1 About this Documentation

- Document Conventions 2
- Online Information and Support 2
- Data Protection 3

Document Conventions

| Convention | Description |
|----------------|--|
| Bold | Identifies elements on a screen. |
| Monospace font | Identifies service names and locations in the format <i>folder.subfolder.service</i> , APIs, Java classes, methods, properties. |
| <i>Italic</i> | Identifies: Variables for which you must supply values specific to your own situation or environment. New terms the first time they occur in the text. References to other documentation sources. |
| Monospace font | Identifies: Text you must type in. Messages displayed by the system. Program code. |
| { } | Indicates a set of choices from which you must choose one. Type only the information inside the curly braces. Do not type the { } symbols. |
| | Separates two mutually exclusive choices in a syntax line. Type one of these choices. Do not type the symbol. |
| [] | Indicates one or more options. Type only the information inside the square brackets. Do not type the [] symbols. |
| ... | Indicates that you can type multiple options of the same type. Type only the information. Do not type the ellipsis (...). |

Online Information and Support

Product Documentation

You can find the product documentation on our documentation website at <https://documentation.softwareag.com>.

Product Training

You can find helpful product training material on our Learning Portal at <https://learn.software-ag.com>.

Tech Community

You can collaborate with Software GmbH experts on our Tech Community website at <https://tech-community.softwareag.com>. From here you can, for example:

- Browse through our vast knowledge base.
- Ask questions and find answers in our discussion forums.
- Get the latest Software GmbH news and announcements.
- Explore our communities.
- Go to our public GitHub and Docker repositories at <https://github.com/softwareag> and <https://hub.docker.com/publishers/softwareag> and discover additional Software GmbH resources.

Product Support

Support for Software GmbH products is provided to licensed customers via our Empower Portal at <https://empower.softwareag.com>. Many services on this portal require that you have an account. If you do not yet have one, you can request it at <https://empower.softwareag.com/register>. Once you have an account, you can, for example:

- Download products, updates and fixes.
- Search the Knowledge Center for technical information and tips.
- Subscribe to early warnings and critical alerts.
- Open and update support incidents.
- Add product feature requests.

Data Protection

Software AG products provide functionality with respect to processing of personal data according to the EU General Data Protection Regulation (GDPR). Where applicable, appropriate steps are documented in the respective administration documentation.

2 Adabas System Coordinator Online Services

This document describes the Adabas System Coordinator Online Services application (SYSCOR).

The following topics are provided:

Using Adabas System Coordinator Online Services

System Settings

Maintenance

Current Activity Displays

Special Services

3 Using Adabas System Coordinator Online Services

- Online Services Main Menu 8
- Navigation 10
- Using PF Keys 10
- Help Information 16

This section describes the Adabas System Coordinator Online Services application SYSCOR.

Online Services Main Menu

➤ To invoke Adabas System Coordinator Online Services

- log on to SYSCOR and enter the command MENU.

During logon to SYSCOR, the application will determine its current run mode. Run mode can be any of the following:

| Run Mode | Description |
|----------------------------|--|
| Coordinator not installed | The Adabas link module does not contain the Coordinator stub. Local session information will not be available but all other functions will work. |
| Local (node 0) | The TP system in use is running in local (non-daemon) mode. By default, session information will be obtained locally. |
| Daemon (node <i>nmn</i>) | The TP system in use is running with an Adabas System Coordinator daemon. The daemon Node ID is displayed. By default, session information will be obtained from the daemon. Dynamic transaction routing (DTR) is possible for clustered applications in TP systems defined to run in daemon mode. |
| Pulsing (node <i>nmn</i>) | The TP system in use has been configured to send session activity statistics to the daemon Node ID displayed. By default, session information will be obtained from the daemon and can be viewed from any other TP system by setting the perspective to the daemon Node ID displayed. DTR is not possible for TP systems defined to run in pulsing mode. |
| Startup | The Adabas link module contains the Coordinator stub, however the database containing the Coordinator configuration file is not yet available. The Coordinator periodically retries access to the configuration file until it becomes available. |

The run mode will be displayed on an Environment Information screen at logon. This screen also shows information about the current Adabas System Coordinator daemon, if one is used. It is displayed before the main menu appears.

The Main Menu screen will then appear:

```

17:31:56      ***** A D A B A S   SYSTEM COORDINATOR 8.3.1 *****      2016-12-03
              - Main Menu -                                           C1MAINM1
Run-mode: Pulsing (node 2650)

              Code      Service
              ----      -
              0        System Settings
              1        Maintenance
              2        Current Activity Displays
              3        Special Services
              4        About System Coordinator
              .        Exit
              ----      -

Code..: _

You can easily switch around the tools for Fastpath, Vista etc by use of
PF11, or use the codes COR, AFP, AVI, AAF, ATM as commands - anytime.

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit                                     Prods Vers

```

The following options are available:

| Option | Description |
|---|---|
| System Settings | Maintain configuration file setting. |
| Maintenance | Define and maintain definitions and parameters. |
| Current Activity Displays | Display information about the current session and other sessions in this TP system or, when using a daemon, other sessions anywhere in the entire enterprise. |
| Special Services | Provide installation and applied fix information for the Adabas System Coordinator components, and define timeout settings. |
| About Adabas System Coordinator | Display product information. |

Note: From the Adabas System Coordinator main menu, you may switch to the online systems of Adabas Fastpath, Adabas Vista, Adabas SAF Security or Adabas Transaction Manager by pressing PF11. PF11 cycles in the sequence System Coordinator to Transaction Manager to Fastpath to Vista to SAF Security. You may also switch from any screen with a command line by entering the appropriate three-character code (for example, AVI for Adabas Vista) as a command. Cycling through the products using PF11 or switching directly using the product code will route you to the highest available version or the highest available Demo version (if the product is not installed).

Navigation

You can access screens in two ways:

- sequentially by selecting a menu service and entering it in the Code field; or
- directly by typing a numerical command on the command line.

