## **PROGRAM - Non-Natural Program Receiving Control after Termination**

This Natural profile parameter specifies a non-Natural back-end program which is to receive control after the termination of the Natural session.

Possible settings	1-8 characters	Non-Natural back-end program.
	numeric value	Setting a numeric value, for example PROGRAM=0, indicates "no back-end processing". This is particularly relevant when Natural is invoked by a front-end program, because a default may be taken if PROGRAM is blank or not specified; see <i>Front-End Invoked via XCTL</i> in the <i>TP Monitor Interfaces</i> documentation.
Default setting	none	
Dynamic specification	yes	It can also be set dynamically from within a Natural program by calling the Natural subprogram CMPGMSET which is provided in the library SYSEXTP.
Specification within session	yes	
Application Programming Interface	USR4001N (available on mainframes)	See SYSEXT - Natural Application Programming Interfaces in the Utilities documentation.
	USR6204N (available on all platforms)	

Data for the program specified with the PROGRAM parameter can be supplied with the TERMINATE statement.

For the conventions of calling non-Natural back-end programs, see *Back-End Program Calling Conventions* in the *Operations* documentation.

## **CICS-Specific Information:**

In addition to back-end programs, the Natural CICS interface also supports back-end transactions which may be specified via RET=XXXX or RTI=XXXX or STR=XXXX instead of a program name, with XXXX being a valid CICS transaction ID.

- RET=XXXX or RTI=XXXX indicates that control has to be passed to CICS together with a return transaction ID by a CICS RETURN TRANSID ('XXXX') command.
- RTI=XXXX indicates that control has to be passed to CICS with a return transaction ID by a CICS RETURN TRANSID ('XXXX' IMMEDIATE) command.

• STR=XXXX indicates that a new transaction has to be started by a CICS START TRANSID ('XXXX') TERMID (\*INIT-ID), before relinquishing control via a CICS RETURN command.
