3	For ARIS Publisher Server you need a dedicated machine. ARIS Publisher Server cannot be installed on a machine that running ARIS Connect / Design Server. Please follow instructions in Installation guideline.

Unless otherwise specified in our documentation, we encourage installing the latest service packs, patch bundles and fixes for the supported operating systems and products if those are recommended by the respective vendor. Please report defects resulting from fixes, patches, or service packs supplied by 3rd parties to the vendor directly.

Software AG tests its software against specific versions of operating systems and supported products (RDBMSs, JDKs, browsers, application servers, directory servers) and not specifically against all possible combinations of patches, fixes, and hardware that may include that platform. Therefore, Software AG might not use the exact same versions of fixes, patches, or service packs for operating systems and supported software products when troubleshooting a customer issue.

Hardware Scenarios Design & Connect Server (Minimum required HW)

Scenario	# Conc. Users	Remark	Single Server	Distributed (1)
Demo	1	"Laptop"-SingleUser Installation (only Demo scenario)	8GB (>=6GB free RAM)	
S	1-50	Small server installation	8GB (>=6GB free RAM) 6 CPU Cores >= 50GB free HD Space	
M	50-200	Medium server installation (Oracle or MS SQL recommended)	16GB 12 CPU Cores >= 50GB free HD Space	2x S Server
L	200-400	Large server installation (only with Oracle or MS SQL)	32GB 24 CPU Cores >= 100GB free HD Space	2x M Server
XL (Custom)	400-800	Extra Large server installation (only with Oracle or MS SQL)		2x L Server or 4x M Server

Please contact ARIS Support for L, XL or larger scenarios.

Software AG recommends to monitor utilization (of RAM & CPU Cores) in productive environment. Due to the number of users / databases, complexity of databases and other influencing factors, hardware recommendation could be higher.

(1) Not: Fail safe

Hardware Scenarios Client (Installed ARIS Architect)

Scenario	# users	Minimum	Recommended	Bandwidth
without local database system	1	2GB >= 2GB free HD Space	4GB >= 2GB free HD Space	100 Mbit/s Lower bandwidths can result in reduced performance.
with local database system	1	8GB >= 20GB free HD Space (plus sufficient disk space for user databases)	>8GB >= 20GB free HD Space (plus sufficient disk space for user databases)	

Hardware Scenarios Publisher Server

Scenario	# Conc. Users	Processor	(free) RAM	Controller & Hard disk
Demo (S)	1 - 5	1 x Dual Intel® Xeon® 5.X or more current	2 GB	
M	5 - 100	2 x Dual Intel® Xeon® 5.X or more current (only with Oracle or MS SQL)	12 GB	SAS/SATA with RAID 0 option Rapid RAID array 15.000 rpm
L	100 - 250	2 x Intel® Xeon® 5.X 6c or more recent (only with Oracle or MS SQL)	32 GB	SAS/SATA with RAID 0 option Rapid RAID array 15.000 rpm
XL	250 - 750	2 x Intel® Xeon® 5.X 6c or more recent (only with Oracle or MS SQL)	64 GB	SAS/SATA with RAID 0 option Rapid RAID array 15.000 rpm

If you are about to use all ARIS server types in your system, ARIS Connect Server, ARIS Design Server, ARIS Publisher Server and ARIS Risk & Compliance Manager Server must be installed on different machines. You can only install one server on one machine.

Virtual Machine Support

Software AG provides for all its software the definitions of supported, documented platform configurations (referred to here just as 'supported platform') which will include specific Operating System (OS) and hardware configurations, and may include Java Virtual Machine (JVM) and database versions. Customers can use a commercially available virtualization environment for a Software AG production environment if it accurately and completely emulates one of the supported platforms.

Customers who use virtual environments are required to comply fully with their contractual terms and conditions for licensing.

Software AG tests its software for operation on the supported platforms and not specifically against all possible combinations of hardware that might be comprised that operating system (for example, file system, disk controllers, memory configuration, display devices and so on). Therefore, the correct expertise, provision and management of a hardware configuration to support the platform remain the responsibility of our customers, whether directly using physical hardware or a virtualization environment.

Software AG tests and supports certain products on the specific virtualized environments listed in the system requirements section of the product documentation. Customers can use a different virtualized environment that accurately and completely emulates one of the supported platforms; however, if they encounter an issue that Software AG judges might be caused by the virtualized environment, then the customer is responsible for reproducing the issue on an actual supported platform before further analysis can take place. Software AG Global Support will refer customers to the Global Consulting Services group for guidance or recommendation about the use of virtualization software, or, if required, the best approaches for copying a system to a supported platform.
