RM - Retransmit Modified Fields

This Natural profile parameter controls the retransmission of modified fields.

Some TP monitors translate input data automatically to upper-case characters. As Natural's screen optimization only retransmits modified data back to the screen, the TP-monitor translation may cause input for a field which has been modified not to be retransmitted.

Possible settings	ON	Natural always sends back all modified fields.
	OFF	Natural sends back modified fields only if they have been changed.
Default setting	OFF	
Dynamic specification	yes	
Specification within session	no
