

SYSDDM Utility

The SYSDDM utility is used to create, maintain and delete Natural data definition modules (DDMs).

The *SYSDDM Utility* documentation is organized in the following parts:

- Principles of Operation
- Invoking and Terminating SYSDDM
- Using SYSDDM Maintenance and Service Functions
- Listing DDMs
- Creating DDMs
- Invoking and Terminating the DDM Editor
- Using the DDM Editor Screen
- Cataloging a DDM
- Maintaining DDMs in Different Environments
