presentation) medium used by an application system. Unlike a draft list, which - in the sense of a list type - defines the structure of multiple similar lists, a list is the concrete instance of the draft list.

**Symbol(s)**

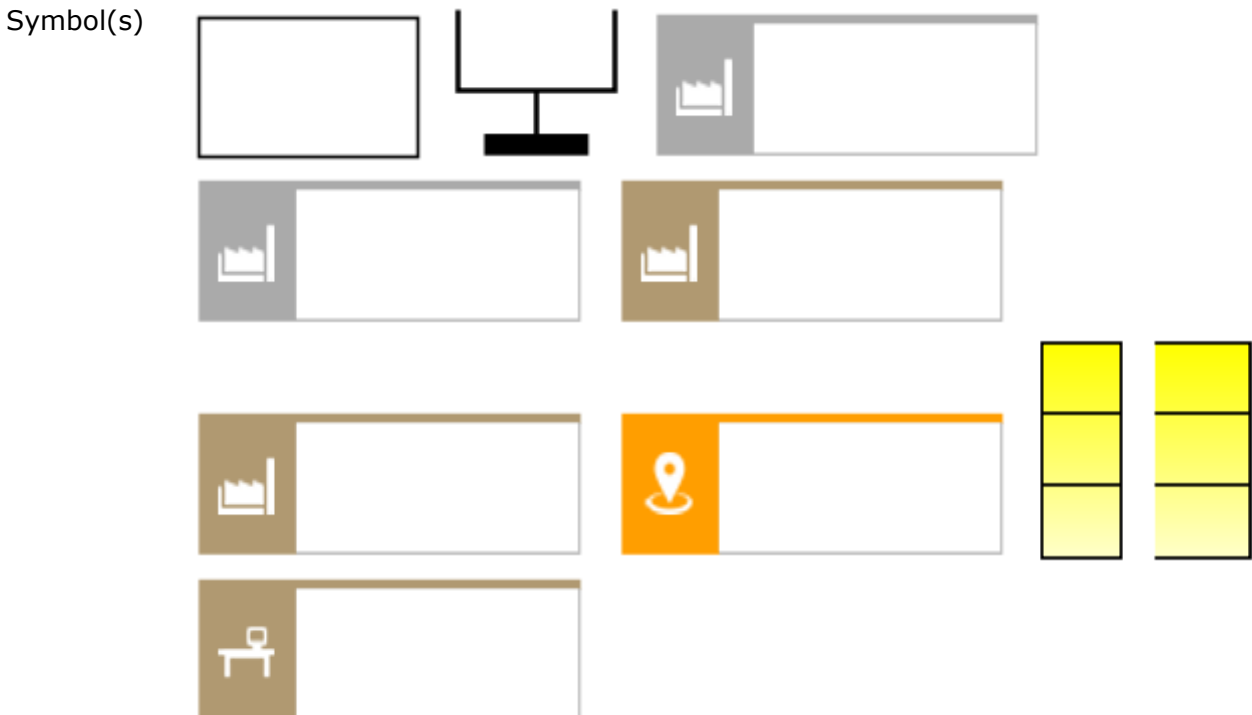

**Definition** A list control displays a set of items. A symbol precedes the name of each item so that items of the same type can be recognized. The items can be displayed as large symbols, small symbols, in a list, or in a detail view.

**Definition** Locations specify the physical positions of organizational units, positions, hardware components, or technical resources of a company. A location can be:

- a region
- a city
- a plant
- a building
- a room
- an individual workstation

Definition

A location type is the general description of an environment/scenario in which an operation might take place.

Examples:

- Desert
- Arctic

Symbol(s)

Definition

The Loop start object type is available in the Program flow chart (PF) model. It defines the beginning of a sequence of several processing steps. This sequence is completed by a loop end. It is characteristic of this process flow that is repeated as many times as required.

Symbol(s)

Definition

The main process represents the main function in the function trees to which the processes (functions from the scenario processes) are assigned.

Symbol(s)

Definition

Describes activities/instruments that are used for market positioning.

Symbol(s)

**Definition** Similar material types can be combined to form a material class. The similarity can be based on different classification criteria. Thus, a material type can be assigned to multiple material classes.

**Definition** A material flow is an object containing information about materials that are forwarded between two functions in a material flow diagram. It is used for a more precise specification of the connections and the materials to be forwarded by them.

**Definition** A material type typifies individual materials with identical material properties.

**Definition** No help text is available for this object type.

Definition No help text is available for this object type.

Definition In a memory location, data is stored in the form of tables or fields.

Definition The Message object type is used to represent the exchange of messages between two interacting partners, including processes and activities.

Definition A message type classifies the messages being exchanged between distributed systems, depending on the data and transactions involved.

Definition A module is an individual specimen of a module type. A single module can be uniquely identified by the license number, for example. Multiple modules (individual licenses) of one module type may be used within a company.

**Definition** Similar module types can be combined to form a module class. The similarity can be based on different classification criteria. Thus, a module type can be assigned to multiple module classes.

**Definition** A module type is a component of an application system type, which is capable of autonomous operation. A module type typifies individual modules based on precisely the same technology.

**Definition** Describes a consumer's feeling of deficiency, which is to be eliminated. A need stands at the beginning of a purchasing decision process. If consumers are faced with a product that is likely to satisfy their need, a demand arises.

**Definition** Networks are specimens of various network types that assist a company in performing its tasks. Networks can be identified by unique location assignments or inventory numbers, for example.

**Definition** Similar network types can be combined to form a network class. The similarity can be based on different classification criteria. Thus, a network type can be assigned to multiple network classes.

**Definition** Network connections are specimens of various network connection types that assist a company in performing its tasks. Network connections link network nodes to each other.

**Definition** No help text available.

**Definition** A network connection type typifies individual network connections that are based on precisely the same technology.

**Definition** Network nodes are specimens of various network node types that assist a company in performing its tasks. A network node represents a point of access to a network to which hardware components are connected.

**Definition** No help text available.

**Definition** A network node type typifies individual network nodes that are based on precisely the same technology.

**Definition** A network type typifies individual networks (information system networks) that are based on precisely the same technology.

**Definition** The Note object type is available in UML models. It can be used to add notes to objects.

**Definition** An object element represents an object or connection within a source or target in a mapping model.

**Definition** An object instance is an occurrence of an object, i.e., a specimen of an object defined by means of specific values.

**Symbol(s)**

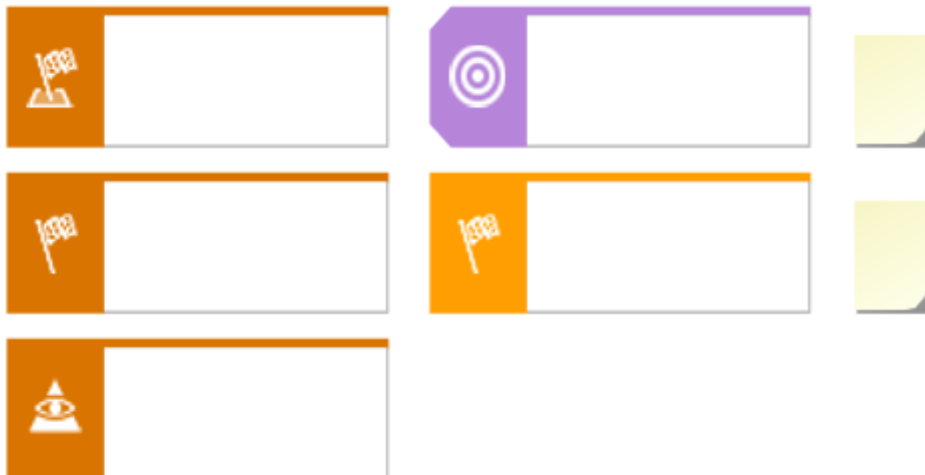

**Definition** An object type class classifies functions. The functions to be examined according to a classification criterion that must be specified are assigned to the object type class.

**Symbol(s)**

**Definition** An objective defines future business objectives to be achieved by promoting success factors and implementing new business processes.

**Symbol(s)**

**Definition** Operating resources are specimens of various operating resource types that are available for a company to perform its tasks. Operating resources are often identified by inventory numbers (e.g., number of a production plant).

**Definition** Similar operating resource types can be combined to form an operating resource class. The similarity can be based on different classification criteria. Thus, an operating resource type can be assigned to multiple operating resource classes.

**Definition** An operating resource type typifies individual operating resources that are based on precisely the same technology.

**Definition** The Operating system object type assists users in defining the technological basis for application system types and module types. Multiple object types of this kind can be connected to an application system type. For example, an application system can run on the Windows 8 and Windows 10 operating systems.

**Definition** An operating system type typifies individual operating systems that are based on precisely the same technology. Operating system types are usually identified by their name and a version number.

**Definition** Operations (operational methods) represent functions or transformations assigned to classes.

**Definition** An operator is used to concatenate the values of two placed attributes or texts. In turn, the result of a concatenation (interim value) can be linked to other attributes, text constants, or operators.

**Definition** Describes a radio button or check box within a corresponding control group, or an item in a drop-down list box or combo box.

**Symbol(s)** 

**Definition** Specifies the number of possible answers to a question (Option set). An option set can be assigned to various questions.

**Symbol(s)** 

**Definition** An organizational chart represents a cluster of organizational relationships at a high level of abstraction.

**Symbol(s)** 

**Definition** Organizational structures are usually represented in organizational charts. The structuring criterion mostly refers to operations, i.e., positions performing the same operations are combined to form an organizational unit. In addition to this breakdown by operation, large companies define various levels (organizational levels) used for assigning responsibilities and privileges.

Examples of this type of organizational level are:

- Product area
- Operation
- Operating area

**Symbol(s)** 

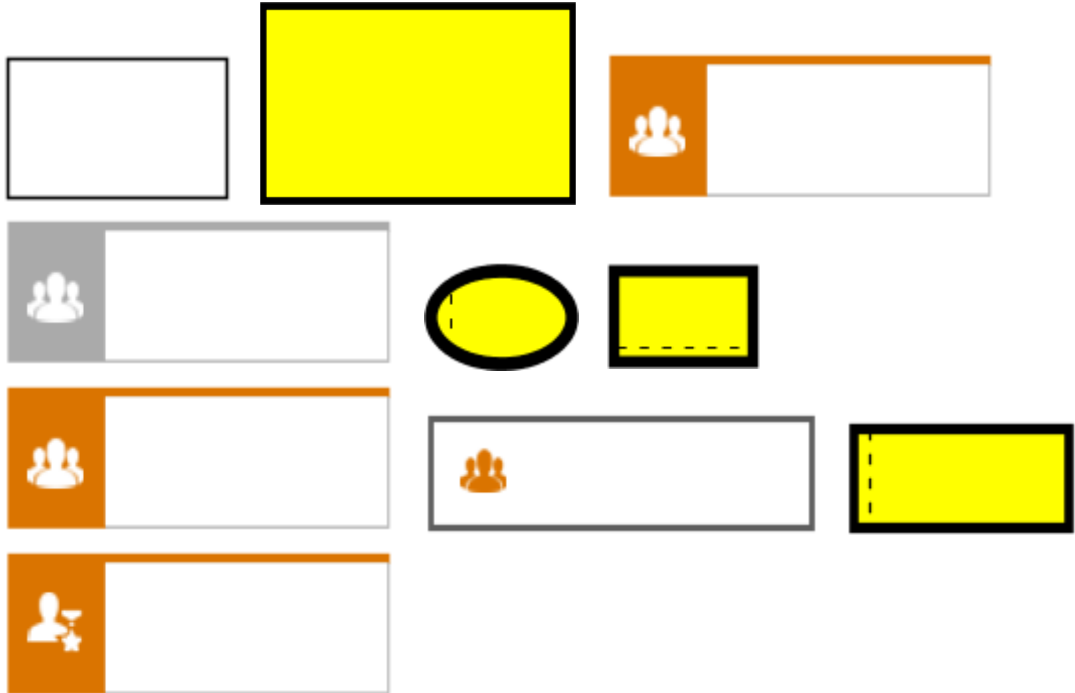

Definition Organizational units are the performers of the tasks that must be carried out in order to achieve the business objectives.

Symbol(s)

**Definition** An organizational unit type typifies individual organizational units with identical properties. These properties can refer to similar privileges and responsibilities, for example. Accordingly, for example, all main departments and subdepartments of a company are subject to relationships and rules that need to be defined only once if a corresponding typification exists.

**Symbol(s)**

**Definition** Is used to describe a control that generates parameterized text (Output text symbol) or displays the value of this object as formatted clear text (Formatted text symbol).

**Symbol(s)**

**Definition** A package is an object type that is available in UML models. It is used to structure model elements by arranging components in a group and assigning them to a specific package. In the EPC, a package is used to represent input and output relationships of functions at a rough or fine level of detail, i.e., to illustrate the generation or use of information. A package has no write or read function.

**Symbol(s)**

**Definition** Similar packaging material types can be combined to form a packaging material class. The similarity can be based on different classification criteria. Thus, a packaging material type can be assigned to multiple packaging material classes.

**Definition** A packaging material type typifies individual packaging materials with identical properties (e.g., material properties).

**Definition** The Page object type is available in the Screen diagram model type. A screen can have multiple tabs. These are referred to as pages.

**Definition** No help text is available for this object type.

Definition No help text is available for this object type.

Definition The Participant object type (formerly Pool) represents the partners involved in an interaction or a collaboration. Participants are graphically represented by the Pool symbol. A participant is usually responsible for executing the process that is represented in a pool. A pool must not necessarily include a process. In BPMN 2.0, participants can be modeled in a BPMN collaboration diagram and BPMN conversation diagram.

Definition Means of dividing the individual states of an activity diagram into groups.

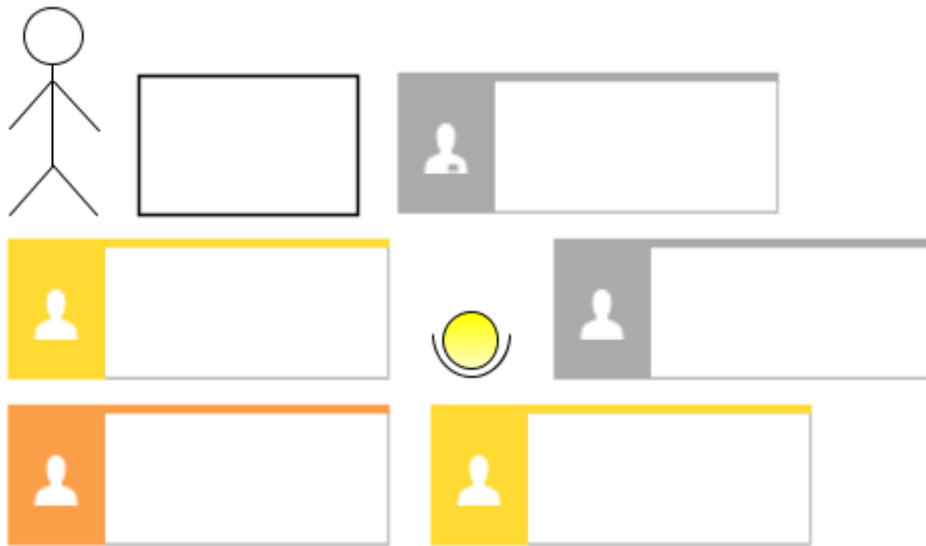

Definition No help text is available for this object type.

**Definition** Persons are employees of a company who can usually be identified by a personnel number. Persons can be assigned to the organizational units to which they belong and to the functions they carry out or for which they are responsible.

**Symbol(s)**

**Definition** A persona is an archetype that is representative of a customer segment and its main characteristics. Each persona provides a set of information describing that person in more detail.

**Symbol(s)**

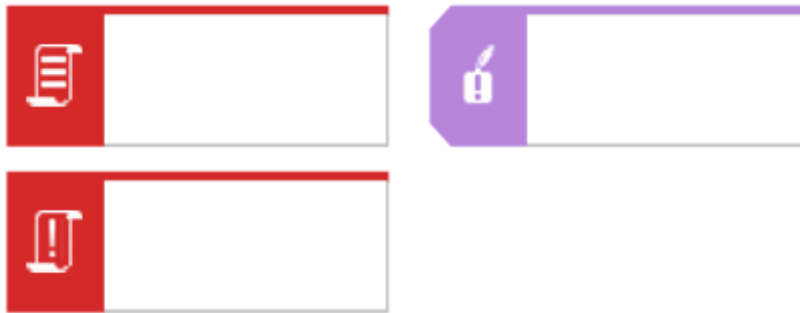

**Definition** Perspectives are views for looking at a company during strategic business planning.

**Symbol(s)**

Definition No help text is available for this object type.

Symbol(s)

Definition No help text is available for this object type.

Symbol(s)

Definition The smallest organizational unit in a company is a position. It is assigned to employees (persons). The authorities and responsibilities of a position are usually specified in so-called position descriptions.

Symbol(s)

Definition A process is a function that transforms data values. The result of a process depends on the behavior of the entire system.

Symbol(s)

Definition Describes a cell of a process support map.

Symbol(s)

Definition Products or services are generated or provided in the course of a value creation process. They are the result of a human act or a technical procedure. The term product/service refers to the supply of either services or products. Products can be material types, operating resource types, technical operating supply types, or packaging material types. The trigger for creating a product or service is always the demand of an organizational unit or a customer.

Symbol(s)

Definition No help text is available for this object type.

Definition By providing the corresponding stereotypes, a profile defines one or more meta model extensions that are thematically interrelated.

Definition No help text is available for this object type.

Definition A program library contains programs and/or program modules required for creating or performing a task.

**Definition** A program module is a program file on a storage medium obtained by purchasing a license (e.g., an EXE file or COM file). Usually it can be identified by a license number.

**Definition** A program module type is created by typifying program modules that are based on precisely the same technology.

**Definition** A programming language provides a set of commands and a syntax, enables the user to create programs, and can usually be identified by a license number.

**Definition** A network protocol represents a standardized communication and information exchange method for application systems in networks. It is possible to show which network protocols can be used for each network type.

**Definition** Is part of a section. It is possible to use a question in different sections. A question can also be used in different questionnaire templates.

**Symbol(s)**

**Definition** Describes the structure of a questionnaire that can be used in ARIS Risk & Compliance Manager.

A questionnaire is generated in ARIS Risk & Compliance Manager for all questionnaire templates for which the attribute Export relevant is set.

A questionnaire template can have multiple sections. A section may occur in one single questionnaire template only. It is not possible to reuse a section in various questionnaire templates.

**Symbol(s)**

Definition Supports modeling without any method restrictions in models of the Quick model type.

Symbol(s)

**Definition** Depending on the value selected in the Field type attribute, this screen element can be used either as a radio button or as a check box.

To offer users a given set of options, from which they are to select exactly one option, each option is represented as a radio button in the screen.

To offer users a given set of options, from which they can select multiple options, each of these options is shown as a check box.

**Definition** Describes the ability of a classifier to receive and process a specific signal. Receptions are modeled and represented like operations with the prefix «signal».

**Definition** A relation describes an entity type through its attributes. A relation is a subset of possible value range combinations of individual attributes.

**Definition** A relationship is a logical link between entities. Similar relationships can be combined to form a relationship type.

**Definition** A relationship is a logical link between entities. If similar relationships are grouped into sets, these are referred to as relationship types.

Relationships are of the same type if they can be described by the same attributes.

**Symbol(s)**

**Definition** A requirement is a documented need of what a specific application system, product, or service should be or do. Requirements are usually used in system and software engineering to describe features, attributes, capabilities, characteristics, and quality aspects. They are used to provide system users with the required functionality.

**Symbol(s)**

**Definition** No help text is available for this object type.

**Symbol(s)**

**Definition** A risk represents the possible danger of a defined process objective not being achieved.

**Symbol(s)**

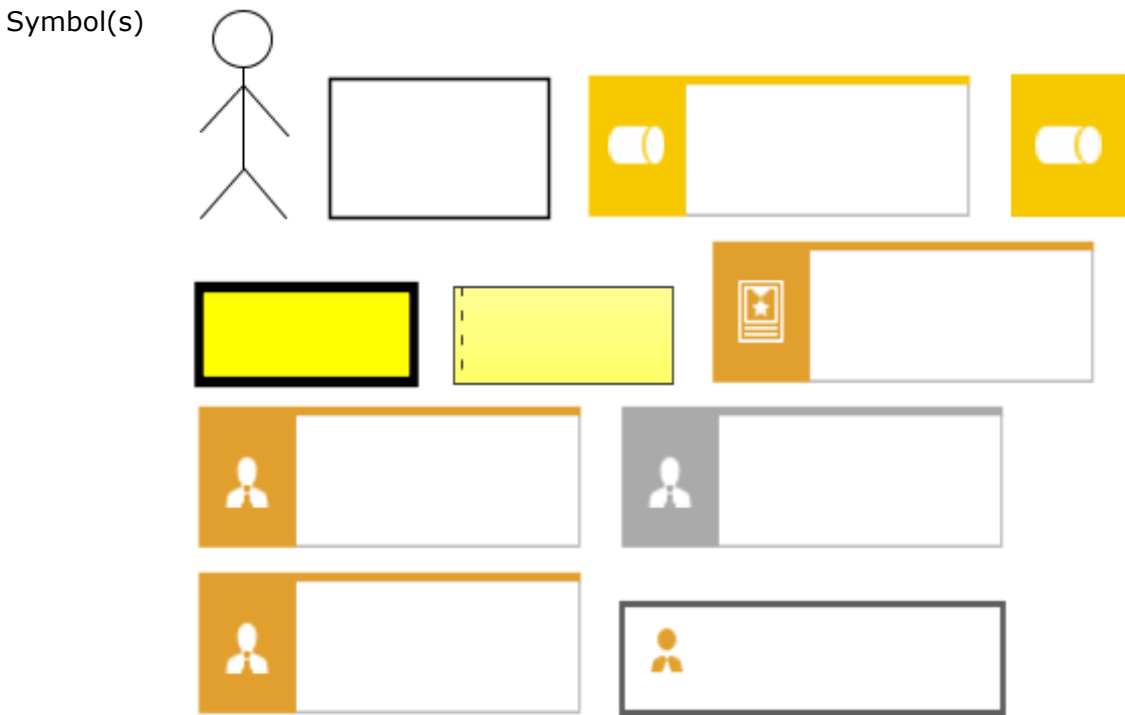

**Definition** A risk category is assigned individual risks in the risk diagram. It thus serves to classify risks.

**Definition** A role (employee type) typifies individual persons with identical properties. These properties can refer to similar privileges and responsibilities, for example. Accordingly, for example, division managers or workshop foremen are subject to responsibilities and rules that need to be defined only once if a corresponding typification exists.