For example, entering the command 1.1 on the command line directly accesses the Client Runtime Controls screen within the Maintenance function without first accessing the Maintenance menu.

| Function | Object | Command |
|---------------------------|---|---------|
| System Settings | Menu | 0 |
| | LFILE 152 Maintenance | 0.1 |
| Maintenance | Menu | 1 |
| | Client Runtime Controls | 1.1 |
| | Daemon Groups | 1.2 |
| Current Activity Displays | Menu | 2 |
| | Display Adabas Client Jobs | 2.1 |
| | Network Discovery | 2.2 |
| | Display Daemons in a Daemon Group | 2.3 |
| Special Services | Menu | 3 |
| | Verify System Coordinator Client Installation | 3.1 |
| | Verify System Coordinator Server Installation | 3.2 |
| | Display Applied Fixes (Zaps) | 3.3 |

Using PF Keys

SYSCOR uses PF keys for various actions. Key functions are standard throughout the system, wherever possible. The PF keys that apply to each screen are indicated at the bottom of the screen.

The following keys apply throughout the system:

| PF Key | Function | Description |
|--------|----------|--|
| PF1 | Help | invoke the help specific to the current screen |
| PF3 | Exit | quit and return to the previous screen |

The following keys apply generally, depending on the type of action or function in use:

| PF Key | Function | Description |
|--------|----------|---|
| PF4 | Refr | from active screens, refresh the data |
| PF5 | Upd. | from general maintenance screens, commit the update |
| PF7 | Back | from list screens, return to the previous page |
| PF8 | Next | from list screens, move to the next page |
| PF10 | Add | from general maintenance screens, add an object |
| PF12 | Menu | return immediately to the main menu |

Help Information

➤ To invoke Adabas System Coordinator help information

- Press PF1.

The help screen that appears applies to the current screen and may comprise several pages. From each help screen, you can access lower level options or return to previous, higher levels.

You can navigate by entering:

| | |
|-------|---|
| - | to move backwards and up a menu level |
| 1 - 8 | to move down a level to the function selected |

If the help screen comprises multiple pages, you can enter:

| | |
|---|---|
| + | to move to the next page |
| - | to move to a previous page until page 1, then back up a level |

4 System Settings

- System Settings Menu 14
- Configuration File (LFILE 152) Maintenance 15
- SAF Security Settings 16

This function is used to maintain Adabas System Coordinator system settings.

System Settings Menu

> To display the System Settings menu

- Select service 0 from the main menu.

```
17:06:12      ***** A D A B A S  SYSTEM COORDINATOR 8.3.1 *****      2016-04-13
              - System Settings -                                     C10000M1
Run-mode: Local (node 0)

              Code      Service
              ----      -
              1          LFILE 152 Maintenance
              2          SAF Security Settings
              .          Exit
              ----      -

Code..: _

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit                                     Menu
```

Select option 1 to view or modify the current configuration file.

Select option 2 to view or modify the SAF Security settings for SYSCOR when using this configuration file.

Configuration File (LFILE 152) Maintenance

> To customize the use of LFILE 152

- 1 Select service 1 from System Settings menu or enter the command 0.1 on a command line.

```

|                                                    |
+-----+-----+-----+-----+-----+-----+-----+-----+
Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help           Exit                                     Menu

```

- 2 The LFILE 152 Maintenance window appears.
- 3 In the Original LFILE field, the database and file number are displayed for the configuration file that was allocated to LFILE 152 at the start of your current SYSCOR session.

The LFILE 152 Maintenance window is displayed whenever an online services function is selected that accesses the configuration file, making it possible for the user to access multiple configuration files from within a single Natural session.

- 4 These values were allocated to LFILE 152 using the static Natural parameter `NTLFILE ID=152, . .` or the dynamic Natural parameter `LFILE=(152, . .)`. For more information about specifying LFILE 152, see the installation instructions relevant to your operating system.
- 5 In the Current LFILE field, you can change the database and file number to access a different configuration file. Specify the new configuration file database and file number, if necessary.
- 6 Review the default settings.

-
- Specify the name of the System Coordinator group that contains the daemon configured for Adabas SAF Security. The group and daemon must already be defined (see the Adabas System Coordinator documentation section Maintain Daemon Groups).
 - Select the desired behavior when no daemon is available or the security service in the daemon is not available:
 - Disallow all functions:

SYSCOR cannot be used until the daemon security service is available.
 - Allow read functions only:

SYSCOR activity displays can be used, but functions that require update access, such as server restart, are not allowed.
 - Allow all functions:

SYSCOR can be used without restriction.
- 4 You must restrict who has update access to COR.SETTINGS. Anyone with update access can deactivate SAF security checking, or switch to a configuration file with no SAF security settings.
 - 5 In an emergency (for example, wrong security definitions or the daemon is unexpectedly unavailable and you selected “Disallow all functions”), you can sign on to Natural as user DBA and set “Protect SYSCOR with SAF Security” to N until the emergency has passed. Security checking of SAF Security Settings is bypassed for user DBA. Obviously you should restrict access to user DBA.

5 Maintenance

- Maintenance Menu 20
- Maintain Client Runtime Controls 21
- Maintain Daemon Groups 42

This service is used to define and maintain the parameters and definitions that are required by Adabas System Coordinator.

Maintenance Menu

➤ To display the Maintenance menu

- Select service 1 from the main menu.

Note: The Current LFILE 152 Settings window may appear before the Maintenance menu. See the section [System Settings](#) for more information.

| From this menu, you can | Service | Cmd |
|--|---------|-----|
| maintain client runtime controls | 1 | 1.1 |
| maintain daemon group parameter values | 2 | 1.2 |

Maintain Client Runtime Controls

This function is used to define/maintain runtime controls for jobs that use Adabas System Coordinator services and any of the client-based products that depend on Adabas System Coordinator: Adabas Fastpath, Adabas Transaction Manager and Adabas Vista.

Runtime controls determine the operational behavior of these products in a given job. You can adjust this behavior on a case-by-case basis by specifying overrides to tailor operation for a particular transaction code (TP systems), stepname (batch jobs) or login id. You can also define a special type of API runtime control, for completely dynamic reconfiguration.

Note: See section Parameters for a complete description of all runtime controls.

Note: Runtime controls are shared between all installed optional products, and can be defined by any of the administration applications (SYSCOR, SYSAVI, SYSAFP, SYSATM). You can administer the runtime controls of any product from any application.

