

Static SQL with Natural Security

Static generation can be disallowed with Natural Security by:

- restricting access to the Natural system library SYSDB2,
- disallowing the module CMD,
- restricting access to the libraries that contain the relevant Natural objects,
- disallowing one of the commands CATALOG, or STOW for a library that contains relevant Natural objects.

If a library is defined in Natural Security and the DBID and FNR of this library are different from the default specifications, the static generation procedure automatically switches to the DBID and FNR specifications defined in Natural Security.