**Definition** Rule instances represent operators at the instance level. They can be used to specify the logical link between function and event instances.

**Symbol(s)**

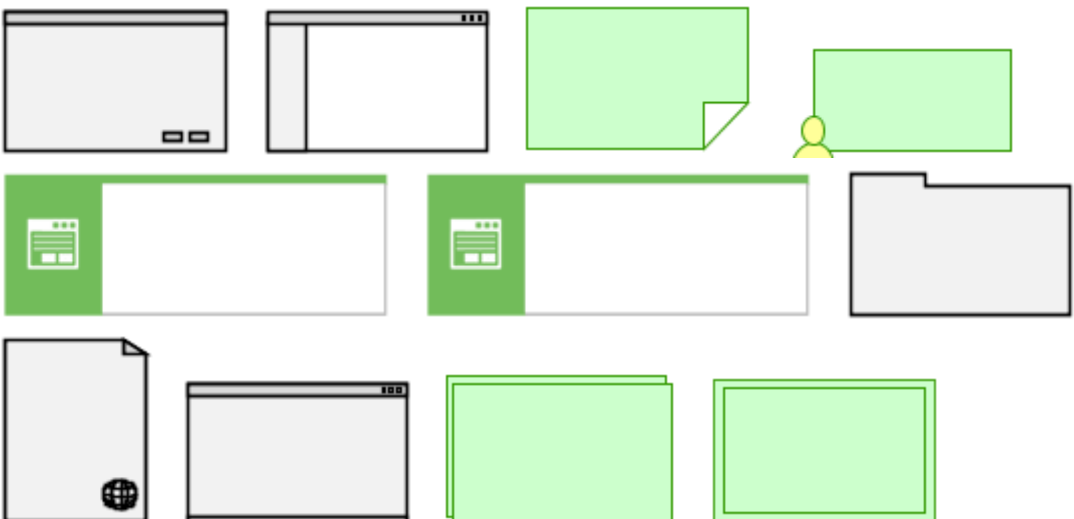

**Definition** A Schedule object represents a model of the Schedule or Composite schedule type and is usually assigned the model it references.

**Symbol(s)**

**Definition** Lists and screens represent communication interfaces between users and application systems. A screen is an input or output (presentation) medium used by an application system. Unlike a screen design, which - in the sense of a screen type - defines the structure of multiple similar screens, a screen is the concrete instance of the screen design.

**Symbol(s)**

**Definition** Represents a screen, i.e., a user interface (UI) as a stateless model as input for an implementation project.

It belongs to the Solution Design of a business process.

**Symbol(s)**

**Definition** A screen category enables you to assign individual screens to groups depending on the area of use of the screens.

**Symbol(s)**

**Definition** A screen design typifies individual screens with identical properties. The similarity can relate to the structure or content of the screen, for example.

**Symbol(s)**

**Definition** Using a screen table, attributes of a complex object type that have multivalent functional dependencies can be represented in one screen. For example, the screen table may assist you in managing customers for which more than one address exists (e.g., for different locations) in the customer master data. This means that a multivalent functional dependency exists between the Country, Zip code, City, Street, and Street no. attributes and the Customer no. key attribute.

Since a table itself can extend over several pages (like in Excel), the is divided into connection type is available in the screen diagram between the screen table and the page.

A page in a screen table must not be subdivided using the Section and Column object types. Only COT attributes may be assigned to a page in a screen table; they are realized as columns of the table page.

**Symbol(s)**

Definition In the screen diagram it is possible to structurally divide the interface into areas. The resulting rows are referred to as sections.

Symbol(s)

Definition Is part of a questionnaire template. A section can contain multiple subsections and questions. A subsection may have only one superior section.

Symbol(s)

Definition Represents an asymmetric protocol (public/private key procedure). Asymmetric protocols are protocols that are used to process transactions (data and/or money) securely on the Internet. They operate with two keys, i.e., a public key on the one hand, and a private key that can be decrypted only by the recipient on the other.

Symbol(s)

Definition No help text is available for this object type.

Symbol(s)

**Definition** Element types that are assigned via a sequence connector to the element type described must have a specific sequence within an element. The sequence is specified in the Sequence attribute of the connections that lead from the element types to the connector.

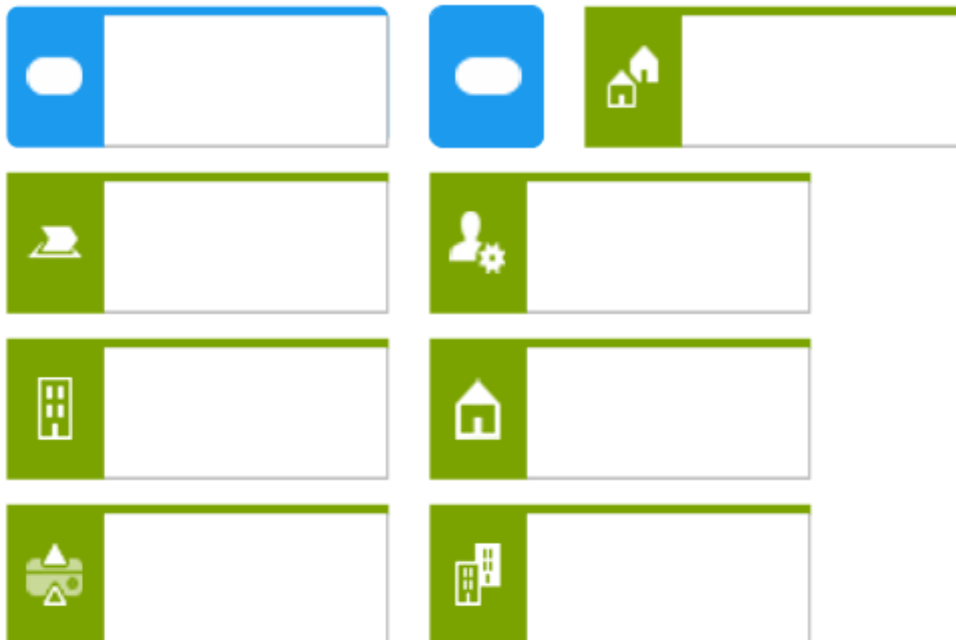

**Symbol(s)**

**Definition** Service types (formerly clusters) are used to organize an information system in independent units/blocks by function. Each service type is characterized in that it is the owner of the data it uses and of the associated processing methods. Other service types can access these data and processing methods only if they call a service of the owner service type.

Within a service type, similar data is used and identical activities and business functions are carried out.

**Symbol(s)**

**Definition** Shifts are object types of shift calendars. A shift is a time interval during which a human resource works daily or during which a technical resource is available to carry out functions. With this object type you can represent early and late shifts, day and night shifts, etc.

If a shift within a shift calendar is not assigned to any shift cycle, the shift will automatically restart every 24 hours during a simulation run. Interruptions of work during a shift are depicted using breaks.

**Symbol(s)** 

**Definition** Shift cycles are object types of shift calendars and define the organization of shifts. They are used to specify the days specific shifts are to be run. It is possible, for example, to define one-week or two-week shift cycles.

**Symbol(s)** 

**Definition** Shift plans are object types of shift calendars. A shift plan combines various shift cycles. This shows, for example, which shift cycles recur in which intervals. The sequence of early, late, and extra shifts can be specified, for example.

**Symbol(s)** 

**Definition** Signals are classifiers that are exchanged between instances in the form of asynchronous messages. The recipient of a signal processes the signal using a state machine.

**Definition** A socket corresponds to the IS service, i.e., it is an interface that an IT element provides for other IT elements so that these can access the IT element's data and processing methods.

**Definition** The sp./gen. operator (specialization/generalization operator) divides/combines similar classes.

**Definition** A spinbox is a screen element that is used in combination with a text box, in which a value can be entered from a list of discrete, sorted values. The correlation between text and spin box is controlled by the Tabindex attribute. Users can either enter the required value directly into the text box, use the arrow keys to increase or decrease a given numerical value by a fixed increment, or scroll cyclically through a list of preset values. Once the last value is reached when scrolling up a list, another click on the up arrow will display the first value of the list again. Similarly, when scrolling using the down arrow key, the first value of the list will switch to the last.

**Definition** A state is a group comprising sets of values. A state describes the reaction of an object to incoming events.

**Definition** Represents a state machine. A state machine describes all possible behaviors of a model element. A statechart diagram always visualizes exactly one state machine.

**Definition** Adds more properties to an existing metaclass, which will be specified individually by tag definitions.

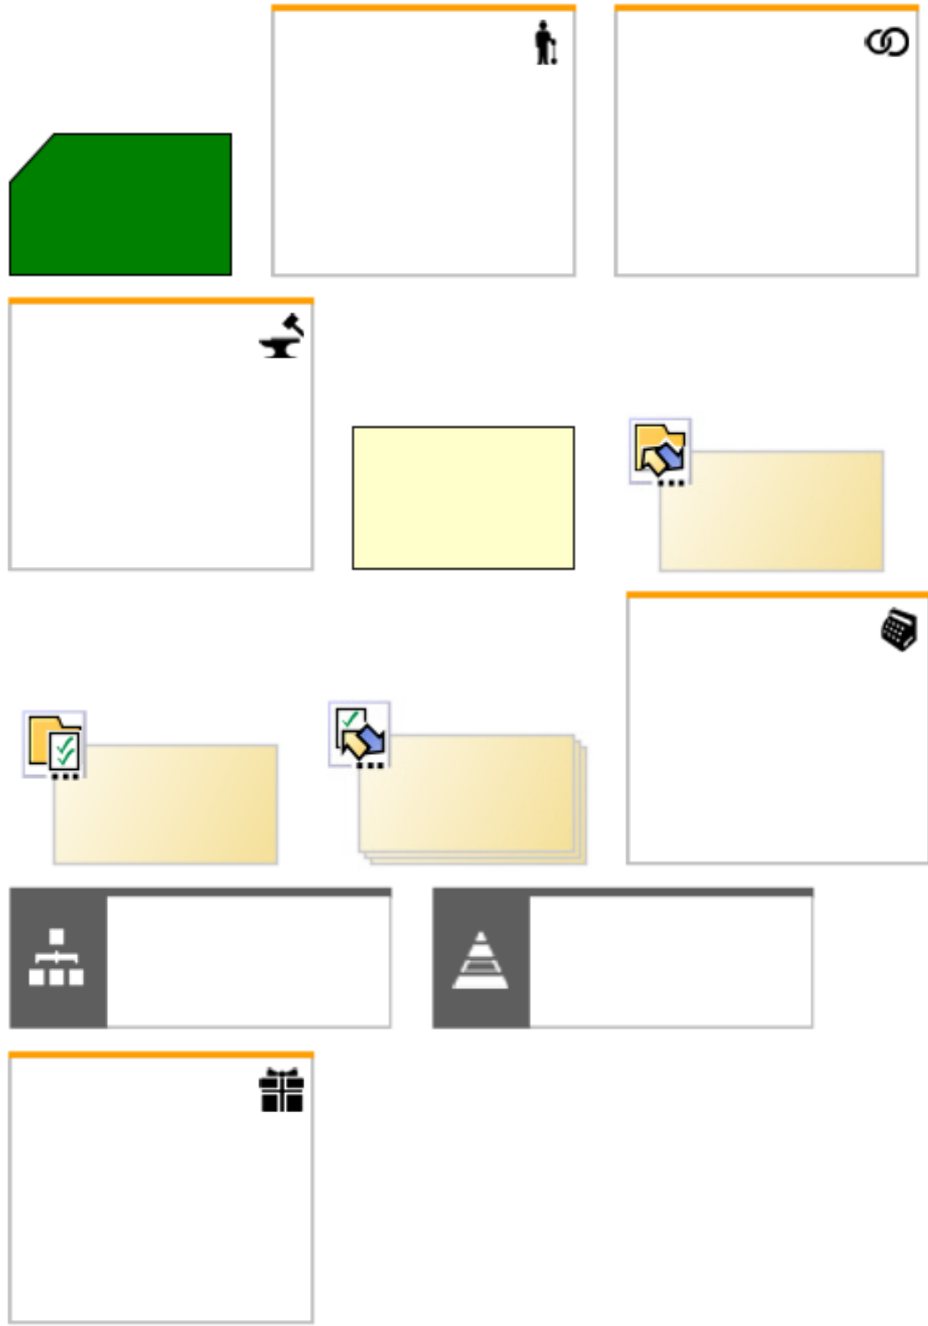

**Definition** A strategy is the fundamental long-term behavior (combination of measures) that a company and relevant corporate divisions employ towards the environment in order to realize long-term goals.

**Definition** Structural elements were originally introduced for the structuring model. In this model, structural elements are used to map structuring criteria and arrange them in a hierarchy. In BPMN, objects of the Structural element type are represented using the Group symbol. A group enables the user to categorize or emphasize objects in a model. Grouping does not influence the process flow.

**Symbol(s)**

Definition Represents a grouping of model elements that form a unit of behavior in a physical system.

Definition Represents the instance of a subsystem.

Definition Success factors specify the aspects that need to be considered in order to achieve a specific business objective. They are assigned to business objectives in the objective diagram.

**Definition** Is used to link a survey to a test case. A survey task that is linked to an export-relevant questionnaire template and a test definition is imported into ARIS Risk & Compliance Manager and displayed on the Assignments tab of the relevant test case.

**Definition** A system is a coherent combination of physical items, energy, and information set in relation to one another for a specific purpose.

**Definition** System attributes describe objects representing tasks that are associated with data export. They illustrate and manage interface-based data. In this context, the representation of primary keys, foreign keys, mandatory fields, and descriptive fields is possible.

**Definition** A system attribute domain describes the value range allowed for system attributes.

**Definition** Integrated application systems contain organizational structures that must be taken into account when implementing such a system in a company. These organizational structures can be modeled using the System organizational unit object type.

**Definition** A system organizational unit type typifies individual system organizational units with identical properties. These properties can refer to similar privileges in the corresponding application system, for example.

**Definition** System software represents software that provides or contributes to an environment for storing, executing, and using software or data deployed within it.

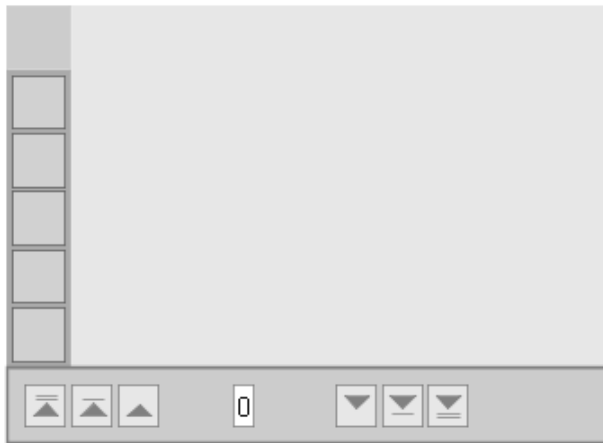

**Definition** The logical structure of database systems can be described by tables and table fields. A table typifies individual tables (specimens) with the same logical structure.

Definition Is used to describe a control that displays a data model as a table.

Symbol(s)

Definition A 'Table (specimen)' is an individual specimen of a table. Tables and fields define the logical structure of a database management system. Multiple specimens of logically defined tables and fields with exactly the same structure may exist in a company.

Symbol(s)

Definition Defines the properties of a stereotype. Model elements that are connected with this stereotype can assimilate further information in the form of tagged values.

Symbol(s)

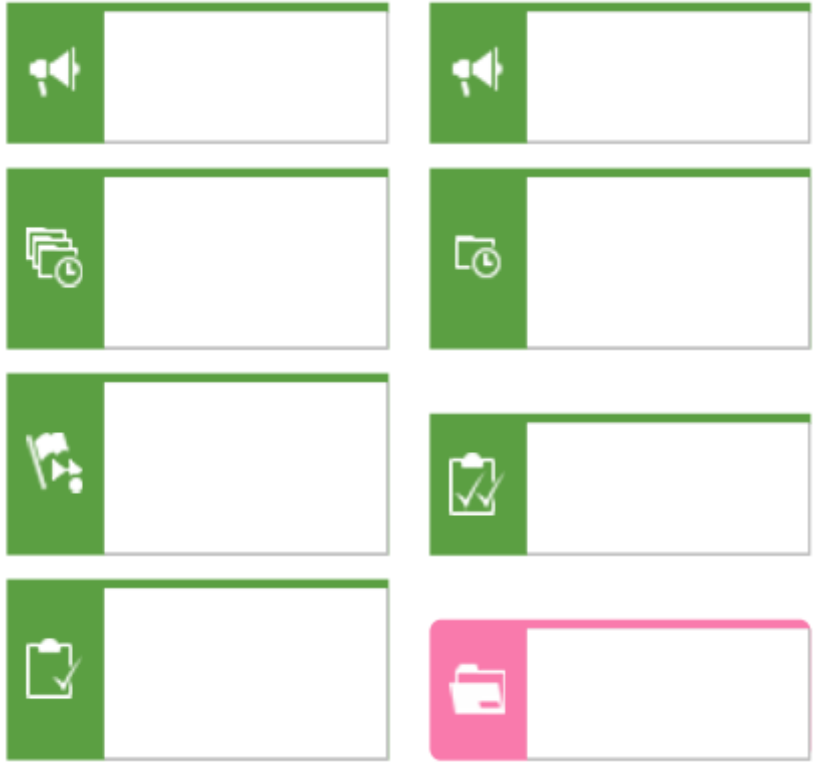

Definition Enables model elements to assimilate additional information.

Symbol(s)

**Definition** A task is a function that occurs in a specific process instance. It can be assigned a unique start and end time, as well as other required attributes.

**Symbol(s)**

**Definition** Similar technical operating supply types can be combined to form a technical operating supply class. The similarity can be based on different classification criteria. Thus, a technical operating supply type can be assigned to multiple technical operating supply classes.

**Symbol(s)**

**Definition** A technical operating supply is an individual specimen of a technical operating supply type. In general, it can be identified by means of an inventory number.

**Symbol(s)**

**Definition** A technical operating supply type typifies individual technical operating supply items that are based on precisely the same technology.

**Definition** Technical terms represent the terminology that exists in a company to describe the information objects under consideration.

**Definition** Technical term instances represent the instance level of technical terms.

**Definition** A technology service represents an explicitly defined exposed technology behavior.

**Definition** A test definition is used to describe control tests. Test activities, test frequencies, and test types are specified, for example.

**Definition** Enables you to enter text. You can use the corresponding symbol to distinguish between single-line and multi-line text.

**Definition** Objects of the Text types contain explanations that are displayed as static text in the current screen. The name of this kind of object should allow conclusions to be drawn regarding the content of the text. The text to be displayed is specified in the Full name attribute.

**Definition** Text annotations are artifacts that are used to insert additional textual information into a BPMN diagram. A text annotation object can be linked to an object in the diagram. Text annotations do not affect the process flow.

**Definition** A text box is a screen element in which you can enter text or edit displayed text. You can specify the text box more precisely using the Field type attribute type. If the text box is used as a standard or rich text box, you can use the Encoded attribute to specify whether the text entered is to be represented by asterisks, as is usual, for example when entering passwords.

**Definition** Describes the software, methods, or continuous training currently employed in the relevant process or to be used to improve the process and the integration into the overall system.

**Definition** No help text available.

Definition A transformation pattern consists of three transformation pattern components:

- Structure of the source model
- Structure of the target model
- Mapping model

Symbol(s)

Definition Transformation pattern components represent the basic components of a transformation pattern: source, target, and mapping model.

The source component describes the modeled structure within the model selected for the transformation. The target component describes the structure of the model to be created by the transformation. The mapping model describes the correlation among the attributes of various model items in the source and target structure.

Symbol(s)

Definition A transformation profile is a set of one or more transformation patterns.

It groups transformation patterns that belong to the same model transformation, but represent different variants of this transformation.

Symbol(s)

**Definition** A transport system is an individual specimen of a transport system type. In general, it can be identified by means of an inventory number or a plant number.

**Definition** Similar transport system types can be combined to form a transport system class. The similarity can be based on different classification criteria. Thus, a transport system type can be assigned to multiple transport system classes.

**Definition** A transport system type typifies individual transport systems that are based on precisely the same technology.

**Definition** A tree control displays a set of items in their hierarchical structure (in the form of a tree). You can add buttons to items within the control. The buttons can be used to open the view of subordinate items. You can also show lines in order to emphasize the hierarchical structures, and place check boxes in front of the individual items.

Definition Represents an abstract view of a physical system.

Definition An Abstraction is a Relationship that relates two Elements or sets of Elements that represent the same concept at different levels of abstraction or from different viewpoints.

Definition An AcceptCallAction is an AcceptEventAction that handles the receipt of a synchronous call request. In addition to the values from the Operation input parameters, the Action produces an output that is needed later to supply the information to the ReplyAction necessary to return control to the caller. An AcceptCallAction is for synchronous calls. If it is used to handle an asynchronous call, execution of the subsequent ReplyAction will complete immediately with no effect.

Definition A AcceptEventAction is an Action that waits for the occurrence of one or more specific Events.

**Definition** An ActionExecutionSpecification is a kind of ExecutionSpecification representing the execution of an Action.

**Definition** An ActionInputPin is a kind of InputPin that executes an Action to determine the values to input to another Action.

**Definition** An Activity is the specification of parameterized Behavior as the coordinated sequencing of subordinate units.

**Definition** An ActivityFinalNode is a FinalNode that terminates the execution of its owning Activity or StructuredActivityNode.

**Definition** An ActivityParameterNode is an ObjectNode for accepting values from the input Parameters or providing values to the output Parameters of an Activity.

**Definition** An ActivityPartition is a kind of ActivityGroup for identifying ActivityNodes that have some characteristic in common.

**Definition** An Actor specifies a role played by a user or any other system that interacts with the subject.

**Definition** An AddStructuralFeatureValueAction is a WriteStructuralFeatureAction for adding values to a StructuralFeature.

**Definition** An AddVariableValueAction is a WriteVariableAction for adding values to a Variable.

**Definition** A trigger for an AnyReceiveEvent is triggered by the receipt of any message that is not explicitly handled by any related trigger.