- [List Runtime Controls](#)
- [Add a Runtime Control](#)
- [Maintain Runtime Controls](#)

List Runtime Controls

➤ To display a list of existing definitions

- 1 Select service 1 from the Maintenance menu or enter the command 1 . 1 on the command line.

```

18:08:21      ***** A D A B A S   SYSTEM COORDINATOR 8.3.1 *****      2016-12-03
              - Client Runtime Controls (COR) -                          U11300M1
Run-mode: Pulsing (node 2650)                               Reposition to Type: _____
                                                         Name: _____

              Client Controls
C Type      Name      AFP  AVI  ATM  COR      Comments
_ CICS (DTR)  CICCLUST  Y    Y    Y    Y        Overrides,Info
_ Batch      CORP****  Y    Y    Y    Y
_           *DEFAULT  Y    Y    Y    Y
_           CORQ0100  Y    Y          Y
_           CORQ0200  Off  Y    Y    Y
_ COM-LETE   DAEFCODE  Y    Y    Y    Y
_ TSO       *DEFAULT  Y    Y    Y    Y

Mark with Jobs,Modify,Purge,Rename,Copy,Overrides,Information,History
End of List
Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit  Refr                               Add  Prods Menu
    
```

- 2 The list shows the service or job type, the name and for which products controls are defined. The Comments column shows whether overrides or site information are defined for this service/job.
- 3 The name identifies the service or job to which these controls apply. A service is a collection of jobs which form a single DTR cluster, for example CICSplex, CICS/MRO with Dynamic Transaction Routing, IMS TM or UTM. For jobs, the name may be a wildcard or you can specify a set of default controls for jobs of that type.
- 4 Taking the above example:
 - any batch job with a name beginning CORP will use the controls defined for CORP****.
 - job CORQ0100 will use its own controls (but it will use the Adabas Transaction Manager controls defined for *DEFAULT, because there are none defined for CORQ0100).
 - job CORQ0200 will use its own controls and Adabas Fastpath is disabled for this job.
 - any other batch job will use the controls defined for *DEFAULT.
- 5 If you wish to display or modify controls or overrides for one of the other products, press PF11 until the required product appears in the screen title and message line:

```

18:10:27      ***** A D A B A S   SYSTEM COORDINATOR 8.3.1 *****      2016-12-03

          _ API controlled - type 2

Entry is required
Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11---PF12---
      Help           Exit                                           Menu

```

2 Select a job type for the job from the list provided.

Each different job type has different characteristics and it is therefore important to select the correct type.

Note: Select the job type “CICS (Standard)” if CICS/MRO is to be used without dynamic transaction routing or for other CICS environments. Select the job type “CICS (DTR – Dynamic Transaction Routing)” if CICS/MRO is to be used with dynamic transaction routing.

If you mark the selection “more choices for type”, another selection window will appear with additional job types. If you need to use any of these, contact support for advice.

If you mark either of the API controlled types, you can define a set of runtime controls which can be activated dynamically by API. You must enable API overrides for any job where you want to use this API definition and name it in the job’s list of permissible APIs.

Note: Dynamically activated API runtime controls are not yet available.

3 After selecting a job type, press Enter. In the following example, the job type “CICS (DTR – Dynamic Transaction Routing)” was selected which results in the following screen being displayed:

```

18:17:29      ***** A D A B A S   SYSTEM COORDINATOR 8.3.1 *****      2016-12-03
              - Add Client Runtime Control -                               U11310M4
Run-mode: Pulsing (node 2650)

                Type: CICS (DTR)
                Name: _____

This is a complex type of runtime which is capable of running in basic mode
and in DTR mode.

You must define a System Coordinator group (and its daemons) with PRODUCT=DTR
AND the daemon(s) in that group must be executing in order to achieve DTR
capability, otherwise it is ignored.

The name specified above is a unique name for the runtime controls for the
DTR service (it is not a jobname). You must also use the 'Expand' line
command to enter the list of all jobs in the service.

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help           Exit           Add                               Menu

```

- 4 Enter the service name (which may not contain * wildcards, in this example CICSPROD was entered) and press PF5 to continue:

```

15:41:23 ***** A D A B A S   SYSTEM COORDINATOR 8.3.1 (I001) ***** 2016-08-29
              - System Coordinator Runtime Controls -                               U11310M5
Run-mode: Pulsing (node 2660)
Type: CICS (DTR)   Name: CICSPROD
  Operation: Normal autodetect: X Enable without products: _ Disable all: _
  API runtime overrides.....: N (Y/N)   Threadsafe operation...: Y (Y/N)
  Use additional exits.....: N (Y/N)
  Maximum idle time (sec)...: 3600_____ Non-terminal idle time.: _____
  Generate RSP009/79 (Y/N)..: Y (until 0_____ seconds elapse)
  Messages - Local.....: Console Y and/or DDMSG file _
                Or - Daemon routing: _

      Help      Exit                                     Menu
```

9 Enter the jobname and press PF5:

```
18:35:06      ***** A D A B A S   SYSTEM COORDINATOR 8.3.1 ***** 2016-12-03
          - Add Client Runtime Control -                               U11310M3
Run-mode: Pulsing (node 2650)

Type: Batch
Name: natbat__ (* for default controls for this type)

This is a standard type of runtime.

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit      Add                                     Menu
```

