

ADASBV - Adabas Security by Setting

This Natural profile parameter can be used to prevent invalid results for accesses to Adabas files that are protected by "security-by-setting". When a file that is protected by "security-by-setting" is accessed, invalid results may be returned in some cases where no format buffer is generated and passed to Adabas.

| | | |
|-------------------------------------|-----|---|
| Possible settings | ON | Natural session data is passed. It is recommended that you set ADASBV=ON if you access "security-by-setting"-protected Adabas files. A format buffer is then always passed to Adabas for a database access (even if this is a 2-byte dummy buffer), thus avoiding invalid results. |
| | OFF | No Natural session data is passed. |
| Default setting | OFF | |
| Dynamic specification | yes | |
| Specification within session | no | |