**Definition** An artifact is the specification of a physical piece of information that is used or produced by a software development process, or by deployment and operation of a system. Examples of artifacts include model files, source files, scripts, and binary executable files, a table in a database system, a development deliverable, or a word-processing document, a mail message.

An artifact is the source of a deployment to a node.

**Symbol(s)**

**Definition** A link is a tuple of values that refer to typed objects. An Association classifies a set of links, each of which is an instance of the Association. Each value in the link refers to an instance of the type of the corresponding end of the Association.

**Symbol(s)**

**Definition** A model element that has both Association and Class properties. An AssociationClass can be seen as an Association that also has Class properties, or as a Class that also has Association properties. It not only connects a set of Classifiers but also defines a set of Features that belong to the Association itself and not to any of the associated Classifiers.

**Symbol(s)**

**Definition** A BehaviorExecutionSpecification is a kind of ExecutionSpecification representing the execution of a Behavior.

**Symbol(s)**

**Definition** A BroadcastSignalAction is an InvocationAction that transmits a Signal instance to all the potential target objects in the system. Values from the argument InputPins are used to provide values for the attributes of the Signal. The requestor continues execution immediately after the Signal instances are sent out and cannot receive reply values.

**Symbol(s)**

**Definition** A CallBehaviorAction is a CallAction that invokes a Behavior directly. The argument values of the CallBehaviorAction are passed on the input Parameters of the invoked Behavior. If the call is synchronous, the execution of the CallBehaviorAction waits until the execution of the invoked Behavior completes and the values of output Parameters of the Behavior are placed on the result OutputPins. If the call is asynchronous, the CallBehaviorAction completes immediately and no results values can be provided.

**Symbol(s)**

**Definition** A CallEvent models the receipt by an object of a message invoking a call of an Operation.

**Symbol(s)**

**Definition** A CallOperationAction is a CallAction that transmits an Operation call request to the target object, where it may cause the invocation of associated Behavior. The argument values of the CallOperationAction are passed on the input Parameters of the Operation. If call is synchronous, the execution of the CallOperationAction waits until the execution of the invoked Operation completes and the values of output Parameters of the Operation are placed on the result OutputPins. If the call is asynchronous, the CallOperationAction completes immediately and no results values can be provided.

**Symbol(s)**

**Definition** A CentralBufferNode is an ObjectNode for managing flows from multiple sources and targets.

**Symbol(s)**

**Definition** A ChangeEvent models a change in the system configuration that makes a condition true.

**Symbol(s)**

**Definition** A Class classifies a set of objects and specifies the features that characterize the structure and behavior of those objects. A Class may have an internal structure and Ports.

**Symbol(s)**

**Definition** A ClassifierTemplateParameter exposes a Classifier as a formal template parameter.

**Definition** A Clause is an Element that represents a single branch of a ConditionalNode, including a test and a body section. The body section is executed only if (but not necessarily if) the test section evaluates to true.

**Definition** A ClearAssociationAction is an Action that destroys all links of an Association in which a particular object participates.

**Definition** A ClearStructuralFeatureAction is a StructuralFeatureAction that removes all values of a StructuralFeature.

**Definition** A ClearVariableAction is a VariableAction that removes all values of a Variable.

**Definition** A Collaboration describes a structure of collaborating elements (roles), each performing a specialized function, which collectively accomplish some desired functionality.

**Definition** A CollaborationUse is used to specify the application of a pattern specified by a Collaboration to a specific situation.

**Definition** A CombinedFragment defines an expression of InteractionFragments. A CombinedFragment is defined by an interaction operator and corresponding InteractionOperands. Through the use of CombinedFragments the user will be able to describe a number of traces in a compact and concise manner.

**Definition** A Comment is a textual annotation that can be attached to a set of Elements.

**Definition** A communication path is an association between two deployment targets, through which they are able to exchange signals and messages.

**Definition** A Component represents a modular part of a system that encapsulates its contents and whose manifestation is replaceable within its environment.

**Definition** Realization is specialized to (optionally) define the Classifiers that realize the contract offered by a Component in terms of its provided and required Interfaces. The Component forms an abstraction from these various Classifiers.

**Definition** A ConditionalNode is a StructuredActivityNode that chooses one among some number of alternative collections of ExecutableNodes to execute.

**Definition** ConnectableElement is an abstract metaclass representing a set of instances that play roles of a StructuredClassifier. ConnectableElements may be joined by attached Connectors and specify configurations of linked instances to be created within an instance of the containing StructuredClassifier.

**Definition** A `ConnectableElementTemplateParameter` exposes a `ConnectableElement` as a formal parameter for a template.

**Definition** A `ConnectionPointReference` represents a usage (as part of a submachine State) of an entry/exit point Pseudostate defined in the StateMachine referenced by the submachine State.

**Definition** A `Connector` specifies links that enables communication between two or more instances. In contrast to `Associations`, which specify links between any instance of the associated `Classifiers`, `Connectors` specify links between instances playing the connected parts only.

**Definition** A `ConnectorEnd` is an endpoint of a `Connector`, which attaches the `Connector` to a `ConnectableElement`.

**Definition** A ConsiderIgnoreFragment is a kind of CombinedFragment that is used for the consider and ignore cases, which require lists of pertinent Messages to be specified.

**Definition** A Constraint is a condition or restriction expressed in natural language text or in a machine readable language for the purpose of declaring some of the semantics of an Element or set of Elements.

**Definition** A Continuation is a syntactic way to define continuations of different branches of an alternative CombinedFragment. Continuations are intuitively similar to labels representing intermediate points in a flow of control.

**Definition** A ControlFlow is an ActivityEdge traversed by control tokens or object tokens of control type, which are use to control the execution of ExecutableNodes.

**Definition** A CreateLinkAction is a WriteLinkAction for creating links.

**Definition** A CreateLinkObjectAction is a CreateLinkAction for creating link objects (AssociationClasse instances).

**Definition** A CreateObjectAction is an Action that creates an instance of the specified Classifier.

**Definition** A DataStoreNode is a CentralBufferNode for persistent data.

**Definition** A DataType is a type whose instances are identified only by their value.

**Definition** A DecisionNode is a ControlNode that chooses between outgoing ActivityEdges for the routing of tokens.

**Definition** A Dependency is a Relationship that signifies that a single or a set of model Elements requires other model Elements for their specification or implementation. This means that the complete semantics of the client Element(s) are either semantically or structurally dependent on the definition of the supplier Element(s).

**Definition** A deployment is the allocation of an artifact or artifact instance to a deployment target.

A component deployment is the deployment of one or more artifacts or artifact instances to a deployment target, optionally parameterized by a deployment specification. Examples are executables and configuration files.

**Definition** A deployment specification specifies a set of properties that determine execution parameters of a component artifact that is deployed on a node. A deployment specification can be aimed at a specific type of container. An artifact that realizes or implements deployment specification properties is a deployment descriptor.

**Definition** A DestroyLinkAction is a WriteLinkAction that destroys links (including link objects).

Definition A DestroyObjectAction is an Action that destroys objects.

Definition A DestructionOccurrenceSpecification models the destruction of an object.

Definition A device is a physical computational resource with processing capability upon which artifacts may be deployed for execution. Devices may be complex (i.e., they may consist of other devices).

Definition A Duration is a ValueSpecification that specifies the temporal distance between two time instants.

Definition A DurationConstraint is a Constraint that refers to a DurationInterval.

Definition A DurationInterval defines the range between two Durations.

Definition A DurationObservation is a reference to a duration during an execution. It points out the NamedElement(s) in the model to observe and whether the observations are when this NamedElement is entered or when it is exited.

Definition An ElementImport identifies an Element in a different Namespace, and allows the Element to be referenced using its name without a qualifier in the Namespace owning the ElementImport.

Definition An Enumeration is a DataType whose values are enumerated in the model as EnumerationLiterals.

Definition An EnumerationLiteral is a user-defined data value for an Enumeration.

**Definition** An ExceptionHandler is an Element that specifies a handlerBody ExecutableNode to execute in case the specified exception occurs during the execution of the protected ExecutableNode.

**Symbol(s)**

**Definition** An execution environment is a node that offers an execution environment for specific types of components that are deployed on it in the form of executable artifacts.

**Symbol(s)**

**Definition** An ExecutionOccurrenceSpecification represents moments in time at which Actions or Behaviors start or finish.

**Symbol(s)**

**Definition** An ExpansionNode is an ObjectNode used to indicate a collection input or output for an ExpansionRegion. A collection input of an ExpansionRegion contains a collection that is broken into its individual elements inside the region, whose content is executed once per element. A collection output of an ExpansionRegion combines individual elements produced by the execution of the region into a collection for use outside the region.

**Symbol(s)**

**Definition** An ExpansionRegion is a StructuredActivityNode that executes its content multiple times corresponding to elements of input collection(s).

**Symbol(s)**

**Definition** An Expression represents a node in an expression tree, which may be non-terminal or terminal. It defines a symbol, and has a possibly empty sequence of operands that are ValueSpecifications. It denotes a (possibly empty) set of values when evaluated in a context.

**Symbol(s)**

**Definition** A relationship from an extending UseCase to an extended UseCase that specifies how and when the behavior defined in the extending UseCase can be inserted into the behavior defined in the extended UseCase.

**Symbol(s)**

**Definition** An extension is used to indicate that the properties of a metaclass are extended through a stereotype, and gives the ability to flexibly add (and later remove) stereotypes to classes.

**Symbol(s)**

**Definition** An extension end is used to tie an extension to a stereotype when extending a metaclass.

The default multiplicity of an extension end is 0..1.

**Symbol(s)**

**Definition** An ExtensionPoint identifies a point in the behavior of a UseCase where that behavior can be extended by the behavior of some other (extending) UseCase, as specified by an Extend relationship.

**Symbol(s)**

**Definition** A special kind of State, which, when entered, signifies that the enclosing Region has completed. If the enclosing Region is directly contained in a StateMachine and all other Regions in that StateMachine also are completed, then it means that the entire StateMachine behavior is completed.

**Symbol(s)**

**Definition** A FlowFinalNode is a FinalNode that terminates a flow by consuming the tokens offered to it.

**Symbol(s)**

Definition A ForkNode is a ControlNode that splits a flow into multiple concurrent flows.

Definition A FunctionBehavior is an OpaqueBehavior that does not access or modify any objects or other external data.

Definition A Gate is a MessageEnd which serves as a connection point for relating a Message which has a MessageEnd (sendEvent / receiveEvent) outside an Interaction-Fragment with another Message which has a MessageEnd (receiveEvent / send-Event) inside that InteractionFragment.

Definition A Generalization is a taxonomic relationship between a more general Classifier and a more specific Classifier. Each instance of the specific Classifier is also an instance of the general Classifier. The specific Classifier inherits the features of the more general Classifier. A Generalization is owned by the specific Classifier.

**Definition** A GeneralizationSet is a PackageableElement whose instances represent sets of Generalization relationships.

**Definition** A GeneralOrdering represents a binary relation between two OccurrenceSpecifications, to describe that one OccurrenceSpecification must occur before the other in a valid trace. This mechanism provides the ability to define partial orders of OccurrenceSpecifications that may otherwise not have a specified order.

**Definition** Physical definition of a graphical image.

**Definition** An Include relationship specifies that a UseCase contains the behavior defined in another UseCase.

**Definition** InformationFlows describe circulation of information through a system in a general manner. They do not specify the nature of the information, mechanisms by which it is conveyed, sequences of exchange or any control conditions. During more detailed modeling, representation and realization links may be added to specify which model elements implement an InformationFlow and to show how information is conveyed. InformationFlows require some kind of "information channel" for unidirectional transmission of information items from sources to targets. They specify the information channel's realizations, if any, and identify the information that flows along them. Information moving along the information channel may be represented by abstract InformationItems and by concrete Classifiers.

**Definition** InformationItems represent many kinds of information that can flow from sources to targets in very abstract ways. They represent the kinds of information that may move within a system, but do not elaborate details of the transferred information. Details of transferred information are the province of other Classifiers that may ultimately define InformationItems. Consequently, InformationItems cannot be instantiated and do not themselves have features, generalizations, or associations. An important use of InformationItems is to represent information during early design stages, possibly before the detailed modeling decisions that will ultimately define them have been made. Another purpose of InformationItems is to abstract portions of complex models in less precise, but perhaps more general and communicable, ways.

**Definition** An InitialNode is a ControlNode that offers a single control token when initially enabled.

**Definition** An InputPin is a Pin that holds input values to be consumed by an Action.

**Definition** An InstanceSpecification is a model element that represents an instance in a modeled system. An InstanceSpecification can act as a DeploymentTarget in a Deployment relationship, in the case that it represents an instance of a Node. It can also act as a DeployedArtifact, if it represents an instance of an Artifact.

**Definition** An InstanceValue is a ValueSpecification that identifies an instance.

**Definition** An Interaction is a unit of Behavior that focuses on the observable exchange of information between connectable elements.

**Definition** An InteractionConstraint is a Boolean expression that guards an operand in a CombinedFragment.

**Definition** An InteractionOperand is contained in a CombinedFragment. An Interaction-Operand represents one operand of the expression given by the enclosing CombinedFragment.

**Definition** An InteractionUse refers to an Interaction. The InteractionUse is a shorthand for copying the contents of the referenced Interaction where the InteractionUse is. To be accurate the copying must take into account substituting parameters with arguments and connect the formal Gates with the actual ones.

**Definition** Interfaces declare coherent services that are implemented by BehavedClassifiers that implement the Interfaces via InterfaceRealizations.

**Definition** An InterfaceRealization is a specialized realization relationship between a BehavedClassifier and an Interface. This relationship signifies that the realizing BehavedClassifier conforms to the contract specified by the Interface.

**Definition** An InterruptibleActivityRegion is an ActivityGroup that supports the termination of tokens flowing in the portions of an activity within it.

**Definition** An Interval defines the range between two ValueSpecifications.

**Definition** An IntervalConstraint is a Constraint that is specified by an Interval.

**Definition** A JoinNode is a ControlNode that synchronizes multiple flows.

**Definition** A Lifeline represents an individual participant in the Interaction. While parts and structural features may have multiplicity greater than 1, Lifelines represent only one interacting entity.

**Definition** LinkEndCreationData is LinkEndData used to provide values for one end of a link to be created by a CreateLinkAction.

**Definition** LinkEndData is an Element that identifies on end of a link to be read or written by a LinkAction. Since a link (that is not a link object) cannot be passed as a runtime value to or from an Action, it is instead identified by its end objects and qualifier values, if any. A LinkEndData instance provides these values for a single Association end.

**Definition** LinkEndDestructionData is LinkEndData used to provide values for one end of a link to be destroyed by a DestroyLinkAction.

**Definition** A LiteralBoolean is a specification of a Boolean value.

**Definition** A LiteralInteger is a specification of an Integer value.

Definition A LiteralNull specifies the lack of a value.

Symbol(s)

Definition A LiteralReal is a specification of a Real value.

Symbol(s)

Definition A LiteralString is a specification of a String value.

Symbol(s)

Definition A LiteralUnlimitedNatural is a specification of an UnlimitedNatural number.

Symbol(s)

Definition A LoopNode is a StructuredActivityNode that represents an iterative loop with setup, test, and body sections.

Symbol(s)

**Definition** A manifestation is the concrete physical rendering of one or more model elements by an artifact.

**Definition** A merge node is a control node that brings together multiple alternate flows. It is not used to synchronize concurrent flows but to accept one among several alternate flows.

**Definition** A Message defines a particular communication between Lifelines of an Interaction.

**Definition** A MessageOccurrenceSpecification specifies the occurrence of Message events, such as sending and receiving of Signals or invoking or receiving of Operation calls. A MessageOccurrenceSpecification is a kind of MessageEnd. Messages are generated either by synchronous Operation calls or asynchronous Signal sends. They are received by the execution of corresponding AcceptEventActions.

**Definition** A model captures a view of a physical system. It is an abstraction of the physical system, with a certain purpose. This purpose determines what is to be included in the model and what is irrelevant. Thus the model completely describes those aspects of the physical system that are relevant to the purpose of the model, at the appropriate level of detail.

**Definition** A node is computational resource upon which artifacts may be deployed for execution.

Nodes can be interconnected through communication paths to define network structures.

**Definition** An ObjectFlow is an ActivityEdge that is traversed by object tokens that may hold values. Object flows also support multicast/receive, token selection from object nodes, and transformation of tokens.

**Definition** An ObjectNode is an abstract ActivityNode that may hold tokens within the object flow in an Activity. ObjectNodes also support token selection, limitation on the number of tokens held, specification of the state required for tokens being held, and carrying control values.

**Definition** An OccurrenceSpecification is the basic semantic unit of Interactions. The sequences of occurrences specified by them are the meanings of Interactions.

**Definition** An OpaqueAction is an Action whose functionality is not specified within UML.

**Definition** An OpaqueBehavior is a Behavior whose specification is given in a textual language other than UML.

**Definition** An OpaqueExpression is a ValueSpecification that specifies the computation of a set of values either in terms of a UML Behavior or based on a textual statement in a language other than UML

**Definition** An Operation is a BehavioralFeature of a Classifier that specifies the name, type, parameters, and constraints for invoking an associated Behavior. An Operation may invoke both the execution of method behaviors as well as other behavioral responses. Operation specializes TemplateableElement in order to support specification of template operations and bound operations. Operation specializes ParameterableElement to specify that an operation can be exposed as a formal template parameter, and provided as an actual parameter in a binding of a template.

**Definition** An OperationTemplateParameter exposes an Operation as a formal parameter for a template.

**Definition** An OutputPin is a Pin that holds output values produced by an Action.

**Definition** A package can have one or more profile applications to indicate which profiles have been applied. Because a profile is a package, it is possible to apply a profile not only to packages, but also to profiles.

Package specializes TemplateableElement and PackageableElement specializes ParameterableElement to specify that a package can be used as a template and a PackageableElement as a template parameter.

A package is used to group elements, and provides a namespace for the grouped elements.

**Symbol(s)**

**Definition** A PackageImport is a Relationship that imports all the non-private members of a Package into the Namespace owning the PackageImport, so that those Elements may be referred to by their unqualified names in the importingNamespace.

**Symbol(s)**

**Definition** A package merge defines how the contents of one package are extended by the contents of another package.

**Symbol(s)**

**Definition** A Parameter is a specification of an argument used to pass information into or out of an invocation of a BehavioralFeature. Parameters can be treated as ConnectableElements within Collaborations.

**Symbol(s)**

**Definition** A ParameterSet designates alternative sets of inputs or outputs that a Behavior may use.

**Symbol(s)**

**Definition** A PartDecomposition is a description of the internal Interactions of one Lifeline relative to an Interaction.

**Symbol(s)**

**Definition** A Port is a property of an EncapsulatedClassifier that specifies a distinct interaction point between that EncapsulatedClassifier and its environment or between the (behavior of the) EncapsulatedClassifier and its internal parts. Ports are connected to Properties of the EncapsulatedClassifier by Connectors through which requests can be made to invoke BehavioralFeatures. A Port may specify the services an EncapsulatedClassifier provides (offers) to its environment as well as the services that an EncapsulatedClassifier expects (requires) of its environment. A Port may have an associated ProtocolStateMachine.

**Symbol(s)**

**Definition** A PrimitiveType defines a predefined DataType, without any substructure. A PrimitiveType may have an algebra and operations defined outside of UML, for example, mathematically.

**Symbol(s)**

**Definition** A profile defines limited extensions to a reference metamodel with the purpose of adapting the metamodel to a specific platform or domain.

**Definition** A profile application is used to show which profiles have been applied to a package.

**Definition** A Property is a StructuralFeature. A Property related by ownedAttribute to a Classifier (other than an association) represents an attribute and might also represent an association end. It relates an instance of the Classifier to a value or set of values of the type of the attribute. A Property related by memberEnd to an Association represents an end of the Association. The type of the Property is the type of the end of the Association. A Property has the capability of being a DeploymentTarget in a Deployment relationship. This enables modeling the deployment to hierarchical nodes that have Properties functioning as internal parts. Property specializes ParameterableElement to specify that a Property can be exposed as a formal template parameter, and provided as an actual parameter in a binding of a template.

**Definition** A ProtocolStateMachine can be redefined into a more specific ProtocolStateMa-  
chine or into behavioral StateMachine. ProtocolConformance declares that the  
specific ProtocolStateMachine specifies a protocol that conforms to the general  
ProtocolStateMachine or that the specific behavioral StateMachine abides by the  
protocol of the general ProtocolStateMachine.

**Symbol(s)**

**Definition** A ProtocolStateMachine is always defined in the context of a Classifier. It specifies  
which BehavioralFeatures of the Classifier can be called in which State and under  
which conditions, thus specifying the allowed invocation sequences on the Clas-  
sifier&apos;s BehavioralFeatures. A ProtocolStateMachine specifies the possible  
and permitted Transitions on the instances of its context Classifier, together with  
the BehavioralFeatures that carry the Transitions. In this manner, an instance  
lifecycle can be specified for a Classifier, by defining the order in which the Be-  
havioralFeatures can be activated and the States through which an instance  
progresses during its existence.

**Symbol(s)**

**Definition** A ProtocolTransition specifies a legal Transition for an Operation. Transitions of  
ProtocolStateMachines have the following information: a pre-condition (guard), a  
Trigger, and a post-condition. Every ProtocolTransition is associated with at most  
one BehavioralFeature belonging to the context Classifier of the ProtocolState-  
Machine.

**Symbol(s)**

**Definition** A Pseudostate is an abstraction that encompasses different types of transient Vertices in the StateMachine graph. A StateMachine instance never comes to rest in a Pseudostate, instead, it will exit and enter the Pseudostate within a single run-to-completion step.

**Definition** A QualifierValue is an Element that is used as part of LinkEndData to provide the value for a single qualifier of the end given by the LinkEndData.

**Definition** A RaiseExceptionAction is an Action that causes an exception to occur. The input value becomes the exception object.

**Definition** A ReadExtentAction is an Action that retrieves the current instances of a Classifier.

**Definition** A ReadIsClassifiedObjectAction is an Action that determines whether an object is classified by a given Classifier.

**Symbol(s)**

**Definition** A ReadLinkAction is a LinkAction that navigates across an Association to retrieve the objects on one end.

**Symbol(s)**

**Definition** A ReadLinkObjectEndAction is an Action that retrieves an end object from a link object.

**Symbol(s)**

**Definition** A ReadLinkObjectEndQualifierAction is an Action that retrieves a qualifier end value from a link object.

**Symbol(s)**

**Definition** A ReadSelfAction is an Action that retrieves the context object of the Behavior execution within which the ReadSelfAction execution is taking place.