- 10 A job name may contain one or more asterisks (*) to indicate a wild card. For example, the runtime control with the name CICS**PR will be found by any job with the value "CICS" in positions 1-4 and the value "PR" in positions 7-8, no matter what the characters are in positions 5-6. If an asterisk (*) is the last character in a job name, the remainder of positions in the name through the eighth are padded with asterisks. A single asterisk indicates that is the default definition for this job type.
- 11 Controls are always matched on type. The order of search within type is:
1. Match on exact job name.
 2. Match on wild card definitions.
 3. Use the default for the job type, if one has been defined.
-  **Note:** The number of wild card job names defined for a job type has a direct effect on the number of Adabas commands needed to establish the runtime controls at initialization. This is particularly relevant to batch jobs that process relatively few Adabas commands.
- 12 Different control types have different settings and different default values. Make any required changes and press PF5 to add the definition. You can then define API overrides and additional options or return to the list, as described in 6.

```

10:52:32      ***** A D A B A S   SYSTEM COORDINATOR 8.3.1 *****      2016-03-13

Maintain Runtime Controls

➤ To maintain a job parameter

- Select it by entering one of the following options in column C on the Client Runtime Controls list:

| | |
|---|------------------|
| j | list jobs |
| m | modify |
| p | purge |
| r | rename |
| c | copy |
| o | overrides |
| i | site information |

Modify provides screens in which you can make modifications to the job parameters. See section Parameters for information on each parameter. For purge, rename, and copy, you are prompted to confirm the action to be taken.

- [Modify Runtime Control](#)
- [List jobs in Runtime Control](#)
- [Purge a Runtime Control](#)
- [Rename a Runtime Control](#)
- [Copy a Runtime Control](#)
- [Maintain Site Information](#)
- [Maintain Client Runtime Control Overrides](#)
- [Dynamic Client Runtime Configuration for Experts](#)

Modify Runtime Control

A client job's base client runtime controls are actioned during job initialization, and any override controls are then applied accordingly.

If a change to the base client runtime controls is subsequently made then the client job will need to be restarted to action the change.

If a change to an override runtime control is made then the Adabas System Coordinator will dynamically detect the change. There may be a delay between the change being made and the session actioning these changes. Please refer to [Dynamic Client Runtime Configuration for Experts](#) for more information.

➤ To modify a runtime control:

- 1 Select it from the list by marking column C with an "m".

```

16:03:05      ***** A D A B A S   SYSTEM COORDINATOR 8.3.1 *****      2016-03-12

Type: CICS (DTR)   Name: CICCLUST

Select the override type ....: _ Login id
(mark one)                      x Transaction

and specify the override name: natp_____

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit      Add                      Menu
    
```

- 4 Press PF5 to add an empty override, which you can then modify as required:

```

18:47:13      ***** A D A B A S   SYSTEM COORDINATOR 8.3.1 *****      2016-12-03
              - Client Runtime Controls Override Summary (COR) -      U11380M1
Run-mode: Pulsing (node 2650)                      Reposition to Type: _____
Type: CICS (DTR)   Name: CICCLUST                      Name: _____

                          Overrides
C Type      Name      AFP  AVI  ATM  COR      Comments
_ Transaction NATP
-           N426           Y      Y

```

Mark with Modify,Purge,Rename,Copy,Information

Command ==>

```

Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit  Refr                      Add  Prods Menu

```

- 5 Enter one of the following options in the C column to select an entry:

| | |
|---|------------------|
| m | modify |
| p | purge |
| r | rename |
| c | copy |
| i | site information |

- 6 These options are the same as the ones available for maintaining client runtime controls except that they maintain the override controls rather than the base level controls.
- 7 Use PF11 to select the product for which you want to define or modify an override.

Dynamic Client Runtime Configuration for Experts

There are several ways to dynamically modify the client runtime controls for one or more sessions:

- [CORENV](#)
- [Dynamic Overrides](#)
- [ADABAS Client Session Task: Controls](#)

Notes:

1. By using the PF11 method of selecting different products, this means of modifying runtime controls also applies to other products as well as Adabas System Coordinator.
2. Some dynamic changes may take some time to take effect depending upon the product/control in question.

CORENV

In order to make a dynamic change to the client runtime controls that will only affect the current session, enter CORENV and use PF11 to select the required product as in the following example.

```

18:49:59      ***** A D A B A S   SYSTEM COORDINATOR 8.3.1 *****      2016-12-03
              - Main Menu -                                           C1MAINM1
Run-mode: Pulsing (node 2650)

          Code      Service
          ----      -
          0          System Settings
          1          Maintenance
          2          Current Activity Displays
          3          Special Services
          4          About System Coordinator
          .          Exit
          ----      -

Code...: _

You can easily switch around the tools for Fastpath, Vista etc by use of
PF11, or use the codes COR, AFP, AVI, AAF, ATM as commands - anytime.

Command ==> corenv

Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit                                     Prods Vers
    
```

The current Adabas System Coordinator runtime controls in effect for your session are displayed:

```

16:09:27          ***** CURRENT SESSION CONTROLS *****          2016-03-12
                  - System Coordinator Session Controls -          CORENVM1

API runtime overrides....: N              Threadsafe operation...: Y

      to disk.....: N
Activity pulse every....: 100          commands or 30          seconds
Group name.....: WORKSHOP          Daemon connection messages (Y/N): N
Area.....: _____          System.....: _____
                                          Review.: N          Client Monitor.: N

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help          Exit          Upd          Reset          More          Prods

```

Use PF11 to select the required product and modify the controls as required.

Dynamic Overrides

In order to make a dynamic change to the client runtime controls that will affect all current sessions and all future sessions, either create or modify a client runtime control override. Please refer to [Maintain Client Runtime Control Overrides](#) for more information.

When a client runtime control override is created it will inherit the base client runtime controls for the job, but some fields are modifiable. Any modifications to a client runtime control override will be dynamically picked up, after a short time delay, by the Adabas System Coordinator.

ADABAS Client Session Task: Controls

Please refer to [Expand Adabas client sessions](#) for information on how to use the task “Controls” to modify the client runtime controls for a selected session.

Maintain Daemon Groups

This section describes how to add/maintain daemon groups.

Adabas System Coordinator daemon groups are used to manage clustered (multiregion or IBM Sysplex) applications.

The daemon group defines the types of applications to be managed and the node numbers of the daemons that will manage those applications. One daemon must be active on each operating system image that hosts the application. Any application job can then be defined to this group using the Client Runtime Controls function of SYSCOR, SYSAVI, SYSAFP, or SYSATM Online Services.

- [Main Menu](#)
- [Adding a Daemon Group Definition](#)
- [Maintaining a Daemon Group Definition](#)
- [Maintain a Daemon Group Member Definition](#)

Main Menu

➤ To invoke the daemon group maintenance menu

- 1 Select service 2 from the Maintenance menu or enter the command 1.2 on a command line.

