NATPAGE Utility - Screen Capturing

The utility NATPAGE is used to capture screen output data (maps and reports) during a Natural session. The term screen in this context means the contents of the page buffer; that is, the logical page output by Natural.

The screen captures are stored in the Natural scratch-pad file as described in the relevant section in the *Operations* documentation.

The maximum number of screens that can be captured is determined by the session parameter PD, which is described in the *Parameter Reference* documentation.

The NATPAGE utility consists of the following Natural terminal commands:

Command	Function
%P	Activates NATPAGE and captures the contents of the current screen and all subsequent screens. Screens captured previously are deleted.
%I	Activates NATPAGE and captures the contents of the current screen.
%O	Deactivates NATPAGE.
%S	Resumes NATPAGE.
%E	Displays the screens captured with NATPAGE.

See the *Terminal Commands* documentation for a detailed description of these terminal commands.