**Symbol(s)**

**Definition** A ReadStructuralFeatureAction is a StructuralFeatureAction that retrieves the values of a StructuralFeature.

**Symbol(s)**

**Definition** A ReadVariableAction is a VariableAction that retrieves the values of a Variable.

**Symbol(s)**

**Definition** Realization is a specialized Abstraction relationship between two sets of model Elements, one representing a specification (the supplier) and the other represents an implementation of the latter (the client). Realization can be used to model stepwise refinement, optimizations, transformations, templates, model synthesis, framework composition, etc.

**Symbol(s)**

**Definition** A Reception is a declaration stating that a Classifier is prepared to react to the receipt of a Signal.

**Symbol(s)**

**Definition** A `ReclassifyObjectAction` is an Action that changes the Classifiers that classify an object.

**Definition** A `RedefinableTemplateSignature` supports the addition of formal template parameters in a specialization of a template classifier.

**Definition** A `ReduceAction` is an Action that reduces a collection to a single value by repeatedly combining the elements of the collection using a reducer Behavior.

**Definition** A `Region` is a top-level part of a `StateMachine` or a a composite `State`, that serves as a container for the `Vertices` and `Transitions` of the `StateMachine`. A `StateMachine` or composite `State` may contain multiple `Regions` representing behaviors that may occur in parallel.

**Definition** A `RemoveStructuralFeatureValueAction` is a `WriteStructuralFeatureAction` that removes values from a `StructuralFeature`.

**Definition** A RemoveVariableValueAction is a WriteVariableAction that removes values from a Variables.

**Symbol(s)**

**Definition** A ReplyAction is an Action that accepts a set of reply values and a value containing return information produced by a previous AcceptCallAction. The ReplyAction returns the values to the caller of the previous call, completing execution of the call.

**Symbol(s)**

**Definition** A SendObjectAction is an InvocationAction that transmits an input object to the target object, which is handled as a request message by the target object. The requestor continues execution immediately after the object is sent out and cannot receive reply values.

**Symbol(s)**

**Definition** A SendSignalAction is an InvocationAction that creates a Signal instance and transmits it to the target object. Values from the argument InputPins are used to provide values for the attributes of the Signal. The requestor continues execution immediately after the Signal instance is sent out and cannot receive reply values.

**Symbol(s)**

**Definition** A SequenceNode is a StructuredActivityNode that executes a sequence of ExecutableNodes in order.

**Definition** A Signal is a specification of a kind of communication between objects in which a reaction is asynchronously triggered in the receiver without a reply.

**Definition** A SignalEvent represents the receipt of an asynchronous Signal instance.

**Definition** A Slot designates that an entity modeled by an InstanceSpecification has a value or values for a specific StructuralFeature.

**Definition** A StartClassifierBehaviorAction is an Action that starts the classifierBehavior of the input object.

**Definition** A StartObjectBehaviorAction is an InvocationAction that starts the execution either of a directly instantiated Behavior or of the classifierBehavior of an object. Argument values may be supplied for the input Parameters of the Behavior. If the Behavior is invoked synchronously, then output values may be obtained for output Parameters.

**Symbol(s)**

**Definition** A State models a situation during which some (usually implicit) invariant condition holds. For behavior StateMachines, States are internal elements hidden from view of external parties. However, the states of ProtocolStateMachines are intended to be exposed to the users of their context Classifiers. A protocol State represents an exposed stable situation of its context classifier: when an instance of the Classifier is not processing any BehavioralFeature, external parties interacting with this instance can always know its State configuration.

**Symbol(s)**

**Definition** A StateInvariant is a runtime constraint on the participants of the Interaction. It may be used to specify a variety of different kinds of Constraints, such as values of Attributes or Variables, internal or external States, and so on. A StateInvariant is an InteractionFragment and it is placed on a Lifeline.

**Symbol(s)**

**Definition** StateMachines can be used to express event-driven behaviors of parts of a system. Behavior is modeled as a traversal of a graph of Vertices interconnected by one or more joined Transition arcs that are triggered by the dispatching of successive Event occurrences. During this traversal, the StateMachine may execute a sequence of Behaviors associated with various elements of the StateMachine.

**Definition** A stereotype defines how an existing metaclass may be extended, and enables the use of platform or domain specific terminology or notation in place of, or in addition to, the ones used for the extended metaclass.

**Definition** A StringExpression is an Expression that specifies a String value that is derived by concatenating a sequence of operands with String values or a sequence of subExpressions, some of which might be template parameters.

**Definition** A StructuredActivityNode is an Action that is also an ActivityGroup and whose behavior is specified by the ActivityNodes and ActivityEdges it so contains. Unlike other kinds of ActivityGroup, a StructuredActivityNode owns the ActivityNodes and ActivityEdges it contains, and so a node or edge can only be directly contained in one StructuredActivityNode, though StructuredActivityNodes may be nested.

**Definition** A substitution is a relationship between two classifiers signifies that the substituting classifier complies with the contract specified by the contract classifier. This implies that instances of the substituting classifier are runtime substitutable where instances of the contract classifier are expected.

**Definition** A TemplateBinding is a DirectedRelationship between a TemplateableElement and a template. A TemplateBinding specifies the TemplateParameterSubstitutions of actual parameters for the formal parameters of the template.

**Definition** A TemplateParameter exposes a ParameterableElement as a formal parameter of a template.

**Definition** A TemplateParameterSubstitution relates the actual parameter to a formal TemplateParameter as part of a template binding.

Definition A Template Signature bundles the set of formal TemplateParameters for a template.

Definition A TestIdentityAction is an Action that tests if two values are identical objects.

Definition A TimeConstraint is a Constraint that refers to a TimeInterval.

Definition A TimeEvent is an Event that occurs at a specific point in time.

Definition A TimeExpression is a ValueSpecification that represents a time value.

Definition A TimeInterval defines the range between two TimeExpressions.

Definition A TimeObservation is a reference to a time instant during an execution. It points out the NamedElement in the model to observe and whether the observation is when this NamedElement is entered or when it is exited.

Definition A Transition represents an arc between exactly one source Vertex and exactly one Target vertex (the source and targets may be the same Vertex). It may form part of a compound transition, which takes the StateMachine from one steady State configuration to another, representing the full response of the StateMachine to an occurrence of an Event that triggered it.

Definition A Trigger specifies a specific point at which an Event occurrence may trigger an effect in a Behavior. A Trigger may be qualified by the Port on which the Event occurred.

**Definition** An UnmarshallAction is an Action that retrieves the values of the StructuralFeatures of an object and places them on OutputPins.

**Definition** A Usage is a Dependency in which the client Element requires the supplier Element (or set of Elements) for its full implementation or operation.

**Definition** A UseCase specifies a set of actions performed by its subject, which yields an observable result that is of value for one or more Actors or other stakeholders of the subject.

**Definition** A ValuePin is an InputPin that provides a value by evaluating a ValueSpecification.

**Definition** A ValueSpecificationAction is an Action that evaluates a ValueSpecification and provides their result.

**Definition** A Variable is a ConnectableElement that may store values during the execution of an Activity. Reading and writing the values of a Variable provides an alternative means for passing data than the use of ObjectFlows. A Variable may be owned directly by an Activity, in which case it is accessible from anywhere within that activity, or it may be owned by a StructuredActivityNode, in which case it is only accessible within that node.

**Symbol(s)**

**Definition** Specifies the instance of a use case, which can also be called a scenario.

**Symbol(s)**

**Definition** A view is the logical view of multiple relations and attributes.

**Symbol(s)**

**Definition** A 'View (physical)' is a logical view of multiple tables and fields.

**Symbol(s)**

**Definition** Warehouse equipment items are specimens of various warehouse equipment types that are available for a company to perform its tasks. Warehouse equipment items are often identified by inventory numbers.

**Definition** Similar warehouse equipment types can be combined to form a warehouse equipment class. The similarity can be based on different classification criteria. Thus, a warehouse equipment type can be assigned to multiple warehouse equipment classes.

**Definition** A warehouse equipment type typifies individual warehouse equipments that are based on precisely the same technology.

**Definition** Only one of the element types assigned via an XOR rule to the element type described may occur within an element.

## 3.3.2 Object type specific attribute types

### 3.3.2.1 Action

Action	Name

### 3.3.2.294 UML2 Abstraction

UML2 Abstraction	Name
UML2 Abstraction	Description/Definition
UML2 Abstraction	Identifier
UML2 Abstraction	visibility
UML2 Abstraction	xmiId
UML2 Abstraction	externalLink

### 3.3.2.295 UML2 AcceptCallAction

UML2 AcceptCallAction	Name
UML2 AcceptCallAction	isUnmarshall
UML2 AcceptCallAction	isLeaf
UML2 AcceptCallAction	isLocallyReentrant
UML2 AcceptCallAction	Description/Definition
UML2 AcceptCallAction	Identifier
UML2 AcceptCallAction	visibility
UML2 AcceptCallAction	xmiId
UML2 AcceptCallAction	externalLink

### 3.3.2.296 UML2 AcceptEventAction

UML2 AcceptEventAction	Name
UML2 AcceptEventAction	isUnmarshall
UML2 AcceptEventAction	isLeaf
UML2 AcceptEventAction	isLocallyReentrant
UML2 AcceptEventAction	Description/Definition
UML2 AcceptEventAction	Identifier
UML2 AcceptEventAction	visibility
UML2 AcceptEventAction	xmiId
UML2 AcceptEventAction	externalLink

### 3.3.2.297 UML2 ActionExecutionSpecification

UML2 ActionExecutionSpecification	Name
UML2 ActionExecutionSpecification	Description/Definition
UML2 ActionExecutionSpecification	Identifier
UML2 ActionExecutionSpecification	visibility
UML2 ActionExecutionSpecification	xmiId
UML2 ActionExecutionSpecification	externalLink

### 3.3.2.298 UML2 ActionInputPin

UML2 ActionInputPin	Name
UML2 ActionInputPin	isUnique
UML2 ActionInputPin	isLeaf
UML2 ActionInputPin	isControlType
UML2 ActionInputPin	isControl
UML2 ActionInputPin	Description/Definition
UML2 ActionInputPin	ordering
UML2 ActionInputPin	Identifier
UML2 ActionInputPin	visibility
UML2 ActionInputPin	isOrdered
UML2 ActionInputPin	xmiId
UML2 ActionInputPin	externalLink

### 3.3.2.299 UML2 Activity

UML2 Activity	Name
UML2 Activity	isLeaf
UML2 Activity	isAbstract
UML2 Activity	isReentrant
UML2 Activity	isReadOnly
UML2 Activity	Description/Definition

UML2 Activity	Name
UML2 Activity	isSingleExecution
UML2 Activity	isActive
UML2 Activity	isFinalSpecialization
UML2 Activity	visibility
UML2 Activity	Identifier
UML2 Activity	xmiId
UML2 Activity	externalLink

### 3.3.2.300 UML2 ActivityFinalNode

UML2 ActivityFinalNode	Name
UML2 ActivityFinalNode	isLeaf
UML2 ActivityFinalNode	Description/Definition
UML2 ActivityFinalNode	Identifier
UML2 ActivityFinalNode	visibility
UML2 ActivityFinalNode	xmiId
UML2 ActivityFinalNode	externalLink

### 3.3.2.301 UML2 ActivityParameterNode

UML2 ActivityParameterNode	Name
UML2 ActivityParameterNode	isLeaf
UML2 ActivityParameterNode	isControlType
UML2 ActivityParameterNode	ordering
UML2 ActivityParameterNode	Description/Definition
UML2 ActivityParameterNode	Identifier
UML2 ActivityParameterNode	visibility
UML2 ActivityParameterNode	xmiId
UML2 ActivityParameterNode	externalLink

### 3.3.2.302 UML2 ActivityPartition

UML2 ActivityPartition	Name
UML2 ActivityPartition	isDimension
UML2 ActivityPartition	Description/Definition
UML2 ActivityPartition	isExternal
UML2 ActivityPartition	Identifier
UML2 ActivityPartition	visibility
UML2 ActivityPartition	xmiId
UML2 ActivityPartition	externalLink

### 3.3.2.303 UML2 Actor

UML2 Actor	Name
UML2 Actor	isLeaf
UML2 Actor	isAbstract
UML2 Actor	isFinalSpecialization
UML2 Actor	Description/Definition
UML2 Actor	Identifier
UML2 Actor	visibility
UML2 Actor	xmiId
UML2 Actor	externalLink

### 3.3.2.304 UML2 AddStructuralFeatureValueAction

UML2 AddStructuralFeatureValueAction	Name
UML2 AddStructuralFeatureValueAction	isLeaf
UML2 AddStructuralFeatureValueAction	isLocallyReentrant
UML2 AddStructuralFeatureValueAction	isReplaceAll
UML2 AddStructuralFeatureValueAction	Description/Definition
UML2 AddStructuralFeatureValueAction	Identifier
UML2 AddStructuralFeatureValueAction	visibility
UML2 AddStructuralFeatureValueAction	xmiId
UML2 AddStructuralFeatureValueAction	externalLink

### 3.3.2.305 UML2 AddVariableValueAction

UML2 AddVariableValueAction	Name
UML2 AddVariableValueAction	isReplaceAll
UML2 AddVariableValueAction	isLeaf
UML2 AddVariableValueAction	isLocallyReentrant
UML2 AddVariableValueAction	Description/Definition
UML2 AddVariableValueAction	Identifier
UML2 AddVariableValueAction	visibility
UML2 AddVariableValueAction	xmiId
UML2 AddVariableValueAction	externalLink

### 3.3.2.306 UML2 AnyReceiveEvent

UML2 AnyReceiveEvent	Name
UML2 AnyReceiveEvent	Description/Definition
UML2 AnyReceiveEvent	Identifier
UML2 AnyReceiveEvent	visibility
UML2 AnyReceiveEvent	xmiId
UML2 AnyReceiveEvent	externalLink

### 3.3.2.307 UML2 Artifact

UML2 Artifact	Name
UML2 Artifact	fileName
UML2 Artifact	isLeaf
UML2 Artifact	isAbstract
UML2 Artifact	isFinalSpecialization
UML2 Artifact	Description/Definition
UML2 Artifact	Identifier
UML2 Artifact	visibility
UML2 Artifact	xmiId
UML2 Artifact	externalLink

### 3.3.2.308 UML2 Association

UML2 Association	Name
UML2 Association	isLeaf
UML2 Association	isDerived
UML2 Association	isAbstract
UML2 Association	isFinalSpecialization
UML2 Association	Description/Definition
UML2 Association	Identifier
UML2 Association	visibility
UML2 Association	xmiId
UML2 Association	externalLink

### 3.3.2.309 UML2 AssociationClass

UML2 AssociationClass	Name
UML2 AssociationClass	isLeaf
UML2 AssociationClass	isDerived
UML2 AssociationClass	isAbstract

UML2 AssociationClass	Name
UML2 AssociationClass	isFinalSpecialization
UML2 AssociationClass	Description/Definition
UML2 AssociationClass	isActive
UML2 AssociationClass	Identifier
UML2 AssociationClass	visibility
UML2 AssociationClass	xmiId
UML2 AssociationClass	externalLink

### 3.3.2.310 UML2 BehaviorExecutionSpecification

UML2 BehaviorExecutionSpecification	Name
UML2 BehaviorExecutionSpecification	Description/Definition
UML2 BehaviorExecutionSpecification	Identifier
UML2 BehaviorExecutionSpecification	visibility
UML2 BehaviorExecutionSpecification	xmiId
UML2 BehaviorExecutionSpecification	externalLink

### 3.3.2.311 UML2 BroadcastSignalAction

UML2 BroadcastSignalAction	Name
UML2 BroadcastSignalAction	isLeaf
UML2 BroadcastSignalAction	isLocallyReentrant
UML2 BroadcastSignalAction	Description/Definition
UML2 BroadcastSignalAction	Identifier
UML2 BroadcastSignalAction	visibility
UML2 BroadcastSignalAction	xmiId
UML2 BroadcastSignalAction	externalLink

### 3.3.2.312 UML2 CallBehaviorAction

UML2 CallBehaviorAction	Name
UML2 CallBehaviorAction	isLeaf
UML2 CallBehaviorAction	isSynchronous
UML2 CallBehaviorAction	isLocallyReentrant
UML2 CallBehaviorAction	Description/Definition
UML2 CallBehaviorAction	Identifier
UML2 CallBehaviorAction	visibility
UML2 CallBehaviorAction	xmiId
UML2 CallBehaviorAction	externalLink

### 3.3.2.313 UML2 CallEvent

UML2 CallEvent	Name
UML2 CallEvent	Description/Definition
UML2 CallEvent	Identifier
UML2 CallEvent	visibility
UML2 CallEvent	xmiId
UML2 CallEvent	externalLink

### 3.3.2.314 UML2 CallOperationAction

UML2 CallOperationAction	Name
UML2 CallOperationAction	isLeaf
UML2 CallOperationAction	isSynchronous
UML2 CallOperationAction	isLocallyReentrant
UML2 CallOperationAction	Description/Definition
UML2 CallOperationAction	Identifier
UML2 CallOperationAction	visibility
UML2 CallOperationAction	xmiId
UML2 CallOperationAction	externalLink

### 3.3.2.315 UML2 CentralBufferNode

UML2 CentralBufferNode	Name
UML2 CentralBufferNode	isLeaf
UML2 CentralBufferNode	isControlType
UML2 CentralBufferNode	ordering
UML2 CentralBufferNode	Description/Definition
UML2 CentralBufferNode	Identifier
UML2 CentralBufferNode	visibility
UML2 CentralBufferNode	xmiId
UML2 CentralBufferNode	externalLink

### 3.3.2.316 UML2 ChangeEvent

UML2 ChangeEvent	Name
UML2 ChangeEvent	Description/Definition
UML2 ChangeEvent	Identifier
UML2 ChangeEvent	visibility
UML2 ChangeEvent	xmiId
UML2 ChangeEvent	externalLink

### 3.3.2.317 UML2 Class

UML2 Class	Name
UML2 Class	isLeaf
UML2 Class	isAbstract
UML2 Class	isFinalSpecialization
UML2 Class	Description/Definition
UML2 Class	isActive
UML2 Class	Identifier
UML2 Class	visibility
UML2 Class	xmiId

UML2 Class	Name
UML2 Class	externalLink

### 3.3.2.318 UML2 ClassifierTemplateParameter

UML2 ClassifierTemplateParameter	Name
UML2 ClassifierTemplateParameter	allowSubstitutable
UML2 ClassifierTemplateParameter	Description/Definition
UML2 ClassifierTemplateParameter	Identifier
UML2 ClassifierTemplateParameter	xmiId
UML2 ClassifierTemplateParameter	externalLink

### 3.3.2.319 UML2 Clause

UML2 Clause	Name
UML2 Clause	Description/Definition
UML2 Clause	Identifier
UML2 Clause	xmiId
UML2 Clause	externalLink

### 3.3.2.320 UML2 ClearAssociationAction

UML2 ClearAssociationAction	Name
UML2 ClearAssociationAction	isLeaf
UML2 ClearAssociationAction	isLocallyReentrant
UML2 ClearAssociationAction	Description/Definition
UML2 ClearAssociationAction	Identifier
UML2 ClearAssociationAction	visibility
UML2 ClearAssociationAction	xmiId
UML2 ClearAssociationAction	externalLink

### 3.3.2.321 UML2 ClearStructuralFeatureAction

UML2 ClearStructuralFeatureAction	Name
UML2 ClearStructuralFeatureAction	isLeaf
UML2 ClearStructuralFeatureAction	isLocallyReentrant
UML2 ClearStructuralFeatureAction	Description/Definition
UML2 ClearStructuralFeatureAction	Identifier
UML2 ClearStructuralFeatureAction	visibility
UML2 ClearStructuralFeatureAction	xmiId
UML2 ClearStructuralFeatureAction	externalLink

### 3.3.2.322 UML2 ClearVariableAction

UML2 ClearVariableAction	Name
UML2 ClearVariableAction	isLeaf
UML2 ClearVariableAction	isLocallyReentrant
UML2 ClearVariableAction	Description/Definition
UML2 ClearVariableAction	Identifier
UML2 ClearVariableAction	visibility
UML2 ClearVariableAction	xmiId
UML2 ClearVariableAction	externalLink

### 3.3.2.323 UML2 Collaboration

UML2 Collaboration	Name
UML2 Collaboration	isLeaf
UML2 Collaboration	isAbstract
UML2 Collaboration	isFinalSpecialization
UML2 Collaboration	Description/Definition
UML2 Collaboration	Identifier
UML2 Collaboration	visibility
UML2 Collaboration	xmiId
UML2 Collaboration	externalLink

### 3.3.2.324 UML2 CollaborationUse

UML2 CollaborationUse	Name
UML2 CollaborationUse	Description/Definition
UML2 CollaborationUse	Identifier
UML2 CollaborationUse	visibility
UML2 CollaborationUse	xmiId
UML2 CollaborationUse	externalLink

### 3.3.2.325 UML2 CombinedFragment

UML2 CombinedFragment	Name
UML2 CombinedFragment	interactionOperator
UML2 CombinedFragment	Description/Definition
UML2 CombinedFragment	Identifier
UML2 CombinedFragment	visibility
UML2 CombinedFragment	xmiId
UML2 CombinedFragment	externalLink

### 3.3.2.326 UML2 Comment

UML2 Comment	Name
UML2 Comment	body
UML2 Comment	Description/Definition
UML2 Comment	Identifier
UML2 Comment	xmiId
UML2 Comment	externalLink

### 3.3.2.327 UML2 CommunicationPath

UML2 CommunicationPath	Name
UML2 CommunicationPath	isLeaf
UML2 CommunicationPath	isDerived
UML2 CommunicationPath	isAbstract
UML2 CommunicationPath	isFinalSpecialization
UML2 CommunicationPath	Description/Definition
UML2 CommunicationPath	Identifier
UML2 CommunicationPath	visibility
UML2 CommunicationPath	xmiId
UML2 CommunicationPath	externalLink