```

09:25:46      ***** A D A B A S  SYSTEM COORDINATOR 8.3.1 ***** 2016-12-04
                                System Coordinator Groups          C11200M1
Run-mode: Pulsing (node 2650)

C Group Name   Type      SVC ID   Daemons
- DEM082      Multi    254      2
- TSTGROUP    Single   253      1

Mark with M(odify),P(urge),R(ename),L(ist)

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit  Refr              Add      Menu

```

- 2 Enter one of the following options in the C column:

| | |
|---|-------------------------|
| m | Modify group definition |
| p | Purge group definition |
| r | Rename group definition |
| l | List daemons in group |

- 3 Use PF10 to add a new group definition

Adding a Daemon Group Definition

➤ To add a new daemon group definition

- 1 Press PF10 on the System Coordinator Group menu. The following screen will appear:

```
09:27:38                Add                2016-12-04
                System Coordinator Group    C11210M1

                Group Name: _____    SVC ID: _____

System Type: _ Standard single-system image...
(Mark one)   There is only one daemon in the group.
              _ Standard multi-system images - XCF...
              This enables multiple XCF group daemons.
              _ Standard multi-system images - Net-Work...
              This enables multiple Net-Work group daemons.

Group-wide latency service:
Full crash recovery disk file (Y/N): N

Command ==>
PF1 Help      PF3 Exit      PF5 Add      PF9 More
```

- 2 In the field *Group Name*, enter the name for the group. Refer to daemon group parameter *Daemon Group Name* for more information.
- 3 In the field *SVC ID*, define the router (SVC) number that is used for communicating with the daemon group. Refer to daemon group parameter *Daemon SVC* for the more information.
- 4 In the fields *System Type*, specify the type of system the daemon group is to coordinate. Refer to daemon group parameter *System Type* for the more information.
- 5 In the field *Full crash recovery disk file*, select whether at rest session-related information should be recoverable after a daemon failure. Refer to daemon group parameter *Full Crash Recovery Disk File* for the more information.
- 6 Press PF5 to add the group definition.
- 7 Press PF9 to see more Daemon Group definition fields and the following screen will appear:

```
16:04:19      Additional Group Parameters      2016-03-08
              System Coordinator Groups      C11210M2

Messages - daemon..... Console: Y and/or DDMSG file: _
Messages - databases... Console: Y and/or DDMSG file: _

Command ==>
              PF3 Quit      PF5 Upd
```

- 8 For information relating to “Messages – daemon” and “Messages – databases” refer to the corresponding daemon group parameters *Messages – daemon* and *Messages – databases*.
- 9 The settings from the “More” screen can be confirmed by using PF10. The daemon group will not be created until PF5 is pressed on the first screen.
- 10 Press PF5 to confirm any changes made on this screen, or PF3 to return to the main group screen.

Maintaining a Daemon Group Definition

After adding the group, you can change any of its attributes, by entering ‘m’ against it:

```
+-----+
| 10:55:35          Modify          2016-12-04
|          System Coordinator Group  C11230M1
|
|          Group Name: DEM082      SVC ID: 254__
|
| System Type: _ Standard single-system image...
| (Mark one)   There is only one daemon in the group.
|              X Standard multi-system images - XCF...
|                This enables multiple XCF group daemons.
|              _ Standard multi-system images - Net-Work...
|                This enables multiple Net-Work group daemons.
|
| Group wide latency service:
|   Full crash recovery disk file (Y/N): N
|
| Command ==>
|   PF1 Help      PF3 Exit      PF5 Upd      PF9 More
+-----+
```

Make any changes required and press PF5 to confirm them. Press PF9 to see further parameters:

```
+-----+
| 16:10:00          Additional Group Parameters      2016-03-08
|          System Coordinator Groups  C11210M2
|
| Messages - daemon..... Console: Y and/or DDMSG file: _
| Messages - databases... Console: Y and/or DDMSG file: _
|
| Command ==>
|          PF3 Quit      PF5 Upd
+-----+
```

Make any changes required then enter PF5 to confirm these changes or PF3 to return to the first screen.

```

+-----+
| 16:10:00      Additional Group Parameters      2016-03-08
|               System Coordinator Groups      C11210M2
|
| Messages - daemon..... Console: Y and/or DDMSG file: _
| Messages - databases... Console: Y and/or DDMSG file: _
|
|
| Command ==>
|               PF3 Quit      PF5 Upd
+-----+

```

You can also purge or rename the group. You must use purge and rename with care as you may invalidate other definitions (client runtime controls and Adabas Fastpath buffer definitions) that refer to the group being purged or renamed.

To purge, enter “p” against the group to be purged:

```

+-----+
| 11:25:01      Purge      2016-09-01
|               System Coordinator Group      C11240M1
|
|               Group Name: TESTMULT
|
|               SVC ID: 253
|
|               PF5 to Confirm Purge
|
| Command ==>
|               PF1 Help      PF3 Exit      PF5 Purge
+-----+

```

and press PF5 to confirm.

To rename, enter ‘r’ against the group to be renamed:

```

+-----+-----+-----+
| 11:25:31      Rename      2016-09-01 |
|      System Coordinator Group C11250M1 |
|                                     |
|      Group Name: TESTMULT          |
|                                     |
|      New Name: _____          |
|                                     |
|      PF5 to Confirm Rename          |
|                                     |
|      Command ==>                  |
|      PF1 Help      PF3 Exit      PF5 Upd |
+-----+-----+-----+

```

Maintain a Daemon Group Member Definition

➤ To maintain a daemon group member definition

- 1 On the System Coordinator Daemon Group menu, enter "1" in the C column adjacent to an entry in the Group Name column. The following screen will appear:

```

10:59:37      ***** A D A B A S      SYSTEM COORDINATOR 8.3.1 *****      2016-12-04
              - Daemon Parameters (COR) -      C11260M1
Run-mode: Pulsing (node 2650)
Group Name: WORKSHOP      Operating System: Multi ←
SVC ID: 254
      Daemon
      C      Job Name      Node ID
      -      ICFDCOR5      2650_      <== Top of List
      -      ICFDCOR6      2660_      <== End of List
      _____
      _____
      _____
      _____
      _____
      _____
      _____
      _____
      _____
      _____
Mark with M(odify),P(urge)
Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit Refr Upd      Add Prods Menu

```

- 2 From this screen, you can

- Use PF11 to select the product whose daemon group member parameters you wish to maintain.
 - Purge a daemon group member by entering “p” in the C column adjacent to the Daemon Job Name entry;
 - change the daemon group member job name or node id by overtyping it and pressing PF5;
 - add a new daemon group member entry by pressing either PF5 or PF10; or
 - modify a daemon group member entry by entering m in the C column adjacent to the entry to be modified.
- 3 If you are adding a new daemon group, you must add at least one daemon group member.
- For each daemon group member, specify the following:
- Daemon Job Name: The name of the job or started task that will run the Adabas System Coordinator daemon group member (SYSCO).
 - Node ID: The Adabas Node ID (target) used to identify the daemon group member to the network.
-  **Note:** You may not define Node ID 255, because 255 is reserved for use by Natural.
- 4 Entering m against a daemon group member presents the product specific parameter modification screen.

Maintaining Adabas System Coordinator daemon parameters:

```
16:48:45 ***** A D A B A S   SYSTEM COORDINATOR 8.3.1 (I008) ***** 2016-07-22
          - Adabas System Coordinator Daemon Parameters -           C11261M1
Run-mode: Pulsing (node 17004)
Group: WORKSHOP   Daemon: ICFDCOR5   SVC: 254   Node: 2650   System: Multi
Recovery
  Continuous Operation (Y/N).....: N
Daemon latency/pulse services

  CORDUMP for transient situations.: N   Number of outputs: 0_____

Command ==>

Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit      Upd      Menu
```

Please refer to Daemon Group Member Parameters for information on the available parameters.

Maintaining Adabas Transaction Manager daemon parameters:

For more information refer to the *How to maintain TM controls* section in *Adabas Transaction Manager Online Services* documentation.

6 Current Activity Displays

| | |
|--|----|
| ▪ Current Activity Displays Menu | 52 |
| ▪ Change Perspective | 53 |
| ▪ Adabas Client Activities | 55 |
| ▪ Display Session Information | 61 |
| ▪ Expand Adabas client sessions | 64 |
| ▪ Network Discovery | 70 |
| ▪ Display Daemon information | 75 |

The Current Activity Displays function can be used to obtain information and statistics on all applications being managed by the Adabas System Coordinator.

Current Activity Displays Menu

➤ To display the Current Activity Displays menu

- Select service 2 from the main menu.

```

11:24:13      ***** A D A B A S  SYSTEM COORDINATOR 8.3.1 *****      2016-03-06
              - Current Activity Displays -                               C12000M1
Run-mode: Pulsing (node 2650)                               Perspective: Daemon (node 2650)

              Code      Service
              ----      -
              0      Change Perspective
              1      Adabas Client Activities
              2      Network Discovery
              3      Daemon Information
              .      Exit
              ----      -
Code...: _

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help           Exit                                           Menu
    
```

| From this menu, you can | Service | Cmd |
|--|---------|-----|
| change perspective | 0 | |
| Adabas client activities | 1 | 2.1 |
| network discovery | 3 | 2.2 |
| display daemon information | 4 | 2.3 |

All information requests will be directed to the current information source as displayed in the Perspective field at the top of the screen. By default this will be either your local client session when you are running in Local (non-daemon) mode or if you are running in pulsing or full daemon mode, monitoring requests will be directed to your coordinator daemon. Option 3 is only available

if you are currently using daemon perspective, as in the example screen above. Bear in mind that the information displayed in pulsing mode may not be as current as the same information displayed in local mode. In pulsing mode, you see a snapshot of the information as it was last transmitted to the daemon. The frequency of transmission depends on the client runtime “Refresh activity statistics” controls.

Change Perspective

This option can be used to route monitoring requests to any active coordinator daemon or to your local client session (see screen below).

➤ To access the Change Perspective screen from the Current Activity Displays menu

- Select service 0.

```

11:12:59      Change Perspective      2016-05-22
Current perspective: Daemon (node 650)  C12PSPM1

Local: Shows current activity displays information for this
       job and active targets of the Adabas router
       in use by this job
Daemon: Shows current activity displays information for jobs
        managed by the System Coordinator daemon and
        active targets known to the daemon

Revert to local (node 0).....: _
Change to daemon node.....: _____

                PF3 Exit      PF5 Set perspective

```

Change perspective by marking “Revert to local” or entering a daemon node and pressing PF5. For jobs defined to run in daemon mode other options are available:

```
+-----+
| 11:17:04      Change Perspective      2016-05-22
| Current perspective: Daemon (node 660)  C12PSPM1
|
| Local: Shows current activity displays information for this
|        job and active targets of the Adabas router
|        in use by this job
| Daemon: Shows current activity displays information for jobs
|        managed by the System Coordinator daemon and
|        active targets known to the daemon
|
| Revert to daemon (node 650)....: _
| Change to daemon node.....: _____
| Change to local (node 0).....: _
|
|           PF3 Exit    PF5 Set perspective
+-----+
```

Mark “Revert to daemon...” and press PF5 to revert to the job’s default daemon (after changing perspective to another daemon) or mark “Change to local...” and press PF5 to switch to local perspective.

When running in pulsing mode, the options are slightly different, with “Revert to Pulsing...” instead of “Revert to daemon...”:

```
+-----+
| 11:21:57      Change Perspective      2016-12-04
| Current perspective: Daemon (node 2660)  C12PSPM1
|
| Local: Shows current activity displays for this
|        job and active targets of the Adabas router
|        in use by this job
| Daemon: Shows current activity displays for jobs
|        managed by the System Coordinator daemon and
|        active targets known to the daemon
|
| Revert to Pulsing (node 2650)....: _
| Change to daemon node.....: _____
| Change to local (node 0).....: _
|
|           PF3 Exit    PF5 Set perspective
+-----+
```

Adabas Client Activities

- List jobs managed by Adabas System Coordinator
- List Adabas clients known by System Coordinator daemon

➤ To display the Adabas Client Activities screen from the Current Activity Displays menu

- Select service 1 or enter the command 2.1 on a command line.

You can now choose between listing activities for Adabas clients in a single job, or across all jobs.

