MAINPR - Override Default Output Report Number

This Natural profile parameter can be used to separate program output from Natural system output, which may be useful particularly in batch mode.

Possible settings	`0 - 31`	Valid printer number.
Default setting	`0`	
Dynamic specification	yes	
Specification within session	no	
Application Programming Interface	`USR6002N`	See *SYSEXT - Natural Application Programming Interfaces* in the *Utilities* documentation.

This applies to program output for Report 0, as produced by `DISPLAY`, `PRINT`, `WRITE` or `INPUT` statements (except `INPUT` statements which contain non-protected input fields (field attribute specification `AD=A`) or modifiable input fields (`AD=M`)).

If the `MAINPR` parameter is specified, program output for Report 0, which would normally be output on the printer assigned to Report 0, is output on the printer specified with `MAINPR` instead; while system output (`NEXT` prompt, `DATA` prompt, etc.) is always output on the primary output device (Report 0); the `MAINPR` setting must be a valid printer number (0 - 31).

A logical printer corresponding to the report number specified must be defined to Natural. A printer is defined with the profile parameter `PRINT`, with the macro `NTPRINT` or automatically by JCL (in batch mode or under TSO).

The `MAINPR` parameter does not apply to output from system programs in the Natural system library `SYSLIB`, which is always output on the primary output device (Report 0).