### 3.3.2.328 UML2 Component

UML2 Component	Name
UML2 Component	isLeaf
UML2 Component	isAbstract
UML2 Component	isIndirectlyInstantiated
UML2 Component	isFinalSpecialization
UML2 Component	Description/Definition
UML2 Component	isActive
UML2 Component	Identifier
UML2 Component	visibility
UML2 Component	xmiId
UML2 Component	externalLink

### 3.3.2.329 UML2 ComponentRealization

UML2 ComponentRealization	Name
UML2 ComponentRealization	Description/Definition
UML2 ComponentRealization	Identifier
UML2 ComponentRealization	visibility
UML2 ComponentRealization	xmiId
UML2 ComponentRealization	externalLink

### 3.3.2.330 UML2 ConditionalNode

UML2 ConditionalNode	isAssured
UML2 ConditionalNode	Name
UML2 ConditionalNode	mustIsolate
UML2 ConditionalNode	isLeaf
UML2 ConditionalNode	isLocallyReentrant
UML2 ConditionalNode	isDeterminate
UML2 ConditionalNode	Description/Definition
UML2 ConditionalNode	Identifier
UML2 ConditionalNode	visibility
UML2 ConditionalNode	xmiId
UML2 ConditionalNode	externalLink

### 3.3.2.331 UML2 ConnectableElement

UML2 ConnectableElement	Name
UML2 ConnectableElement	Description/Definition
UML2 ConnectableElement	Identifier
UML2 ConnectableElement	visibility
UML2 ConnectableElement	xmiId
UML2 ConnectableElement	externalLink

### 3.3.2.332 UML2 ConnectableElementTemplateParameter

UML2 ConnectableElementTemplateParameter	Name
UML2 ConnectableElementTemplateParameter	Description/Definition
UML2 ConnectableElementTemplateParameter	Identifier
UML2 ConnectableElementTemplateParameter	xmiId
UML2 ConnectableElementTemplateParameter	externalLink

### 3.3.2.333 UML2 ConnectionPointReference

UML2 ConnectionPointReference	Name
UML2 ConnectionPointReference	Description/Definition
UML2 ConnectionPointReference	Identifier
UML2 ConnectionPointReference	visibility
UML2 ConnectionPointReference	xmiId
UML2 ConnectionPointReference	externalLink

### 3.3.2.334 UML2 Connector

UML2 Connector	Name
UML2 Connector	isLeaf
UML2 Connector	isStatic
UML2 Connector	Description/Definition
UML2 Connector	Identifier
UML2 Connector	visibility
UML2 Connector	xmiId
UML2 Connector	externalLink

### 3.3.2.335 UML2 ConnectorEnd

UML2 ConnectorEnd	Name
UML2 ConnectorEnd	isUnique
UML2 ConnectorEnd	Description/Definition
UML2 ConnectorEnd	Identifier
UML2 ConnectorEnd	isOrdered
UML2 ConnectorEnd	xmiId
UML2 ConnectorEnd	externalLink

### 3.3.2.336 UML2 ConsiderIgnoreFragment

UML2 ConsiderIgnoreFragment	Name
UML2 ConsiderIgnoreFragment	interactionOperator
UML2 ConsiderIgnoreFragment	Description/Definition
UML2 ConsiderIgnoreFragment	Identifier
UML2 ConsiderIgnoreFragment	visibility
UML2 ConsiderIgnoreFragment	xmiId
UML2 ConsiderIgnoreFragment	externalLink

### 3.3.2.337 UML2 Constraint

UML2 Constraint	Name
UML2 Constraint	Description/Definition
UML2 Constraint	Identifier
UML2 Constraint	visibility
UML2 Constraint	xmiId
UML2 Constraint	externalLink

### 3.3.2.338 UML2 Continuation

UML2 Continuation	Name
UML2 Continuation	setting
UML2 Continuation	Description/Definition
UML2 Continuation	Identifier
UML2 Continuation	visibility
UML2 Continuation	xmiId
UML2 Continuation	externalLink

### 3.3.2.339 UML2 ControlFlow

UML2 ControlFlow	Name
UML2 ControlFlow	isLeaf
UML2 ControlFlow	Description/Definition
UML2 ControlFlow	Identifier
UML2 ControlFlow	visibility
UML2 ControlFlow	xmiId
UML2 ControlFlow	externalLink

### 3.3.2.340 UML2 CreateLinkAction

UML2 CreateLinkAction	Name
UML2 CreateLinkAction	isLeaf
UML2 CreateLinkAction	isLocallyReentrant
UML2 CreateLinkAction	Description/Definition
UML2 CreateLinkAction	Identifier
UML2 CreateLinkAction	visibility
UML2 CreateLinkAction	xmiId
UML2 CreateLinkAction	externalLink

### 3.3.2.341 UML2 CreateLinkObjectAction

UML2 CreateLinkObjectAction	Name
UML2 CreateLinkObjectAction	isLeaf
UML2 CreateLinkObjectAction	isLocallyReentrant
UML2 CreateLinkObjectAction	Description/Definition
UML2 CreateLinkObjectAction	Identifier
UML2 CreateLinkObjectAction	visibility
UML2 CreateLinkObjectAction	xmiId
UML2 CreateLinkObjectAction	externalLink

### 3.3.2.342 UML2 CreateObjectAction

UML2 CreateObjectAction	Name
UML2 CreateObjectAction	isLeaf
UML2 CreateObjectAction	isLocallyReentrant
UML2 CreateObjectAction	Description/Definition
UML2 CreateObjectAction	Identifier
UML2 CreateObjectAction	visibility
UML2 CreateObjectAction	xmiId
UML2 CreateObjectAction	externalLink

### 3.3.2.343 UML2 DataStoreNode

UML2 DataStoreNode	Name
UML2 DataStoreNode	isLeaf
UML2 DataStoreNode	isControlType
UML2 DataStoreNode	ordering
UML2 DataStoreNode	Description/Definition
UML2 DataStoreNode	Identifier
UML2 DataStoreNode	visibility
UML2 DataStoreNode	xmiId
UML2 DataStoreNode	externalLink

### 3.3.2.344 UML2 DataType

UML2 DataType	Name
UML2 DataType	isLeaf
UML2 DataType	isAbstract
UML2 DataType	isFinalSpecialization
UML2 DataType	Description/Definition
UML2 DataType	Identifier
UML2 DataType	visibility
UML2 DataType	xmiId
UML2 DataType	externalLink

### 3.3.2.345 UML2 DecisionNode

UML2 DecisionNode	Name
UML2 DecisionNode	isLeaf
UML2 DecisionNode	Description/Definition
UML2 DecisionNode	Identifier
UML2 DecisionNode	visibility
UML2 DecisionNode	xmiId

UML2 DecisionNode	Name
UML2 DecisionNode	externalLink

### 3.3.2.346 UML2 Dependency

UML2 Dependency	Name
UML2 Dependency	Description/Definition
UML2 Dependency	Identifier
UML2 Dependency	visibility
UML2 Dependency	xmiId
UML2 Dependency	externalLink

### 3.3.2.347 UML2 Deployment

UML2 Deployment	Name
UML2 Deployment	Description/Definition
UML2 Deployment	Identifier
UML2 Deployment	visibility
UML2 Deployment	xmiId
UML2 Deployment	externalLink

### 3.3.2.348 UML2 DeploymentSpecification

UML2 DeploymentSpecification	Name
UML2 DeploymentSpecification	fileName
UML2 DeploymentSpecification	deploymentLocation
UML2 DeploymentSpecification	isLeaf
UML2 DeploymentSpecification	isAbstract
UML2 DeploymentSpecification	executionLocation
UML2 DeploymentSpecification	isFinalSpecialization
UML2 DeploymentSpecification	Description/Definition

UML2 DeploymentSpecification	Name
UML2 DeploymentSpecification	Identifier
UML2 DeploymentSpecification	visibility
UML2 DeploymentSpecification	xmiId
UML2 DeploymentSpecification	externalLink

### 3.3.2.349 UML2 DestroyLinkAction

UML2 DestroyLinkAction	Name
UML2 DestroyLinkAction	isLeaf
UML2 DestroyLinkAction	isLocallyReentrant
UML2 DestroyLinkAction	Description/Definition
UML2 DestroyLinkAction	Identifier
UML2 DestroyLinkAction	visibility
UML2 DestroyLinkAction	xmiId
UML2 DestroyLinkAction	externalLink

### 3.3.2.350 UML2 DestroyObjectAction

UML2 DestroyObjectAction	Name
UML2 DestroyObjectAction	isLeaf
UML2 DestroyObjectAction	isDestroyLinks
UML2 DestroyObjectAction	isLocallyReentrant
UML2 DestroyObjectAction	isDestroyOwnedObjects
UML2 DestroyObjectAction	Description/Definition
UML2 DestroyObjectAction	Identifier
UML2 DestroyObjectAction	visibility
UML2 DestroyObjectAction	xmiId
UML2 DestroyObjectAction	externalLink

### 3.3.2.351 UML2 DestructionOccurrenceSpecification

UML2 DestructionOccurrenceSpecification	Name
UML2 DestructionOccurrenceSpecification	Description/Definition
UML2 DestructionOccurrenceSpecification	Identifier
UML2 DestructionOccurrenceSpecification	visibility
UML2 DestructionOccurrenceSpecification	xmiId
UML2 DestructionOccurrenceSpecification	externalLink

### 3.3.2.352 UML2 Device

UML2 Device	Name
UML2 Device	isLeaf
UML2 Device	isAbstract
UML2 Device	isFinalSpecialization
UML2 Device	Description/Definition
UML2 Device	isActive
UML2 Device	Identifier
UML2 Device	visibility
UML2 Device	xmiId
UML2 Device	externalLink

### 3.3.2.353 UML2 Duration

UML2 Duration	Name
UML2 Duration	Description/Definition
UML2 Duration	Identifier
UML2 Duration	visibility
UML2 Duration	xmiId
UML2 Duration	externalLink

### 3.3.2.354 UML2 DurationConstraint

UML2 DurationConstraint	Name
UML2 DurationConstraint	firstEvent
UML2 DurationConstraint	Description/Definition
UML2 DurationConstraint	Identifier
UML2 DurationConstraint	visibility
UML2 DurationConstraint	xmiId
UML2 DurationConstraint	externalLink

### 3.3.2.355 UML2 DurationInterval

UML2 DurationInterval	Name
UML2 DurationInterval	Description/Definition
UML2 DurationInterval	Identifier
UML2 DurationInterval	visibility
UML2 DurationInterval	xmiId
UML2 DurationInterval	externalLink

### 3.3.2.356 UML2 DurationObservation

UML2 DurationObservation	Name
UML2 DurationObservation	firstEvent
UML2 DurationObservation	Description/Definition
UML2 DurationObservation	Identifier
UML2 DurationObservation	visibility
UML2 DurationObservation	xmiId
UML2 DurationObservation	externalLink

### 3.3.2.357 UML2 ElementImport

UML2 ElementImport	Name
UML2 ElementImport	alias
UML2 ElementImport	Description/Definition
UML2 ElementImport	visibility
UML2 ElementImport	Identifier
UML2 ElementImport	xmiId
UML2 ElementImport	externalLink

### 3.3.2.358 UML2 Enumeration

UML2 Enumeration	Name
UML2 Enumeration	isLeaf
UML2 Enumeration	isAbstract
UML2 Enumeration	isFinalSpecialization
UML2 Enumeration	Description/Definition
UML2 Enumeration	Identifier
UML2 Enumeration	visibility
UML2 Enumeration	xmiId
UML2 Enumeration	externalLink

### 3.3.2.359 UML2 EnumerationLiteral

UML2 EnumerationLiteral	Name
UML2 EnumerationLiteral	Description/Definition
UML2 EnumerationLiteral	Identifier
UML2 EnumerationLiteral	visibility
UML2 EnumerationLiteral	xmiId
UML2 EnumerationLiteral	externalLink

### 3.3.2.360 UML2 ExceptionHandler

UML2 ExceptionHandler	Name
UML2 ExceptionHandler	Description/Definition
UML2 ExceptionHandler	Identifier
UML2 ExceptionHandler	xmiId
UML2 ExceptionHandler	externalLink

### 3.3.2.361 UML2 ExecutionEnvironment

UML2 ExecutionEnvironment	Name
UML2 ExecutionEnvironment	isLeaf
UML2 ExecutionEnvironment	isAbstract
UML2 ExecutionEnvironment	isFinalSpecialization
UML2 ExecutionEnvironment	Description/Definition
UML2 ExecutionEnvironment	isActive
UML2 ExecutionEnvironment	Identifier
UML2 ExecutionEnvironment	visibility
UML2 ExecutionEnvironment	xmiId
UML2 ExecutionEnvironment	externalLink

### 3.3.2.362 UML2 ExecutionOccurrenceSpecification

UML2 ExecutionOccurrenceSpecification	Name
UML2 ExecutionOccurrenceSpecification	Description/Definition
UML2 ExecutionOccurrenceSpecification	Identifier
UML2 ExecutionOccurrenceSpecification	visibility
UML2 ExecutionOccurrenceSpecification	xmiId
UML2 ExecutionOccurrenceSpecification	externalLink

### 3.3.2.363 UML2 ExpansionNode

UML2 ExpansionNode	Name
UML2 ExpansionNode	isLeaf
UML2 ExpansionNode	isControlType
UML2 ExpansionNode	Description/Definition
UML2 ExpansionNode	ordering
UML2 ExpansionNode	Identifier
UML2 ExpansionNode	visibility
UML2 ExpansionNode	xmiId
UML2 ExpansionNode	externalLink

### 3.3.2.364 UML2 ExpansionRegion

UML2 ExpansionRegion	Name
UML2 ExpansionRegion	mustIsolate
UML2 ExpansionRegion	mode
UML2 ExpansionRegion	isLeaf
UML2 ExpansionRegion	isLocallyReentrant
UML2 ExpansionRegion	Description/Definition
UML2 ExpansionRegion	Identifier
UML2 ExpansionRegion	visibility
UML2 ExpansionRegion	xmiId
UML2 ExpansionRegion	externalLink

### 3.3.2.365 UML2 Expression

UML2 Expression	Name
UML2 Expression	symbol
UML2 Expression	Description/Definition
UML2 Expression	Identifier
UML2 Expression	visibility
UML2 Expression	xmiId
UML2 Expression	externalLink

### 3.3.2.366 UML2 Extend

UML2 Extend	Name
UML2 Extend	Description/Definition
UML2 Extend	Identifier
UML2 Extend	visibility
UML2 Extend	xmiId
UML2 Extend	externalLink

### 3.3.2.367 UML2 Extension

UML2 Extension	Name
UML2 Extension	isLeaf
UML2 Extension	isDerived
UML2 Extension	isAbstract
UML2 Extension	isFinalSpecialization
UML2 Extension	Description/Definition
UML2 Extension	Identifier
UML2 Extension	visibility
UML2 Extension	xmiId
UML2 Extension	externalLink

### 3.3.2.368 UML2 ExtensionEnd

UML2 ExtensionEnd	Name
UML2 ExtensionEnd	isUnique
UML2 ExtensionEnd	isLeaf
UML2 ExtensionEnd	isReadOnly
UML2 ExtensionEnd	isStatic
UML2 ExtensionEnd	aggregation
UML2 ExtensionEnd	Description/Definition
UML2 ExtensionEnd	visibility
UML2 ExtensionEnd	Identifier
UML2 ExtensionEnd	isOrdered
UML2 ExtensionEnd	xmiId
UML2 ExtensionEnd	isDerived
UML2 ExtensionEnd	externalLink
UML2 ExtensionEnd	isDerivedUnion
UML2 ExtensionEnd	isID

### 3.3.2.369 UML2 ExtensionPoint

UML2 ExtensionPoint	Name
UML2 ExtensionPoint	isLeaf
UML2 ExtensionPoint	Description/Definition
UML2 ExtensionPoint	Identifier
UML2 ExtensionPoint	visibility
UML2 ExtensionPoint	xmiId
UML2 ExtensionPoint	externalLink

### 3.3.2.370 UML2 FinalState

UML2 FinalState	Name
UML2 FinalState	isLeaf
UML2 FinalState	Description/Definition
UML2 FinalState	Identifier
UML2 FinalState	visibility
UML2 FinalState	xmiId
UML2 FinalState	externalLink

### 3.3.2.371 UML2 FlowFinalNode

UML2 FlowFinalNode	Name
UML2 FlowFinalNode	isLeaf
UML2 FlowFinalNode	Description/Definition
UML2 FlowFinalNode	Identifier
UML2 FlowFinalNode	visibility
UML2 FlowFinalNode	xmiId
UML2 FlowFinalNode	externalLink

### 3.3.2.372 UML2 ForkNode

UML2 ForkNode	Name
UML2 ForkNode	isLeaf
UML2 ForkNode	Description/Definition
UML2 ForkNode	Identifier
UML2 ForkNode	visibility
UML2 ForkNode	xmiId
UML2 ForkNode	externalLink

### 3.3.2.373 UML2 FunctionBehavior

UML2 FunctionBehavior	Name
UML2 FunctionBehavior	isLeaf
UML2 FunctionBehavior	isAbstract
UML2 FunctionBehavior	body
UML2 FunctionBehavior	isReentrant
UML2 FunctionBehavior	Description/Definition
UML2 FunctionBehavior	isActive
UML2 FunctionBehavior	language
UML2 FunctionBehavior	isFinalSpecialization
UML2 FunctionBehavior	visibility
UML2 FunctionBehavior	Identifier
UML2 FunctionBehavior	xmiId
UML2 FunctionBehavior	externalLink

### 3.3.2.374 UML2 Gate

UML2 Gate	Name
UML2 Gate	Description/Definition
UML2 Gate	Identifier
UML2 Gate	visibility
UML2 Gate	xmiId
UML2 Gate	externalLink

### 3.3.2.375 UML2 Generalization

UML2 Generalization	Name
UML2 Generalization	isSubstitutable
UML2 Generalization	Description/Definition
UML2 Generalization	Identifier
UML2 Generalization	xmiId
UML2 Generalization	externalLink

### 3.3.2.376 UML2 GeneralizationSet

UML2 GeneralizationSet	Name
UML2 GeneralizationSet	isCovering
UML2 GeneralizationSet	Description/Definition
UML2 GeneralizationSet	isDisjoint
UML2 GeneralizationSet	Identifier
UML2 GeneralizationSet	visibility
UML2 GeneralizationSet	xmiId
UML2 GeneralizationSet	externalLink

### 3.3.2.377 UML2 GeneralOrdering

UML2 GeneralOrdering	Name
UML2 GeneralOrdering	Description/Definition
UML2 GeneralOrdering	Identifier
UML2 GeneralOrdering	visibility
UML2 GeneralOrdering	xmiId
UML2 GeneralOrdering	externalLink

### 3.3.2.378 UML2 Image

UML2 Image	Name
UML2 Image	content
UML2 Image	imageKind
UML2 Image	Description/Definition
UML2 Image	format
UML2 Image	resizability
UML2 Image	Identifier
UML2 Image	location
UML2 Image	xmiId
UML2 Image	iconPosition
UML2 Image	externalLink
UML2 Image	textPosition

### 3.3.2.379 UML2 Include

UML2 Include	Name
UML2 Include	Description/Definition
UML2 Include	Identifier
UML2 Include	visibility
UML2 Include	xmiId
UML2 Include	externalLink

### 3.3.2.380 UML2 InformationFlow

UML2 InformationFlow	Name
UML2 InformationFlow	Description/Definition
UML2 InformationFlow	Identifier
UML2 InformationFlow	visibility
UML2 InformationFlow	xmiId
UML2 InformationFlow	externalLink

### 3.3.2.381 UML2 InformationItem

UML2 InformationItem	Name
UML2 InformationItem	isLeaf
UML2 InformationItem	isAbstract
UML2 InformationItem	isFinalSpecialization
UML2 InformationItem	Description/Definition
UML2 InformationItem	Identifier
UML2 InformationItem	visibility
UML2 InformationItem	xmiId
UML2 InformationItem	externalLink

### 3.3.2.382 UML2 InitialNode

UML2 InitialNode	Name
UML2 InitialNode	isLeaf
UML2 InitialNode	Description/Definition
UML2 InitialNode	Identifier
UML2 InitialNode	visibility
UML2 InitialNode	xmiId
UML2 InitialNode	externalLink

### 3.3.2.383 UML2 InputPin

UML2 InputPin	Name
UML2 InputPin	isUnique
UML2 InputPin	isLeaf
UML2 InputPin	isControlType
UML2 InputPin	isControl
UML2 InputPin	Description/Definition
UML2 InputPin	ordering
UML2 InputPin	Identifier

UML2 InputPin	Name
UML2 InputPin	visibility
UML2 InputPin	isOrdered
UML2 InputPin	xmiId
UML2 InputPin	externalLink

### 3.3.2.384 UML2 InstanceSpecification

UML2 InstanceSpecification	Name
UML2 InstanceSpecification	Description/Definition
UML2 InstanceSpecification	Identifier
UML2 InstanceSpecification	visibility
UML2 InstanceSpecification	xmiId
UML2 InstanceSpecification	externalLink

### 3.3.2.385 UML2 InstanceValue

UML2 InstanceValue	Name
UML2 InstanceValue	Description/Definition
UML2 InstanceValue	Identifier
UML2 InstanceValue	visibility
UML2 InstanceValue	xmiId
UML2 InstanceValue	externalLink

### 3.3.2.386 UML2 Interaction

UML2 Interaction	Name
UML2 Interaction	isLeaf
UML2 Interaction	isReentrant
UML2 Interaction	isAbstract
UML2 Interaction	isFinalSpecialization

UML2 Interaction	Name
UML2 Interaction	Description/Definition
UML2 Interaction	isActive
UML2 Interaction	Identifier
UML2 Interaction	visibility
UML2 Interaction	xmiId
UML2 Interaction	externalLink

### 3.3.2.387 UML2 InteractionConstraint

UML2 InteractionConstraint	Name
UML2 InteractionConstraint	Description/Definition
UML2 InteractionConstraint	Identifier
UML2 InteractionConstraint	visibility
UML2 InteractionConstraint	xmiId
UML2 InteractionConstraint	externalLink

### 3.3.2.388 UML2 InteractionOperand

UML2 InteractionOperand	Name
UML2 InteractionOperand	Description/Definition
UML2 InteractionOperand	Identifier
UML2 InteractionOperand	visibility
UML2 InteractionOperand	xmiId
UML2 InteractionOperand	externalLink