```

11:24:13      ***** A D A B A S   SYSTEM COORDINATOR 8.3.1 *****      2016-03-06
              - Current Activity Displays -                          C12100M0

```

This screen shows the TP monitors and other tasks that are currently active and managed by Adabas System Coordinator. Local perspective shows the job that you are executing in, daemon perspective shows all jobs managed by that daemon. The following fields are displayed:

| Field | Description |
|--------------------|--|
| C | This field can be used to display additional information: <ul style="list-style-type: none"> ■ D: display job information ■ T: perform tasks on the job ■ J: list the jobs which comprise a clustered application service ■ Any other non-blank character lists session information. |
| Service | The service name for a clustered application. |
| Job Name/Job Num | The job name and job number. |
| Number of commands | The number of Adabas commands issued by the job. |
| Current Sessions | The number of user sessions active in the job. |
| Area/System | The site-dependent settings for this job. |

Display Job Information

Selecting Display results in the following screen being displayed:

```

17:19:24 ***** A D A B A S   SYSTEM COORDINATOR 8.3.1 (I001) ***** 2016-08-29
                - System Coordinator Job Statistics -                U1J0S0M1

Job Name: DA2FCI23

      No. of commands:                        34,703
      Thread peak information:
        Session size:                        80K
        Workarea size:                       76K
        Total:                               199K
      Consolidated thread information
        Current number of threads            3
        Maximum number of threads           12
        Current memory usage (all threads)  158K
        Maximum memory usage (all threads)  1,174K
      Area:
      System:

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
                Exit  Refr                                Expan Prods Menu

```

This screen displays:

- the total number of Adabas commands seen by System Coordinator in this job
- peak thread size information for session-related memory, temporary workarea and total thread size
- current and maximum number of threads and memory usage across threads
- the site-dependent area/system settings for the job.

Pressing PF10 lists the job's sessions (see [Display Session Information](#)).

Tasks

This function gives a task selection window. Mark the selected task and press `Enter` to perform the task:

```

17:10:03 ***** A D A B A S   SYSTEM COORDINATOR 8.3.1 (I001) ***** 2016-08-29

```

This screen shows the login ids (across all jobs) that are currently active and managed by Adabas System Coordinator. It is only available in daemon perspective. The following fields are displayed:

| Field | Description |
|--------------------|---|
| C | Enter any non-blank character to list session information for this login id (see Display Session Information.) |
| Login id | The login id. Use the selection field to reposition the list at the specified login id. Enter *MY to reposition the display at your own logon identity (taken from the current *INIT-USER). This allows you to quickly get to display activities for your current session. |
| Number of sessions | The number of active sessions for this login id, across all jobs. |
| Number of jobs | The number of jobs in which this login id is active. |
| Number of commands | The number of Adabas commands issued by the login id. |

Display Session Information

Expanding a job or login id results in the following screen being displayed:

```

17:23:36 ***** A D A B A S SYSTEM COORDINATOR 8.3.1 (I001) ***** 2016-08-29
- Display Session Information - C12130M1
Run-mode: Pulsing (node 2660) Perspective: Daemon (node 2660)
Service: None Job: DA2FCI23 C34504 ID: CI23 Commands: 34,711
Sessions: 3 Session size: 80K Work size: 76K Total: 199K
C Session id Login id Number
*_____ of commands Area System Status ←
- TCM9 DA2FCI23 TEAM1 198 running in Adabas
- TCN0 DA2FCI23 TEAM2 4,972 at rest

Help Exit Refr JobID Menu

```

This screen shows summary information about the job (when expanding a job) and the client sessions that are active for a job or login id managed by the Adabas System Coordinator. The following information is provided:

| Field | Description |
|------------|---|
| Session ID | <p>The Session ID. In a TP system, a session is usually equivalent to a terminal or an asynchronous task (also known as background tasks). IDs comprised of special characters are normally generated by the system.</p> <p>Use the selection field to reposition the display.</p> <p>In local perspective:</p> <p>Show only the terminal identity specified. Enter *MY to reposition the display at your own terminal identity (taken from the current *INIT-ID). This allows you to quickly get to display activities for your current session.</p> <p>In daemon perspective:</p> |

Select the required task and press `Enter` to perform it.

- Snap

Output will be written to `CORDUMP`. This task should normally only be used under guidance from Customer support.

Note: A Snap request issued in daemon perspective will only be actioned following activity by the selected client and then only if the client's job is using daemon latency (refer to Latency Controls for information on job latency options).

- Switch debug on/off

Activate or deactivate client debug monitoring for a session.

- Purge

Purge this session. Be careful not to purge a session that is still in use as this may have unpredictable results. You must confirm the purge request with `PF5`:

```

+-----+
| 16:01:32      Purge Session      2016-10-09      |
|                                           C12233M1      |
|                                           |
|           Session ID: UKSJU  4      |
|                                           |
|           PF5 to Confirm Purge      |
|                                           |
| WARNING:                                     |
| Purging a session can cause catastrophic    |
| unpredictable results including failure of  |
| the whole service. You must be absolutely  |
| sure the session is gone completely and is  |
| not going to reactivate.                   |
|                                           |
| Command ==>                                |
|           PF1 Help      PF3 Exit      PF5 Purge      |
+-----+

```

- Any other non-blank character to expand Adabas client sessions, see the next section.

```

12:00:15          ***** CURRENT SESSION CONTROLS *****          2016-12-04

```

Otherwise you are presented with a screen that will indicate where to find the runtime controls that are currently being used by the session.

To display or modify controls for another product, press PF11 until the required product appears (refer to the appropriate product’s documentation for descriptions regarding their client runtime controls).

You can then modify the controls (those which are modifiable on runtime control overrides – see [Maintain Client Runtime Control Overrides](#)) for this client session only and press PF5 to update them. Press PF6 to revert to the pre-defined runtime controls for all products.

Controls may only be modified if “Latency – Local = Y” and “Perspective: Local” are used.

- Trace: display the unified trace for this Adabas session:

Trace information can only be displayed when using:

- “Perspective: Local”, or
- “Perspective: Daemon” and the runtime controls of the job whose session is being viewed has “Latency – Daemon = Y”.

```

Each Adabas System Coordinator daemon maintains a list of targets that are or were at one time active. This information is communicated to all daemons in the cluster.

When the perspective is daemon, this screen displays the network from that daemon's perspective.

You can perform tasks against some node types by marking them with a "T" and a window will indicate the operations available.

Note: Some tasks are only selectable when the appropriate product is installed. For example, tasks beginning with "TM:" are only available with Adabas Transaction Manager.