### 3.3.2.389 UML2 InteractionUse

UML2 InteractionUse	Name
UML2 InteractionUse	Description/Definition
UML2 InteractionUse	Identifier
UML2 InteractionUse	visibility
UML2 InteractionUse	xmiId
UML2 InteractionUse	externalLink

### 3.3.2.390 UML2 Interface

UML2 Interface	Name
UML2 Interface	isLeaf
UML2 Interface	isAbstract
UML2 Interface	isFinalSpecialization
UML2 Interface	Description/Definition
UML2 Interface	Identifier
UML2 Interface	visibility
UML2 Interface	xmiId
UML2 Interface	externalLink

### 3.3.2.391 UML2 InterfaceRealization

UML2 InterfaceRealization	Name
UML2 InterfaceRealization	Description/Definition
UML2 InterfaceRealization	Identifier
UML2 InterfaceRealization	visibility
UML2 InterfaceRealization	xmiId
UML2 InterfaceRealization	externalLink

### 3.3.2.392 UML2 InterruptibleActivityRegion

UML2 InterruptibleActivityRegion	Name
UML2 InterruptibleActivityRegion	Description/Definition
UML2 InterruptibleActivityRegion	Identifier
UML2 InterruptibleActivityRegion	visibility
UML2 InterruptibleActivityRegion	xmiId
UML2 InterruptibleActivityRegion	externalLink

### 3.3.2.393 UML2 Interval

UML2 Interval	Name
UML2 Interval	Description/Definition
UML2 Interval	Identifier
UML2 Interval	visibility
UML2 Interval	xmiId
UML2 Interval	externalLink

### 3.3.2.394 UML2 IntervalConstraint

UML2 IntervalConstraint	Name
UML2 IntervalConstraint	Description/Definition
UML2 IntervalConstraint	Identifier
UML2 IntervalConstraint	visibility
UML2 IntervalConstraint	xmiId
UML2 IntervalConstraint	externalLink

### 3.3.2.395 UML2 JoinNode

UML2 JoinNode	Name
UML2 JoinNode	isLeaf
UML2 JoinNode	isCombineDuplicate
UML2 JoinNode	Description/Definition
UML2 JoinNode	Identifier
UML2 JoinNode	visibility
UML2 JoinNode	xmiId
UML2 JoinNode	externalLink

### 3.3.2.396 UML2 Lifeline

UML2 Lifeline	Name
UML2 Lifeline	Description/Definition
UML2 Lifeline	Identifier
UML2 Lifeline	visibility
UML2 Lifeline	xmiId
UML2 Lifeline	externalLink

### 3.3.2.397 UML2 LinkEndCreationData

UML2 LinkEndCreationData	Name
UML2 LinkEndCreationData	isReplaceAll
UML2 LinkEndCreationData	Description/Definition
UML2 LinkEndCreationData	Identifier
UML2 LinkEndCreationData	xmiId
UML2 LinkEndCreationData	externalLink

### 3.3.2.398 UML2 LinkEndData

UML2 LinkEndData	Name
UML2 LinkEndData	Description/Definition
UML2 LinkEndData	Identifier
UML2 LinkEndData	xmiId
UML2 LinkEndData	externalLink

### 3.3.2.399 UML2 LinkEndDestructionData

UML2 LinkEndDestructionData	Name
UML2 LinkEndDestructionData	isDestroyDuplicates
UML2 LinkEndDestructionData	Description/Definition
UML2 LinkEndDestructionData	Identifier
UML2 LinkEndDestructionData	xmiId
UML2 LinkEndDestructionData	externalLink

### 3.3.2.400 UML2 LiteralBoolean

UML2 LiteralBoolean	value
UML2 LiteralBoolean	Name
UML2 LiteralBoolean	Description/Definition
UML2 LiteralBoolean	Identifier
UML2 LiteralBoolean	visibility
UML2 LiteralBoolean	xmiId
UML2 LiteralBoolean	externalLink

### 3.3.2.401 UML2 LiteralInteger

UML2 LiteralInteger	Name
UML2 LiteralInteger	value
UML2 LiteralInteger	Description/Definition
UML2 LiteralInteger	Identifier
UML2 LiteralInteger	visibility
UML2 LiteralInteger	xmiId
UML2 LiteralInteger	externalLink

### 3.3.2.402 UML2 LiteralNull

UML2 LiteralNull	Name
UML2 LiteralNull	Description/Definition
UML2 LiteralNull	Identifier
UML2 LiteralNull	visibility
UML2 LiteralNull	xmiId
UML2 LiteralNull	externalLink

### 3.3.2.403 UML2 LiteralReal

UML2 LiteralReal	Name
UML2 LiteralReal	value
UML2 LiteralReal	Description/Definition
UML2 LiteralReal	Identifier
UML2 LiteralReal	visibility
UML2 LiteralReal	xmiId
UML2 LiteralReal	externalLink

### 3.3.2.404 UML2 LiteralString

UML2 LiteralString	Name
UML2 LiteralString	value
UML2 LiteralString	Description/Definition
UML2 LiteralString	Identifier
UML2 LiteralString	visibility
UML2 LiteralString	xmiId
UML2 LiteralString	externalLink

### 3.3.2.405 UML2 LiteralUnlimitedNatural

UML2 LiteralUnlimitedNatural	Name
UML2 LiteralUnlimitedNatural	value
UML2 LiteralUnlimitedNatural	Description/Definition
UML2 LiteralUnlimitedNatural	Identifier
UML2 LiteralUnlimitedNatural	visibility
UML2 LiteralUnlimitedNatural	xmiId
UML2 LiteralUnlimitedNatural	externalLink

### 3.3.2.406 UML2 LoopNode

UML2 LoopNode	Name
UML2 LoopNode	mustIsolate
UML2 LoopNode	isLeaf
UML2 LoopNode	isLocallyReentrant
UML2 LoopNode	isTestedFirst
UML2 LoopNode	Description/Definition
UML2 LoopNode	Identifier
UML2 LoopNode	visibility
UML2 LoopNode	xmiId
UML2 LoopNode	externalLink

### 3.3.2.407 UML2 Manifestation

UML2 Manifestation	Name
UML2 Manifestation	Description/Definition
UML2 Manifestation	Identifier
UML2 Manifestation	visibility
UML2 Manifestation	xmiId
UML2 Manifestation	externalLink

### 3.3.2.408 UML2 MergeNode

UML2 MergeNode	Name
UML2 MergeNode	isLeaf
UML2 MergeNode	Description/Definition
UML2 MergeNode	Identifier
UML2 MergeNode	visibility
UML2 MergeNode	xmiId
UML2 MergeNode	externalLink

### 3.3.2.409 UML2 Message

UML2 Message	Name
UML2 Message	messageSort
UML2 Message	Description/Definition
UML2 Message	Identifier
UML2 Message	visibility
UML2 Message	xmiId
UML2 Message	externalLink

### 3.3.2.410 UML2 MessageOccurrenceSpecification

UML2 MessageOccurrenceSpecification	Name
UML2 MessageOccurrenceSpecification	Description/Definition
UML2 MessageOccurrenceSpecification	Identifier
UML2 MessageOccurrenceSpecification	visibility
UML2 MessageOccurrenceSpecification	xmiId
UML2 MessageOccurrenceSpecification	externalLink

### 3.3.2.411 UML2 Model

UML2 Model	Name
UML2 Model	URI
UML2 Model	viewpoint
UML2 Model	Description/Definition
UML2 Model	Identifier
UML2 Model	visibility
UML2 Model	xmiId
UML2 Model	externalLink

### 3.3.2.412 UML2 Node

UML2 Node	Name
UML2 Node	isLeaf
UML2 Node	isAbstract
UML2 Node	isFinalSpecialization
UML2 Node	Description/Definition
UML2 Node	isActive
UML2 Node	Identifier
UML2 Node	visibility
UML2 Node	xmiId
UML2 Node	externalLink

### 3.3.2.413 UML2 ObjectFlow

UML2 ObjectFlow	Name
UML2 ObjectFlow	isLeaf
UML2 ObjectFlow	isMulticast
UML2 ObjectFlow	isMultireceive
UML2 ObjectFlow	Description/Definition
UML2 ObjectFlow	Identifier
UML2 ObjectFlow	visibility
UML2 ObjectFlow	xmiId
UML2 ObjectFlow	externalLink

### 3.3.2.414 UML2 ObjectNode

UML2 ObjectNode	Name
UML2 ObjectNode	isLeaf
UML2 ObjectNode	isControlType
UML2 ObjectNode	Description/Definition
UML2 ObjectNode	ordering
UML2 ObjectNode	Identifier
UML2 ObjectNode	visibility
UML2 ObjectNode	xmiId
UML2 ObjectNode	externalLink

### 3.3.2.415 UML2 OccurrenceSpecification

UML2 OccurrenceSpecification	Name
UML2 OccurrenceSpecification	Description/Definition
UML2 OccurrenceSpecification	Identifier
UML2 OccurrenceSpecification	visibility
UML2 OccurrenceSpecification	xmiId
UML2 OccurrenceSpecification	externalLink

### 3.3.2.416 UML2 OpaqueAction

UML2 OpaqueAction	Name
UML2 OpaqueAction	isLeaf
UML2 OpaqueAction	body
UML2 OpaqueAction	isLocallyReentrant
UML2 OpaqueAction	Description/Definition
UML2 OpaqueAction	language
UML2 OpaqueAction	Identifier
UML2 OpaqueAction	visibility
UML2 OpaqueAction	xmiId
UML2 OpaqueAction	externalLink

### 3.3.2.417 UML2 OpaqueBehavior

UML2 OpaqueBehavior	Name
UML2 OpaqueBehavior	isLeaf
UML2 OpaqueBehavior	isAbstract
UML2 OpaqueBehavior	body
UML2 OpaqueBehavior	isReentrant
UML2 OpaqueBehavior	Description/Definition
UML2 OpaqueBehavior	isActive
UML2 OpaqueBehavior	language
UML2 OpaqueBehavior	isFinalSpecialization
UML2 OpaqueBehavior	visibility
UML2 OpaqueBehavior	Identifier
UML2 OpaqueBehavior	xmiId
UML2 OpaqueBehavior	externalLink

### 3.3.2.418 UML2 OpaqueExpression

UML2 OpaqueExpression	body
UML2 OpaqueExpression	Name
UML2 OpaqueExpression	language
UML2 OpaqueExpression	Description/Definition
UML2 OpaqueExpression	Identifier
UML2 OpaqueExpression	visibility
UML2 OpaqueExpression	xmiId
UML2 OpaqueExpression	externalLink

### 3.3.2.419 UML2 Operation

UML2 Operation	Name
UML2 Operation	isLeaf
UML2 Operation	isStatic
UML2 Operation	concurrency
UML2 Operation	isAbstract
UML2 Operation	isQuery
UML2 Operation	Description/Definition
UML2 Operation	Identifier
UML2 Operation	visibility
UML2 Operation	xmiId
UML2 Operation	externalLink

### 3.3.2.420 UML2 OperationTemplateParameter

UML2 OperationTemplateParameter	Name
UML2 OperationTemplateParameter	Description/Definition
UML2 OperationTemplateParameter	Identifier
UML2 OperationTemplateParameter	xmiId
UML2 OperationTemplateParameter	externalLink

### 3.3.2.421 UML2 OutputPin

UML2 OutputPin	Name
UML2 OutputPin	isUnique
UML2 OutputPin	isLeaf
UML2 OutputPin	isControlType
UML2 OutputPin	isControl
UML2 OutputPin	Description/Definition
UML2 OutputPin	ordering
UML2 OutputPin	Identifier
UML2 OutputPin	visibility
UML2 OutputPin	isOrdered
UML2 OutputPin	xmiId
UML2 OutputPin	externalLink

### 3.3.2.422 UML2 Package

UML2 Package	Name
UML2 Package	URI
UML2 Package	Description/Definition
UML2 Package	Identifier
UML2 Package	visibility
UML2 Package	xmiId
UML2 Package	externalLink

### 3.3.2.423 UML2 PackageImport

UML2 PackageImport	Name
UML2 PackageImport	visibility
UML2 PackageImport	Description/Definition
UML2 PackageImport	Identifier
UML2 PackageImport	xmiId

UML2 PackageImport	Name
UML2 PackageImport	externalLink

### 3.3.2.424 UML2 PackageMerge

UML2 PackageMerge	Name
UML2 PackageMerge	Description/Definition
UML2 PackageMerge	Identifier
UML2 PackageMerge	xmiId
UML2 PackageMerge	externalLink

### 3.3.2.425 UML2 Parameter

UML2 Parameter	Name
UML2 Parameter	isUnique
UML2 Parameter	Description/Definition
UML2 Parameter	direction
UML2 Parameter	effect
UML2 Parameter	Identifier
UML2 Parameter	visibility
UML2 Parameter	isOrdered
UML2 Parameter	isException
UML2 Parameter	xmiId
UML2 Parameter	isStream
UML2 Parameter	externalLink

### 3.3.2.426 UML2 ParameterSet

UML2 ParameterSet	Name
UML2 ParameterSet	Description/Definition
UML2 ParameterSet	Identifier
UML2 ParameterSet	visibility
UML2 ParameterSet	xmiId
UML2 ParameterSet	externalLink

### 3.3.2.427 UML2 PartDecomposition

UML2 PartDecomposition	Name
UML2 PartDecomposition	Description/Definition
UML2 PartDecomposition	Identifier
UML2 PartDecomposition	visibility
UML2 PartDecomposition	xmiId
UML2 PartDecomposition	externalLink

### 3.3.2.428 UML2 Port

UML2 Port	Name
UML2 Port	isUnique
UML2 Port	isLeaf
UML2 Port	isReadOnly
UML2 Port	isStatic
UML2 Port	aggregation
UML2 Port	isBehavior
UML2 Port	Description/Definition
UML2 Port	isConjugated
UML2 Port	visibility
UML2 Port	isService
UML2 Port	Identifier

UML2 Port	Name
UML2 Port	isOrdered
UML2 Port	xmiId
UML2 Port	isDerived
UML2 Port	externalLink
UML2 Port	isDerivedUnion
UML2 Port	isID

### 3.3.2.429 UML2 PrimitiveType

UML2 PrimitiveType	Name
UML2 PrimitiveType	isLeaf
UML2 PrimitiveType	isAbstract
UML2 PrimitiveType	isFinalSpecialization
UML2 PrimitiveType	Description/Definition
UML2 PrimitiveType	Identifier
UML2 PrimitiveType	visibility
UML2 PrimitiveType	xmiId
UML2 PrimitiveType	externalLink

### 3.3.2.430 UML2 Profile

UML2 Profile	Name
UML2 Profile	URI
UML2 Profile	Description/Definition
UML2 Profile	Identifier
UML2 Profile	visibility
UML2 Profile	xmiId
UML2 Profile	externalLink

### 3.3.2.431 UML2 ProfileApplication

UML2 ProfileApplication	Name
UML2 ProfileApplication	isStrict
UML2 ProfileApplication	Description/Definition
UML2 ProfileApplication	Identifier
UML2 ProfileApplication	xmiId
UML2 ProfileApplication	externalLink

### 3.3.2.432 UML2 Property

UML2 Property	Name
UML2 Property	isUnique
UML2 Property	isLeaf
UML2 Property	isReadOnly
UML2 Property	isStatic
UML2 Property	aggregation
UML2 Property	Description/Definition
UML2 Property	visibility
UML2 Property	Identifier
UML2 Property	isOrdered
UML2 Property	xmiId
UML2 Property	isDerived
UML2 Property	externalLink
UML2 Property	isDerivedUnion
UML2 Property	isID

### 3.3.2.433 UML2 ProtocolConformance

UML2 ProtocolConformance	Name
UML2 ProtocolConformance	Description/Definition
UML2 ProtocolConformance	Identifier
UML2 ProtocolConformance	xmiId
UML2 ProtocolConformance	externalLink

### 3.3.2.434 UML2 ProtocolStateMachine

UML2 ProtocolStateMachine	Name
UML2 ProtocolStateMachine	isLeaf
UML2 ProtocolStateMachine	isReentrant
UML2 ProtocolStateMachine	isAbstract
UML2 ProtocolStateMachine	isFinalSpecialization
UML2 ProtocolStateMachine	Description/Definition
UML2 ProtocolStateMachine	isActive
UML2 ProtocolStateMachine	Identifier
UML2 ProtocolStateMachine	visibility
UML2 ProtocolStateMachine	xmiId
UML2 ProtocolStateMachine	externalLink

### 3.3.2.435 UML2 ProtocolTransition

UML2 ProtocolTransition	kind
UML2 ProtocolTransition	Name
UML2 ProtocolTransition	isLeaf
UML2 ProtocolTransition	Description/Definition
UML2 ProtocolTransition	Identifier
UML2 ProtocolTransition	visibility
UML2 ProtocolTransition	xmiId
UML2 ProtocolTransition	externalLink

### 3.3.2.436 UML2 Pseudostate

UML2 Pseudostate	Name
UML2 Pseudostate	kind
UML2 Pseudostate	Description/Definition
UML2 Pseudostate	Identifier
UML2 Pseudostate	visibility
UML2 Pseudostate	xmiId
UML2 Pseudostate	externalLink

### 3.3.2.437 UML2 QualifierValue

UML2 QualifierValue	Name
UML2 QualifierValue	Description/Definition
UML2 QualifierValue	Identifier
UML2 QualifierValue	xmiId
UML2 QualifierValue	externalLink

### 3.3.2.438 UML2 RaiseExceptionAction

UML2 RaiseExceptionAction	Name
UML2 RaiseExceptionAction	isLeaf
UML2 RaiseExceptionAction	isLocallyReentrant
UML2 RaiseExceptionAction	Description/Definition
UML2 RaiseExceptionAction	Identifier
UML2 RaiseExceptionAction	visibility
UML2 RaiseExceptionAction	xmiId
UML2 RaiseExceptionAction	externalLink

### 3.3.2.439 UML2 ReadExtentAction

UML2 ReadExtentAction	Name
UML2 ReadExtentAction	isLeaf
UML2 ReadExtentAction	isLocallyReentrant
UML2 ReadExtentAction	Description/Definition
UML2 ReadExtentAction	Identifier
UML2 ReadExtentAction	visibility
UML2 ReadExtentAction	xmiId
UML2 ReadExtentAction	externalLink

### 3.3.2.440 UML2 ReadIsClassifiedObjectAction

UML2 ReadIsClassifiedObjectAction	Name
UML2 ReadIsClassifiedObjectAction	isDirect
UML2 ReadIsClassifiedObjectAction	isLeaf
UML2 ReadIsClassifiedObjectAction	isLocallyReentrant
UML2 ReadIsClassifiedObjectAction	Description/Definition
UML2 ReadIsClassifiedObjectAction	Identifier
UML2 ReadIsClassifiedObjectAction	visibility
UML2 ReadIsClassifiedObjectAction	xmiId
UML2 ReadIsClassifiedObjectAction	externalLink

### 3.3.2.441 UML2 ReadLinkAction

UML2 ReadLinkAction	Name
UML2 ReadLinkAction	isLeaf
UML2 ReadLinkAction	isLocallyReentrant
UML2 ReadLinkAction	Description/Definition
UML2 ReadLinkAction	Identifier
UML2 ReadLinkAction	visibility
UML2 ReadLinkAction	xmiId
UML2 ReadLinkAction	externalLink

### 3.3.2.442 UML2 ReadLinkObjectEndAction

UML2 ReadLinkObjectEndAction	Name
UML2 ReadLinkObjectEndAction	isLeaf
UML2 ReadLinkObjectEndAction	isLocallyReentrant
UML2 ReadLinkObjectEndAction	Description/Definition
UML2 ReadLinkObjectEndAction	Identifier
UML2 ReadLinkObjectEndAction	visibility
UML2 ReadLinkObjectEndAction	xmiId
UML2 ReadLinkObjectEndAction	externalLink

### 3.3.2.443 UML2 ReadLinkObjectEndQualifierAction

UML2 ReadLinkObjectEndQualifierAction	Name
UML2 ReadLinkObjectEndQualifierAction	isLeaf
UML2 ReadLinkObjectEndQualifierAction	isLocallyReentrant
UML2 ReadLinkObjectEndQualifierAction	Description/Definition
UML2 ReadLinkObjectEndQualifierAction	Identifier
UML2 ReadLinkObjectEndQualifierAction	visibility
UML2 ReadLinkObjectEndQualifierAction	xmiId
UML2 ReadLinkObjectEndQualifierAction	externalLink

### 3.3.2.444 UML2 ReadSelfAction

UML2 ReadSelfAction	Name
UML2 ReadSelfAction	isLeaf
UML2 ReadSelfAction	isLocallyReentrant
UML2 ReadSelfAction	Description/Definition
UML2 ReadSelfAction	Identifier
UML2 ReadSelfAction	visibility
UML2 ReadSelfAction	xmiId
UML2 ReadSelfAction	externalLink

### 3.3.2.445 UML2 ReadStructuralFeatureAction

UML2 ReadStructuralFeatureAction	Name
UML2 ReadStructuralFeatureAction	isLeaf
UML2 ReadStructuralFeatureAction	isLocallyReentrant
UML2 ReadStructuralFeatureAction	Description/Definition
UML2 ReadStructuralFeatureAction	Identifier
UML2 ReadStructuralFeatureAction	visibility
UML2 ReadStructuralFeatureAction	xmiId
UML2 ReadStructuralFeatureAction	externalLink

### 3.3.2.446 UML2 ReadVariableAction

UML2 ReadVariableAction	Name
UML2 ReadVariableAction	isLeaf
UML2 ReadVariableAction	isLocallyReentrant
UML2 ReadVariableAction	Description/Definition
UML2 ReadVariableAction	Identifier
UML2 ReadVariableAction	visibility
UML2 ReadVariableAction	xmiId
UML2 ReadVariableAction	externalLink

### 3.3.2.447 UML2 Realization

UML2 Realization	Name
UML2 Realization	Description/Definition
UML2 Realization	Identifier
UML2 Realization	visibility
UML2 Realization	xmiId
UML2 Realization	externalLink

### 3.3.2.448 UML2 Reception

UML2 Reception	Name
UML2 Reception	isLeaf
UML2 Reception	isStatic
UML2 Reception	concurrency
UML2 Reception	isAbstract
UML2 Reception	Description/Definition
UML2 Reception	Identifier
UML2 Reception	visibility
UML2 Reception	xmiId
UML2 Reception	externalLink

### 3.3.2.449 UML2 ReclassifyObjectAction

UML2 ReclassifyObjectAction	Name
UML2 ReclassifyObjectAction	isReplaceAll
UML2 ReclassifyObjectAction	isLeaf
UML2 ReclassifyObjectAction	isLocallyReentrant
UML2 ReclassifyObjectAction	Description/Definition
UML2 ReclassifyObjectAction	Identifier
UML2 ReclassifyObjectAction	visibility
UML2 ReclassifyObjectAction	xmiId
UML2 ReclassifyObjectAction	externalLink

### 3.3.2.450 UML2 RedefinableTemplateSignature

UML2 RedefinableTemplateSignature	Name
UML2 RedefinableTemplateSignature	isLeaf
UML2 RedefinableTemplateSignature	Description/Definition
UML2 RedefinableTemplateSignature	Identifier
UML2 RedefinableTemplateSignature	visibility
UML2 RedefinableTemplateSignature	xmiId
UML2 RedefinableTemplateSignature	externalLink

### 3.3.2.451 UML2 ReduceAction

UML2 ReduceAction	Name
UML2 ReduceAction	isOrdered
UML2 ReduceAction	isLeaf
UML2 ReduceAction	isLocallyReentrant
UML2 ReduceAction	Description/Definition
UML2 ReduceAction	Identifier
UML2 ReduceAction	visibility
UML2 ReduceAction	xmiId

UML2 ReduceAction	Name
UML2 ReduceAction	externalLink

### 3.3.2.452 UML2 Region

UML2 Region	Name
UML2 Region	isLeaf
UML2 Region	Description/Definition
UML2 Region	Identifier
UML2 Region	visibility
UML2 Region	xmiId
UML2 Region	externalLink

### 3.3.2.453 UML2 RemoveStructuralFeatureValueAction

UML2 RemoveStructuralFeatureValueAction	Name
UML2 RemoveStructuralFeatureValueAction	isLeaf
UML2 RemoveStructuralFeatureValueAction	isRemoveDuplicates
UML2 RemoveStructuralFeatureValueAction	isLocallyReentrant
UML2 RemoveStructuralFeatureValueAction	Description/Definition
UML2 RemoveStructuralFeatureValueAction	Identifier
UML2 RemoveStructuralFeatureValueAction	visibility
UML2 RemoveStructuralFeatureValueAction	xmiId
UML2 RemoveStructuralFeatureValueAction	externalLink

### 3.3.2.454 UML2 RemoveVariableValueAction

UML2 RemoveVariableValueAction	isRemoveDuplicates
UML2 RemoveVariableValueAction	Name
UML2 RemoveVariableValueAction	isLeaf
UML2 RemoveVariableValueAction	isLocallyReentrant
UML2 RemoveVariableValueAction	Description/Definition
UML2 RemoveVariableValueAction	Identifier
UML2 RemoveVariableValueAction	visibility
UML2 RemoveVariableValueAction	xmiId
UML2 RemoveVariableValueAction	externalLink

### 3.3.2.455 UML2 ReplyAction

UML2 ReplyAction	Name
UML2 ReplyAction	isLeaf
UML2 ReplyAction	isLocallyReentrant
UML2 ReplyAction	Description/Definition
UML2 ReplyAction	Identifier
UML2 ReplyAction	visibility
UML2 ReplyAction	xmiId
UML2 ReplyAction	externalLink

### 3.3.2.456 UML2 SendObjectAction

UML2 SendObjectAction	Name
UML2 SendObjectAction	isLeaf
UML2 SendObjectAction	isLocallyReentrant
UML2 SendObjectAction	Description/Definition
UML2 SendObjectAction	Identifier
UML2 SendObjectAction	visibility
UML2 SendObjectAction	xmiId
UML2 SendObjectAction	externalLink

### 3.3.2.457 UML2 SendSignalAction

UML2 SendSignalAction	Name
UML2 SendSignalAction	isLeaf
UML2 SendSignalAction	isLocallyReentrant
UML2 SendSignalAction	Description/Definition
UML2 SendSignalAction	Identifier
UML2 SendSignalAction	visibility
UML2 SendSignalAction	xmiId
UML2 SendSignalAction	externalLink

### 3.3.2.458 UML2 SequenceNode

UML2 SequenceNode	Name
UML2 SequenceNode	mustIsolate
UML2 SequenceNode	isLeaf
UML2 SequenceNode	isLocallyReentrant
UML2 SequenceNode	Description/Definition
UML2 SequenceNode	Identifier
UML2 SequenceNode	visibility
UML2 SequenceNode	xmiId
UML2 SequenceNode	externalLink

### 3.3.2.459 UML2 Signal

UML2 Signal	Name
UML2 Signal	isLeaf
UML2 Signal	isAbstract
UML2 Signal	isFinalSpecialization
UML2 Signal	Description/Definition
UML2 Signal	Identifier
UML2 Signal	visibility

UML2 Signal	Name
UML2 Signal	xmiId
UML2 Signal	externalLink

### 3.3.2.460 UML2 SignalEvent

UML2 SignalEvent	Name
UML2 SignalEvent	Description/Definition
UML2 SignalEvent	Identifier
UML2 SignalEvent	visibility
UML2 SignalEvent	xmiId
UML2 SignalEvent	externalLink

### 3.3.2.461 UML2 Slot

UML2 Slot	Name
UML2 Slot	Description/Definition
UML2 Slot	Identifier
UML2 Slot	xmiId
UML2 Slot	externalLink

### 3.3.2.462 UML2 StartClassifierBehaviorAction

UML2 StartClassifierBehaviorAction	Name
UML2 StartClassifierBehaviorAction	isLeaf
UML2 StartClassifierBehaviorAction	isLocallyReentrant
UML2 StartClassifierBehaviorAction	Description/Definition
UML2 StartClassifierBehaviorAction	Identifier
UML2 StartClassifierBehaviorAction	visibility
UML2 StartClassifierBehaviorAction	xmiId
UML2 StartClassifierBehaviorAction	externalLink

### 3.3.2.463 UML2 StartObjectBehaviorAction

UML2 StartObjectBehaviorAction	Name
UML2 StartObjectBehaviorAction	isLeaf
UML2 StartObjectBehaviorAction	isSynchronous
UML2 StartObjectBehaviorAction	isLocallyReentrant
UML2 StartObjectBehaviorAction	Description/Definition
UML2 StartObjectBehaviorAction	Identifier
UML2 StartObjectBehaviorAction	visibility
UML2 StartObjectBehaviorAction	xmiId
UML2 StartObjectBehaviorAction	externalLink

### 3.3.2.464 UML2 State

UML2 State	Name
UML2 State	isLeaf
UML2 State	Description/Definition
UML2 State	Identifier
UML2 State	visibility
UML2 State	xmiId
UML2 State	externalLink

### 3.3.2.465 UML2 StateInvariant

UML2 StateInvariant	Name
UML2 StateInvariant	Description/Definition
UML2 StateInvariant	Identifier
UML2 StateInvariant	visibility
UML2 StateInvariant	xmiId
UML2 StateInvariant	externalLink

### 3.3.2.466 UML2 StateMachine

UML2 StateMachine	Name
UML2 StateMachine	isLeaf
UML2 StateMachine	isReentrant
UML2 StateMachine	isAbstract
UML2 StateMachine	isFinalSpecialization
UML2 StateMachine	Description/Definition
UML2 StateMachine	isActive
UML2 StateMachine	Identifier
UML2 StateMachine	visibility
UML2 StateMachine	xmiId
UML2 StateMachine	externalLink

### 3.3.2.467 UML2 Stereotype

UML2 Stereotype	Name
UML2 Stereotype	isLeaf
UML2 Stereotype	isAbstract
UML2 Stereotype	isFinalSpecialization
UML2 Stereotype	Description/Definition
UML2 Stereotype	isActive
UML2 Stereotype	Identifier
UML2 Stereotype	visibility
UML2 Stereotype	xmiId
UML2 Stereotype	externalLink

### 3.3.2.468 UML2 StringExpression

UML2 StringExpression	Name
UML2 StringExpression	symbol
UML2 StringExpression	Description/Definition
UML2 StringExpression	Identifier
UML2 StringExpression	visibility
UML2 StringExpression	xmiId
UML2 StringExpression	externalLink

### 3.3.2.469 UML2 StructuredActivityNode

UML2 StructuredActivityNode	Name
UML2 StructuredActivityNode	mustIsolate
UML2 StructuredActivityNode	isLeaf
UML2 StructuredActivityNode	isLocallyReentrant
UML2 StructuredActivityNode	Description/Definition
UML2 StructuredActivityNode	Identifier
UML2 StructuredActivityNode	visibility
UML2 StructuredActivityNode	xmiId
UML2 StructuredActivityNode	externalLink

### 3.3.2.470 UML2 Substitution

UML2 Substitution	Name
UML2 Substitution	Description/Definition
UML2 Substitution	Identifier
UML2 Substitution	visibility
UML2 Substitution	xmiId
UML2 Substitution	externalLink

### 3.3.2.471 UML2 TemplateBinding

UML2 TemplateBinding	Name
UML2 TemplateBinding	Description/Definition
UML2 TemplateBinding	Identifier
UML2 TemplateBinding	xmiId
UML2 TemplateBinding	externalLink

### 3.3.2.472 UML2 TemplateParameter

UML2 TemplateParameter	Name
UML2 TemplateParameter	Description/Definition
UML2 TemplateParameter	Identifier
UML2 TemplateParameter	xmiId
UML2 TemplateParameter	externalLink

### 3.3.2.473 UML2 TemplateParameterSubstitution

UML2 TemplateParameterSubstitution	Name
UML2 TemplateParameterSubstitution	Description/Definition
UML2 TemplateParameterSubstitution	Identifier
UML2 TemplateParameterSubstitution	xmiId
UML2 TemplateParameterSubstitution	externalLink

### 3.3.2.474 UML2 TemplateSignature

UML2 TemplateSignature	Name
UML2 TemplateSignature	Description/Definition
UML2 TemplateSignature	Identifier
UML2 TemplateSignature	xmiId
UML2 TemplateSignature	externalLink

### 3.3.2.475 UML2 TestIdentityAction

UML2 TestIdentityAction	Name
UML2 TestIdentityAction	isLeaf
UML2 TestIdentityAction	isLocallyReentrant
UML2 TestIdentityAction	Description/Definition
UML2 TestIdentityAction	Identifier
UML2 TestIdentityAction	visibility
UML2 TestIdentityAction	xmiId
UML2 TestIdentityAction	externalLink

### 3.3.2.476 UML2 TimeConstraint

UML2 TimeConstraint	Name
UML2 TimeConstraint	firstEvent
UML2 TimeConstraint	Description/Definition
UML2 TimeConstraint	Identifier
UML2 TimeConstraint	visibility
UML2 TimeConstraint	xmiId
UML2 TimeConstraint	externalLink

### 3.3.2.477 UML2 TimeEvent

UML2 TimeEvent	isRelative
UML2 TimeEvent	Name
UML2 TimeEvent	Description/Definition
UML2 TimeEvent	Identifier
UML2 TimeEvent	visibility
UML2 TimeEvent	xmiId
UML2 TimeEvent	externalLink

### 3.3.2.478 UML2 TimeExpression

UML2 TimeExpression	Name
UML2 TimeExpression	Description/Definition
UML2 TimeExpression	Identifier
UML2 TimeExpression	visibility
UML2 TimeExpression	xmiId
UML2 TimeExpression	externalLink

### 3.3.2.479 UML2 TimeInterval

UML2 TimeInterval	Name
UML2 TimeInterval	Description/Definition
UML2 TimeInterval	Identifier
UML2 TimeInterval	visibility
UML2 TimeInterval	xmiId
UML2 TimeInterval	externalLink

### 3.3.2.480 UML2 TimeObservation

UML2 TimeObservation	Name
UML2 TimeObservation	firstEvent
UML2 TimeObservation	Description/Definition
UML2 TimeObservation	Identifier
UML2 TimeObservation	visibility
UML2 TimeObservation	xmiId
UML2 TimeObservation	externalLink

### 3.3.2.481 UML2 Transition

UML2 Transition	kind
UML2 Transition	Name
UML2 Transition	isLeaf
UML2 Transition	Description/Definition
UML2 Transition	Identifier
UML2 Transition	visibility
UML2 Transition	xmiId
UML2 Transition	externalLink

### 3.3.2.482 UML2 Trigger

UML2 Trigger	Name
UML2 Trigger	Description/Definition
UML2 Trigger	Identifier
UML2 Trigger	visibility
UML2 Trigger	xmiId
UML2 Trigger	externalLink

### 3.3.2.483 UML2 UnmarshallAction

UML2 UnmarshallAction	Name
UML2 UnmarshallAction	isLeaf
UML2 UnmarshallAction	isLocallyReentrant
UML2 UnmarshallAction	Description/Definition
UML2 UnmarshallAction	Identifier
UML2 UnmarshallAction	visibility
UML2 UnmarshallAction	xmiId
UML2 UnmarshallAction	externalLink

### 3.3.2.484 UML2 Usage

UML2 Usage	Name
UML2 Usage	Description/Definition
UML2 Usage	Identifier
UML2 Usage	visibility
UML2 Usage	xmiId
UML2 Usage	externalLink

### 3.3.2.485 UML2 UseCase

UML2 UseCase	Name
UML2 UseCase	isLeaf
UML2 UseCase	isAbstract
UML2 UseCase	isFinalSpecialization
UML2 UseCase	Description/Definition
UML2 UseCase	Identifier
UML2 UseCase	visibility
UML2 UseCase	xmiId
UML2 UseCase	externalLink

### 3.3.2.486 UML2 ValuePin

UML2 ValuePin	Name
UML2 ValuePin	isUnique
UML2 ValuePin	isLeaf
UML2 ValuePin	isControlType
UML2 ValuePin	isControl
UML2 ValuePin	Description/Definition
UML2 ValuePin	ordering
UML2 ValuePin	Identifier

UML2 ValuePin	Name
UML2 ValuePin	visibility
UML2 ValuePin	isOrdered
UML2 ValuePin	xmiId
UML2 ValuePin	externalLink

### 3.3.2.487 UML2 ValueSpecificationAction

UML2 ValueSpecificationAction	Name
UML2 ValueSpecificationAction	isLeaf
UML2 ValueSpecificationAction	isLocallyReentrant
UML2 ValueSpecificationAction	Description/Definition
UML2 ValueSpecificationAction	Identifier
UML2 ValueSpecificationAction	visibility
UML2 ValueSpecificationAction	xmiId
UML2 ValueSpecificationAction	externalLink

### 3.3.2.488 UML2 Variable

UML2 Variable	Name
UML2 Variable	isUnique
UML2 Variable	Description/Definition
UML2 Variable	Identifier
UML2 Variable	visibility
UML2 Variable	isOrdered
UML2 Variable	xmiId
UML2 Variable	externalLink

## 3.4 ARIS attribute types

### 3.4.1 Possible attribute values

Attribute type name	Data type	Maximum length
Aborts	Integer domain	10
Absolute change in MAC	Floating point number	7
Abstract type	One-liner	1000
Accumulated amount of damage reduction	Floating point number	20
Accumulated amount of damage reduction	Floating point number	20
Accumulated amount of damages	Floating point number	20
Accumulated amount of failed damage reduction	Floating point number	20
Accumulated amount of prevented damages	Floating point number	20
Accumulated amount of prevented damages	Floating point number	20
Accumulated amount of unprevented damages	Floating point number	20
Accumulated idle time	Duration	30
Accumulated interruption time during orientation	Duration	8
Accumulated interruption time during processing	Duration	8
Accumulated overtime	Duration	30
Accumulated scheduled time	Duration	30
Accuracy description text (information requirement)	Multi-line text	10000000
Achievement of objectives	Value	20
Acknowledgement	Value	64
Acknowledgement type	Value	64
Action	Multi-line text	100

can encompass	can belong to	161/CT_CAN_SUBS_3
can encompass	can belong to	249/CT_CAN_SUBS_4
can encompass	can belong to	25/CT_CAN_SUBS_1
can end in	can be end point of	157/CT_CAN_END_IN
can occur	can encompass	27/CT_CAN_OCC_1
can occur	can encompass	215/CT_CAN_OCC_2
can realize	can be realized at	135/CT_CAN_REAL
can replace	can be replaced by	411/CT_CAN_REPLACE
can run on	can be platform for	158/CT_CAN_RUN_ON
can run under	can be platform of	242/CT_CAN_EXEC_ON
can support	can be supported by	238/CT_CAN_SUPP_2
can trigger	can be triggered by	697/CT_BPMN_CAN_TRIGGER
can use	can be used by	243/CT_CAN_USE_2
can use	can be used by	125/CT_CAN_USE_1
carries out	is carried out by	218/CT_EXEC_2
carries out	is carried out by	65/CT_EXEC_1
changes	is changed by	224/CT_CHNG
changes	is changed by	670/CT_SAP_NW_CHANGES

Active name	Passive name	Type no./API name
classified by	is criterion of	114/CT_CLSF_BY
classifies	is classified	284/CT_CLSF
communicates with	communicates with	427/CT_COMM_WITH
concerns	is involved in	192/CT_CONC
concerns	is involved in	763/CT_CONC_3
concerns	is concerned by	888/CT_DMN_CONCERNS
configures	is configured by	749/CT_CONFIGURES
consists (hor.) of part of connection	encompasses part of connection	171/CT_CONS_OF_PRT_STR
consists (vert.) of section	encompasses section	172/CT_CONS_OF_PRT_SEC
consists of	consists of	716/CT_MOD_TRANSFORM_CONSISTS_OF
consists of	is component of	30/CT_CONS_OF_1
consists of	is part of	85/CT_CONS_OF_2
constrains	is constrained	204/CT_CNSTR
contains	is contained in	439/CT_CONTAINS_1
contains	is part of	791/CT_SURVEY_CONTAINS
contains	is contained by	421/CT_CONTAINS
contains	belongs to	615/CT_SAP_BW_CONTAINS
contains	belongs to	718/CT_MOD_TRANSFORM_XML_CONTAINS
contains	is contents of	461/CT_CONTAINS_2
contains	belongs to	431/CT_BELONG_CAT
contains external character in hierarchy	is external character in hierarchy	616/CT_SAP_BW_FOREIGN_CHARACTER_IN_HIER
contributes to	is worked on by collaboration of	324/CT_CONTR_TO_2
contributes to	is worked on by collaboration of	233/CT_CONTR_TO_1
cooperates with	cooperates with	296/CT_COLLAB_WITH
corresponds to	corresponds to	391/CT_CORRES
corresponds to	corresponds to	579/CT_SOLAR_CORRES

Active name	Passive name	Type no./API name
creates	is created by	330/CT_CRT_6
creates	is created by	454/CT_CREATES
creates	is created by	226/CT_CRT_5
creates	is created by	66/CT_CRT_3
creates	is created by	44/CT_CRT_1
creates	is created by	69/CT_CRT_4
creates	is created by	57/CT_CRT_2
creates output to	is output medium for	28/CT_CRT_OUT_TO
decides on	is decided by	232/CT_DECID_ON
decides on	is decided by	323/CT_DECD_ON
defers	is deferred	550/CT_DEFERS
defines	is defined by	103/CT_DEF
defines	is defined by	612/CT_DEF_1
defines	is defined by	447/CT_DEFINES
defines (aggregating)	is aggregating	105/CT_DEF_AGGR
defines (hierarchical)	is depending hierarchically	106/CT_DEF_HIER
defines an association	is defined by	189/CT_DEF_AN_ASSOC
defines screen field	has screen field	295/CT_DEF_MASK_ENTR
defines status	is defined	273/CT_DEF_STATE
deletes	is deleted by	227/CT_DEL
delivers	is delivered by	757/CT_DELIVERS_2
delivers data to	receives data from	592/CT_BW_PROVIDES_DATA
delivers master data to	receives master data from	591/CT_BW_PROVIDES_MASTER_DATA
depends	is depending	425/CT_DEPENDS
depends on	has dependency	748/CT_DEPENDS_ON_2
depicts	is depicted by	113/CT_DEPICTS_2
depicts	is depicted by	84/CT_DEPICTS_1
deploys	is deployed by	779/CT_DEPLOYS
deploys	is deployed	555/CT_DEPLOY

Active name	Passive name	Type no./API name
describes	is described by	688/CT_DESCRIBES
describes	is described by	751/CT_DESCRIBES_2
designs	is designed by	372/CT_IS_REPR_BY_2
determines volume of	volume is dependent on	448/CT_DETERM_AMOUN
differentiates according to value of	is characteristic for	268/CT_DIFF
distributes	is distributed by	228/CT_DISTR
effects enforcement level of	has enforcement level effected by	778/CT_EFFECTS_ENFORCEMENT_LEVEL_OF
enables	is enabled by	772/CT_ENABLES
encompasses	belongs to	845/CT_ENCOMPASSES
encompasses	belongs to	239/CT_SUBS_5
encompasses	belongs to	67/CT_SUBS_1
encompasses	belongs to	174/CT_SUBS_4
encompasses	is part of	112/CT_SUBS_2
encompasses	belongs to	155/CT_CAN_SUBS_2
encompasses	belongs to	449/CT_INCLUDES
encompasses	is located at	150/CT_SUBS_3
encompasses	belongs to	883/CT_IOT_ENCOMPASSES
ends in	is end of	170/CT_END_IN
exhibits	is exhibited	747/CT_EXHIBITS
experiences	is experienced by	889/CT_EXPERIENCES
extends	is extended	489/CT_EXTEND
forms an incoming reference with	has reference to	107/CT_HAS_REL_REF
from	to	599/CT_BPEL_FROM
fulfills	is fulfilled	745/CT_FULFILS
generalizes	specializes	415/CT_GENERAL
governs	is governed by	776/CT_GOVERNS_1
governs and measures	is governed and measured by	759/CT_GOVERNS