For Coordinator daemon nodes in the network:

```

17:36:02          Node Operations          2016-10-25
Current target: 2650  Type: System Coord

Select one task:
_ Set your perspective to this daemon
_ Trace Control
_ Trace activation control (ON/OFF): ____
_ Trace display
_ TM: ET data management
_ TM: Set TM distribution transaction timeout
_ TM: Stop inactive users (STOPI), dormant for _____ seconds

PF3 - Exit   Enter - Perform task
    
```

Mark the required task and press Enter.

| Field | Description |
|---|---|
| Set your perspective to this daemon | Display the network from the perspective of this daemon. |
| Trace Control | Display/Modify unified trace settings. For more information refer to Using the Unified Trace. |
| Trace activation control | Turn the daemon trace on or off. |
| Trace display | Display the daemon trace content. |
| TM: ET data management | For more information refer to the <i>ET Data Management</i> section in <i>Adabas Transaction Manager Online Services</i> documentation. |
| TM: Set TM distribution transaction timeout | For more information refer to the <i>How to dynamically change the TM distributed transaction timeout</i> section in <i>Adabas Transaction Manager Online Services</i> documentation. |
| TM: Stop inactive users (STOPI) | For more information refer to the <i>How to stop inactive Adabas sessions</i> section in <i>Adabas Transaction Manager Online Services</i> documentation. |

For Adabas nodes in the network:

- 3 Local perspective shows the targets active on the Adabas router that your client session is connected to:

```

11:58:10 ***** A D A B A S SYSTEM COORDINATOR 8.3.1 (I003) ***** 2016-05-22

Display Daemon information

➤ To display the daemon information screen from the **Session Monitoring** menu

- Select service 3 or enter the command 2.3 on a command line.

```

12:07:01 ***** A D A B A S   SYSTEM COORDINATOR 8.3.1 (I001) ***** 2016-09-01
                - Daemon Information -                               C12300M1
Run-mode: Local plus (node 1660)                                Perspective: Daemon (node 1660)
                Start Time                                         <----Cluster Moves-->
Coordinator Name  Node  System  (HH:MM.SS)  Sessions      Total  Ave. Size
ICFDCOR4         1660  DA2F   12:19.47    0              0      0

End of List
Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit  Refr                               Menu
    
```

The screen shows information about the daemon being used as perspective. This option is only available when using daemon perspective, because node information is kept in the daemon, not in the local client.

The following information is provided:

| Field | Description |
|------------------|---|
| Coordinator Name | The name of the coordinator daemon task. |
| Node | The Adabas Node ID of the coordinator daemon. |
| System | The operating system ID. |
| Start Time | The start time of the coordinator daemon. |
| Sessions | The number of client sessions currently managed by this coordinator daemon. |
| Cluster Moves | The number of client sessions that have been routed dynamically to this system, and the average session message size per move. This field is only relevant for clustered applications in a multisystem environment. |

7 Special Services

| | |
|--|----|
| ▪ Special Services Menu | 78 |
| ▪ Runtime Information | 79 |
| ▪ Verify Adabas System Coordinator Client Installation | 80 |
| ▪ Verify Adabas System Coordinator Daemon Installation | 80 |
| ▪ Fix Display | 80 |

Special Services Menu

> **To display the Special Services menu**

- Select service 3 from the main menu.

The following menu will appear:

```

13:15:28      ***** A D A B A S   SYSTEM COORDINATOR 8.3.1 *****      2016-04-14
                - Special Services -                                     C13000M1
Run-mode: Local plus (node 1660)

                Code      Service
                ----      -
                0      Runtime Information
                1      Verify System Coordinator Client
                2      Verify System Coordinator Daemon
                3      Fix Display
                .      Exit
                ----      -

Code..: _

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit                                     Menu
    
```

| From this menu, you can | Service | Cmd |
|--|---------|-----|
| display runtime information | 0 | n/a |
| verify Adabas System Coordinator client installation | 1 | 3.1 |
| verify Adabas System Coordinator daemon installation | 2 | 3.2 |
| access the fix display | 3 | 3.3 |

Runtime Information

> To display runtime information

- Select option 0 from Special Services menu.

```

13:16:55      ***** A D A B A S   SYSTEM COORDINATOR 8.3.1 *****      2016-04-14
                - Runtime Information -                                C13002M1
Run-mode: Local plus (node 1660)

Job Name   : DA2FCI23   Job Number  : C43489   Job Type: CICS
Group Name : n/a       Service Name: n/a

Configuration File      Database      File      Router
  Primary:             640        190        254
  Alternate:

Response code.....: 0           Subcode: 0
Retry setting.....: 1000        Current: 0
SF148.....: Continue

Critical Products:
Active Products  :   ATM   AFP   AVI

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit  Refr                                Menu

```

The screen shows:

- Information about the current job and whether it is running in daemon mode.
- The primary and alternate configuration files in use. If the configuration file has not yet been accessed successfully and SF148 is set to "Continue", PF11 is named Retry and can be used to force another attempt to access the configuration file (for example, after the database has been started).
- Which products are defined as critical for this client job.
- Which products are currently active in this client job.

Verify Adabas System Coordinator Client Installation

This function can be used to verify the successful installation of an Adabas System Coordinator client.

Verify Adabas System Coordinator Daemon Installation

This function can be used to verify the successful installation of an Adabas System Coordinator daemon.

Fix Display

➤ To display the applied fixes

- Select option 3 from Special Services menu.

```
08:36:03      ***** A D A B A S   SYSTEM COORDINATOR 8.3.1 *****      2016-04-23
              - Fix Display: COR 8.3.1 Patch: 0000 02/21/09 -      U1FIX0M1
              Local client job running this current session

C Patch Reference Type Description
_ 0000 MI821001 EXE For example only

Mark with any character for detail

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
              Exit Other                                Prods Menu
```

Initially the screen will list all fixes applied to the Adabas System Coordinator kernel in the local client environment.

You can select other display perspectives (e.g. Coordinator daemon or Adabas database) by using PF4. You can also directly list the applied fixes for Adabas Fastpath, Adabas Vista, and Adabas Transaction Manager by using PF11 to first select the appropriate product.