Active name	Passive name	Type no./API name
has	belongs to	699/CT_BPMN_HAS
has	is assigned to	121/CT_HAS_2
has	is assigned to	796/CT_SURVEY_HAS
has	belongs to	96/CT_HAS_1
has activation bar	is activation bar of	569/CT_HAS_ACTIVATION_B AR
has any number of times	may occur	497/CT_MAY_OCCUR
has argument	is argument of	534/CT_HAS_ARGU
has as output	is decision output of	873/CT_DMN_HAS_AS_OUTP UT
has as output	is output of	50/CT_HAS_OUT
has as output event	is output event of	885/CT_IOT_OUTPUT_EVT
has assigned	is assigned to	328/CT_HAS_ASSIG_1
has assigned attribute	is assigned attribute of	614/CT_SAP_BW_ALLOCATED _ATTRIBUTES
has at disposal	is available at	646/CT_BW_IS_AVAILABLE
has at disposal	is available at	452/CT_IS_AVAILABLE
has at least once	must occur at least once	498/CT_REQ_AT_LEAST_1
has at most once	may occur at most once	499/CT_OPT_MAX_1
has attribute	is attribute of	187/CT_HAS_ATTR
has base	is base of	529/CT_HAS_BASE
has behavior	is behavior of	544/CT_HAS_BEHAV
has carried out	was carried out by	384/CT_HAS_EXEC
has consulting role in	is supported by consulting role of	358/CT_HAS_CONSLT_ROLE_ IN_2
has consulting role in	is supported by consulting role of	355/CT_HAS_CONSLT_ROLE_ IN_1
has current location	is current location of	303/CT_HAS_CUR_LOC
has enumeration literal	is enumeration literal of	513/CT_HAS_ENUM_LIT
has exactly once	must occur exactly once	500/CT_EXACTLY_1
has extension point	is extension point of	512/CT_HAS_EXT_PT
has FIFO lane to	has FIFO lane from	739/CT_VMS_FIFO

Active name	Passive name	Type no./API name
has flow to	receives flow from	526/CT_HAS_FLOW_TO
has flow to	has flow from	668/CT_ARCHIMATE_EXCHN G_INFO
has instance	is instance	419/CT_HAS_INSTANCE
has instance	is instance of	321/CT_HAS_INST
has link to	has link to	83/CT_HAS_LINK_TO
has mandatory field	is mandatory field	130/CT_HAS_MAND_FIELD
has member	is member of	293/CT_HAS_MEMB
has member	is member of	420/CT_HAS_MEMBER
has method	is method for	251/CT_HAS_METH
has normal influence on	is normally influenced by	483/CT_HAS_NORMAL_INFL
has operation	is operation of	188/CT_HAS_OPR
has output from	is output from	839/CT_HAS_OUTPUT_FROM
has parameter	is parameter of	877/CT_DMN_HAS_PARAMET ER
has parameter	is parameter of	510/CT_HAS_PARA
has participating instance	participates	564/CT_HAS_PART_INST
has partition	is partition of	552/CT_HAS_PARTITION
has port	is port of	770/CT_HAS_PORT
has product/service charac- teristic	is product/service charac- teristic of	340/CT_HAS_PERF_CHARAC
has reference enumeration	is reference enumeration of	653/CT_HAS_REFERENCE_EN UMERATION
has reference to	has reference to	294/CT_HAS_REF_TO
has reference value	is reference value of	581/CT_HAS_REFERENCE_VA LUE
has relation with	has relation with	504/CT_IS_IN_RELSHP_TO_1
has relation with	has relation with	111/CT_IS_IN_RELSHP_TO
has relationship to	has relationship to	194/CT_HAS_REL_WITH
has slot	is slot of	530/CT_HAS_SLOT
has state	is state of	75/CT_HAS_STATE
has stereotype	is stereotype of	576/CT_HAS_STEREOTYPE

Active name	Passive name	Type no./API name
has strong influence on	is strongly influenced by	484/CT_HAS_STRONG_INFL
has submachine	is submachine of	538/CT_HAS_SUBMACH
has subordinate event	is subordinate event of	46/CT_HAS_SUBO_EV
has subordinate rule	is subordinate rule of	45/CT_HAS_SUBO_RULE
has tag definition	is tag definition of	577/CT_HAS_TAG_DEF
has tagged value	is tagged value of	578/CT_HAS_TAG_VAL
has template parameter	is template parameter of	527/CT_HAS_TMPL_PARA
has top state	is top state of	540/CT_HAS_TOPSTATE
has transition to	has transition from	198/CT_HAS_TRANS_TO
has transition to	has transition from	459/CT_HAS_TANSITION
has type	is type of	508/CT_IS_TYPE_OF
has value	is value of	373/CT_IS_VALUE
has value	is value of	533/CT_HAS_VALUE
has very strong influence on	is very strongly influenced by	485/CT_HAS_FULL_INFL
has very weak influence on	is very weakly influenced by	505/CT_HAS_VERY_WEAK_INFL
has weak influence on	is weakly influenced by	482/CT_HAS_WEAK_INFL
implements	is implemented by	625/CT_IMPLEMENTES
implements	is implemented by	56/CT_REAL
implements	is implemented by	788/CT_IMPLEMENTES_MULTIPLE
imports	is imported	490/CT_IMPORT
include	is included	488/CT_INCLUDE
influences	is influenced by	843/CT_INFLUENCES_1
influences	is influenced by	380/CT_HAS_RESULT
influences	is influenced by	880/CT_ARCHIMATE_INFLUENCES
influences	is influenced by	571/CT_INFLUENCES
inhabits	is inhabited by	746/CT_INHABITS
instantiate	is instantiated by	445/CT_IS_INSTANCIATE
interacts with	has interaction from	750/CT_INTERACTS_WITH_2

Active name	Passive name	Type no./API name
interacts with	has interaction from	460/CT_INTERACTS_WITH
invokes	is invoked by	761/CT_INVOKES
is	is	414/CT_IS
is a	is a	283/CT_IS_A
is a functional generic term of	is a functional subterm of	406/CT_FUNC_HEADLINE
is allowed	is allowed	719/CT_IS_ALLOWED
is alternative operating resource of	has alternative operating resource	278/CT_IS_ALT_PROD_FAC_OF
is approved by	approves	222/CT_IS_GRANT_BY
is assigned 1:1	is assigned 1:1	101/CT_IS_1_1_ASSIG
is assigned 1:n	is assigned n:1	42/CT_IS_1_N_ASSIG
is assigned n:m	is assigned m:n	51/CT_IS_N_M_ASSIG
is assigned to	is assigned to	93/CT_IS_ASSIG_5
is assigned to	has assignment	669/CT_ARCHIMATE_IS_ASSIGNED_TO
is assigned to	is assigned to	52/CT_IS_ASSIG_3
is assigned to	has assigned	252/CT_IS_ASSIG_6
is assigned to	is assigned to	17/CT_IS_ASSIG_1
is associated with	is associated with	700/CT_BPMN_IS_ASSOCIATED
is associated with	is associated with	662/CT_ARCHIMATE_ASSOCIATION
is associated with	is associated with	837/CT_IS_ASSOCIATED_WITH
is attribute type group	has attribute type group	270/CT_IS_ATTR_TYPE_GRP
is authority required by	requires authority from	868/CT_DMN_AUTHORITY_REQ
is basis for	has basis	520/CT_BASIS_FOR
is carried out at	is location for carrying out	258/CT_IS_EXEC_AT
is carried out at	is controlled by	628/CT_IS_PERFORMED_AT
is checked by	checks	223/CT_IS_CHKD_BY
is compared to	is compared to	322/CT_IS_CMP_TO

Active name	Passive name	Type no./API name
is composed by	composes	409/CT_IS_COMPOSED
is composed of	is part of	667/CT_ARCHIMATE_IS_COMPOSED_OF
is composed of	is a component of	7/CT_IS_CRT_BY
is compounded with	is foreign key of	613/CT_SAP_BW_COMPOUNDING
is condition for	has as condition	743/CT_IS_CONDITION_FOR
is connected to	is connected to	624/CT_HAS_LINK_WITH
is connected to	is connected to	175/CT_IS_CNN_TO_2
is connected to	is connected to	18/CT_IS_CNN_TO_1
is consumed	consumes	274/CT_IS_CONS_BY
is consumed by	consumes	443/CT_IS_USED_BY_1
is created with help from	helps with the creation of	464/CT_HELPS_TO_SET_WITH
is data target/info provider in	contains as data target/info provider	619/CT_BW_DATA_TARGET_IN_INFO_AREA
is decision maker	has decision maker	887/CT_DMN_IS_DECISION_MAKER
is decision owner	has decision owner	886/CT_DMN_IS_DECISION_OWNER
is defined	can be processed by/with	305/CT_IS_DEF_1
is defined	can be processed by/with	327/CT_IS_DEF_2
is defined by	defines	265/CT_IS_DEF_BY_2
is defined by	defines	246/CT_IS_DEF_BY_1
is demanded by	demands	519/CT_DEMANDED_BY
is dependent on	is precondition for	733/CT_DEPENDS_ON
is deputy process manager	is as process under representative responsibility of	506/CT_IS_SUBST_PRCRS_RS PN
is described by	is describing for	396/CT_IS_DSCR
is described by	describes	671/CT_SAP_NW_IS_DESCRIBED_BY
is describing for	is described by	78/CT_IS_DESC_FOR_1
is different from	is different from	359/CT_IS_DIFF

Active name	Passive name	Type no./API name
is disciplinary superior to	has the disciplinary superior	9/CT_IS_DISC_SUPER
is discriminator of	is discriminated by	190/CT_IS_DISC_OF
is divided into	divides	370/CT_IS_STRCR_IN
is documented in	documents	450/CT_IS_DOCU_IN
is driven by	drives	769/CT_IS_DRIVEN_BY
is employee variable	has employee variable	320/CT_IS_EMPL_INST
is escalated to	is escalation for	744/CT_IS_ESCALATED_TO
is evaluated by	evaluates	331/CT_IS_EVAL_BY_2
is evaluated by	evaluates	48/CT_IS_EVAL_BY_1
is execution-oriented superior	is execution-oriented subordinate	40/CT_IS_EXEC_ORNT_SUPER
is exposed to	is associated with	361/CT_IS_EXPOS_TO
is feature of	has feature	285/CT_IS_FEAT_OF
is filter of	is filtered by	300/CT_IS_FLTR_OF
is foreign key for	has foreign key	79/CT_IS_FRGN_KEY_FOR_1
is formulated based on	is source of	777/CT_IS_FORMULATED_BASED_ON
is generalization of	is specialization of	479/CT_GENERAL_2
is generic term of	is subterm of	403/CT_IS_GENERIC_TERM
is implemented by	implements	366/CT_IS_IMPL_BY
is implemented by	implements	244/CT_IS_REAL_BY
is in conflict with	is in conflict with	481/CT_CONFLICTS
is in state	has been put in state	543/CT_IS_IN_STATE
is influenced by	has influence on	487/CT_HAS_INFL
is info source in	contains as info source	618/CT_BW_INFOSOURCE_IN_APPL_COMP
is information required by	requires information from	866/CT_DMN_INFO_REQ
is initiated by	initiates	805/CT_IS_INITIATED_BY
is input decision of	has as input decision	872/CT_DMN_IS_INPUT_DECISION_OF
is input event for	has as input event	884/CT_IOT_INPUT_EVT

Active name	Passive name	Type no./API name

leads to	is assigned to	116/CT_LEADS_TO_1
leads to	is dependent on	334/CT_LEADS_TO_4
leads to	is dependent on	117/CT_LEADS_TO_2
lies on	has information about	86/CT_LIES_ON
links	is linked by	54/CT_LNK_2
links	is linked by	315/CT_LNK_3
links	is linked by	676/CT_ARCHIMATE_LINKS
links	is linked by	332/CT_LNK_4
links	is linked to	47/CT_LNK_1
links port type	is linked with port type	609/CT_BPEL_LINKS_PTYPE
manages data of	data are managed by	708/CT_MANAGES_DATA_OF
may access	can be accessed by	351/CT_MUST_NOT_ACS
may carry out	may be carried out by	401/CT_CAN_EXEC
may change privileges	may change privileges (passive)	474/CT_MAY_CHG_PRIVIL
may instantiate	can be instantiated by	350/CT_IS_ALLOW_TO_ASSIGN_INST
may not carry out	may not be carried out by	402/CT_CANNOT_EXEC
may search	may search (passive)	473/CT_MAY_SEARCH
meets	applies to	758/CT_MEETS
message flow	incoming message flow	689/CT_BPMN_MESSAGE_FLOW
motivates	is motivated by	760/CT_MOTIVATES

Active name	Passive name	Type no./API name
must be informed about	result is forwarded to	326/CT_MUST_BE_INFO_AB_T_2
must be informed about	result is forwarded to	266/CT_MUST_BE_INFO_AB_T_1
must be informed on cancella-tion	sends information on can-cellation to	352/CT_MUST_BE_INFO_ON_CNC_2
must be informed on cancella-tion	sends information on can-cellation to	316/CT_MUST_BE_INFO_ON_CNC_1
must inform about result of	result is forwarded by	255/CT_MUST_INFO_AB_T_RE_S
must inform about result of	result is forwarded by	325/CT_MUST_INFO_AB_T_RE_S_OF
must not occur for	has condition (false)	128/CT_MUST_NOT_OCC_WH_N
must occur for	has condition (true)	127/CT_MUST_OCC_FOR
no longer uses	is no longer used by	756/CT_NO_LONGER_USES
occupies	is occupied by	210/CT_OCCUPIES
occurs at	has	507/CT_OCCUR
occurs before	occurs after	584/CT_SAP_XI_OCCURS_BEFORE
occurs before	occurs after	717/CT_MOD_TRANSFORM_OCCURS_BEFORE
occurs before	occurs after	477/CT_SUCCEED
originates from	is origin of	532/CT_ORIG
owns	is part of	95/CT_OWNS
owns	is owned by	836/CT_OWNS_3
participates in	has conversation link to	762/CT_PARTICIPATES_IN
performs	is performed by	598/CT_BPEL_PERFORMS
performs	is performed by	480/CT_EXEC_5
performs	is performed by	698/CT_BPMN_PERFORMS
performs on entry	is performed on entry	546/CT_PERF_ENTRY
performs on exit	is performed on exit	547/CT_PERF_EXIT
performs while in state	is performed while in state	548/CT_PERF_STATE

Active name	Passive name	Type no./API name
permits access	access is permitted by	536/CT_PERM_ACCESS
produces	is produced by	442/CT_PRODUCES
propagates	is propagated by	191/CT_PROPG_1
propagates	is propagated	264/CT_PROPG_2
provides	is provided by	399/CT_PROVIDES
provides	is provided by	575/CT_DELIVERS_1
provides input for	receives input from	582/CT_PROV_INP_FOR_1
provides input for	receives input from	53/CT_PROV_INP_FOR
provides value for	uses value of	319/CT_PROV_VAL_FOR
pushes	is pushed from	738/CT_VSM_PUSH
raises	is raised by	542/CT_RAISES
reads	is read by	247/CT_READ_1
reads	reads	248/CT_READ_2
realizes	is realized by	458/CT_REALIZES
realizes	is realized by	712/CT_SOA_REALIZES
realizes	is realized by	664/CT_ARCHIMATE_REALIZES
receives signal	sends signal	541/CT_RECEIVES
references	is referenced by	422/CT_REF
references	is referenced by	818/CT_REFERENCES
refers to	is referred to by	728/CT_REFS_TO_2
refers to	is referred to by	732/CT_REFS_TO_3
refines	is refined by	511/CT_REFINES
relates to	has	177/CT_REL_TO
relates to	relates to (passive)	476/CT_RELATES_TO
removes	is removed by	768/CT_REMOVES
repeats	is repeated by	438/CT_REPEATS
replaces	is replaced by	773/CT_REPLACES
represents	is represented in	371/CT_REPR
requires	is required by	279/CT_REQU
requires	is required by	362/CT_REQ

Active name	Passive name	Type no./API name
requires alternatively	is required alternatively	280/CT_REQU_ALT
resides in	contains	554/CT_RESIDES
runs on	is platform for	787/CT_RUNS_ON_MULTIPLE
runs on	is platform for	503/CT_RUNS_ON
satisfies	is satisfied by	521/CT_SUPPLY
secures	is secured by	496/CT_SECURE
sends	receives	205/CT_SENDS
sends	is sent from	407/CT_SENDS_2
sends message	receives message	556/CT_SENDS_MESSAGE
sends signal	has been sent	545/CT_SENDS_SIG
serves	is served by	881/CT_ARCHIMATE_SERVES
shipment to	shipment from	737/CT_VSM_SHIPMENT
specifies	is specified by	842/CT_SPECIFIES
splits to	is split by	410/CT_SPLITS
stores	is stored on	126/CT_STOR
substitutes	is substituted by	774/CT_SUBSTITUTES
substitutes for	is substituted by	318/CT_SUBST
supplies properties for	has properties supplied by	457/CT_SUPPL_PROP
supports	is supported	417/CT_SUPPORTS
supports	is supported by using	146/CT_SUPP_2
supports	is supported by	221/CT_CAN_SUPP_1
supports	is supported by	147/CT_SUPP_3
supports	is supported by using	145/CT_SUPP_1
supports	is supported by	840/CT_SUPPORTS_1
supports when time limit is exceeded	supports when time limit is exceeded (passive)	475/CT_SUPP_TIME_LIMIT_EXCEED
Synonym (preferred term of)	Synonym (not a preferred term of)	405/CT_SYNONYM
to	from	600/CT_BPEL_TO
transmits data to	receives data from	502/CT_SENDS_3

<b>Active name</b>	<b>Passive name</b>	<b>Type no./API name</b>
triggers	is triggered by	677/CT_ARCHIMATE_TRIGGERS
uses	is used by	663/CT_ARCHIMATE_IS_USED_BY
uses	is used by	397/CT_USES
uses	is used	478/CT_USES_2
uses	is used by	137/CT_USE_3
uses	is used by	60/CT_USE_1
uses	is used by	820/CT_USES_SD
uses	is used by	360/CT_USE_5
uses	is used by	124/CT_USE_2
uses for authorization	is used for authorization	617/CT_BW_USES_FOR_CHECK
weakens	is weakened by	782/CT_WEAKENS

### 3.10 Object symbols (SymbolNum)

Symbol name	Symbol number	Object type no./API name

### 3.11 Attribute number, length and data type (AttrTypeNum)

Attribute type name	Type no.	Attribute type length/API name	Data type
Aborts	3533	10/AT_ABS_ABORTS	Integer domain
Absolute change in MAC	830	7/AT_CHANG_ABS_MAK	Floating point number
Abstract type	2173	1000/AT_BMPN_ABSTRACT_TYPE	One-liner
Accumulated amount of damage reduction	3962	20/AT_ACCUMULATED_AMOUNT_OF_DAMAGE_REDUCTION_RISK	Floating point number
Accumulated amount of damage reduction	3967	20/AT_ACCUMULATED_AMOUNT_OF_DAMAGE_REDUCTION_CTRL	Floating point number
Accumulated amount of damages	3960	20/AT_ACCUMULATED_AMOUNT_OF DAMAGES	Floating point number
Accumulated amount of failed damage reduction	3968	20/AT_ACCUMULATED_AMOUNT_OF_MISSED_DAMAGE_REDUCTION	Floating point number
Accumulated amount of prevented damages	3961	20/AT_ACCUMULATED_AMOUNT_OF_PREVENTED_DAMAGE_S_RISK	Floating point number
Accumulated amount of prevented damages	3965	20/AT_ACCUMULATED_AMOUNT_OF_PREVENTED_DAMAGE_S_CTRL	Floating point number
Accumulated amount of unprevented damages	3966	20/AT_ACCUMULATED_AMOUNT_OF_NOT_PREVENTED DAMAGES	Floating point number
Accumulated idle time	3561	30/AT_ABS_ACCUMULATED_IDLE_TIME	Duration
Accumulated interruption time during orientation	1302	8/AT_SUM_INTRR_TME_ORIENTATION	Duration
Accumulated interruption time during processing	1303	8/AT_SUM_INTRR_TME_PRC	Duration
Accumulated overtime	3562	30/AT_ABS_ACCUMULATED_OVERTIME	Duration

<b>Attribute type name</b>	<b>Type no.</b>	<b>Attribute type length/API name</b>	<b>Data type</b>
Accumulated scheduled time	3560	30/AT_ABS_ACCUMULATED_SCHEDULE_TIME	Duration
Accuracy description text (information requirement)	2704	10000000/AT_IR_ACC_DESCR_TX	Multi-line text
Achievement of objectives	1378	20/AT_TRG_ACHIEV	Value
Acknowledgement	2198	64/AT_SAP_XI_ACKNOWLEDGEMENT	Value
Acknowledgement type	2197	64/AT_SAP_XI_ACKNOWLEDGEMENT_TYPE	Value
Action	1197	100/AT_ACTION	Multi-line text
Action (FALSE)	104	200/AT_ACT_FALSE	Multi-line text
Action (TRUE)	103	200/AT_ACT_TRUE	Multi-line text
Action type	3588	20/AT_ACTION_TYPE	Value
Action when time limit exceeded	1276	1024/AT_ACT_TIME_EXCEEDED	Multi-line text
Activate data store object data automatically	2610	2/AT_SAP_BW_ODS_AUTO_ACTIVATED	Boolean
Activation condition	4412	1000/AT_ACTIVATION_CONDITION	Multi-line text
Activations	1122	5/AT_ACTIV	Integer
Active review pattern	3801	100/AT_ACTIVE_REVIEW_PATTERN	One-liner

## 4 Disclaimer

ARIS products are intended and developed for use by persons. Automated processes, such as the generation of content and the import of objects/artifacts via interfaces, can lead to an outsized amount of data, and their execution may exceed processing capacities and physical limits. For example, processing capacities are exceeded if models and diagrams transcend the size of the modeling area or an extremely high number of processing operations is started simultaneously. Physical limits may be exceeded if the memory available is not sufficient for the execution of operations or the storage of data.

Proper operation of ARIS products requires the availability of a reliable and fast network connection. Networks with insufficient response time will reduce system performance and may cause timeouts.

If ARIS products are used in a virtual environment, sufficient resources must be available there in order to avoid the risk of overbooking.

The system was tested using scenarios that included 100,000 groups (folders), 100,000 users, and 1,000,000 modeling artifacts. It supports a modeling area of 25 square meters.

If projects or repositories are larger than the maximum size allowed, a powerful functionality is available to break them down into smaller, more manageable parts.

Some restrictions may apply when working with process administration, ARIS Administration, ARIS document storage, and ARIS Process Board, and when generating executable processes. Process Governance has been tested and approved for 1000 parallel process instances. However, the number may vary depending on process complexity, for example, if custom reports are integrated.

ARIS document storage was tested with 40.000 documents. We recommend monitoring the number and overall size of stored documents and archiving some documents if needed.
