# **NDB - Retrieval of System Tables**

#### **Important**:

Before you use the Retrieval of System Tables function, refer to LISTSQL and Explain Functions in the section Special Requirements for Natural Tools for DB2.

The DB2 system tables provide information on the contents of your DB2 system. The Retrieval of System Tables function enables you to:

- display information on DB2 objects without coding SQL queries;
- easily access related objects, such as indexes of a table.

The DB2 objects supported by the Retrieval of System Tables function are database, tablespace, table, index, column, plan, check constraints, statistic tables, package, and DBRM (database request module), as well as access rights to and relationships between these objects.

DB2 objects are presented in one of the following two ways:

- As selection lists, where all objects are of the same type, and where commands can be issued to display related objects.
- You can list databases, tables, plans, and packages by name. From the database listings, you can invoke listings of the tablespaces or tables of a database. From the table listing, you can invoke listings of the columns and indexes of a table. From the plan listing, you can invoke listings of the DBRMs of a plan, of the package list of a plan, of the tables and indexes used by a plan, and of the systems which are enabled or disabled for a plan. From the package listing, you can invoke listings of the tables and indexes used in a package and of the systems which are enabled or disabled for a package. From the database, table, plan, or package listings, you can also investigate who is authorized to access a DB2 object. In addition, the User Authorization menu enables you to list all existing access rights by user ID.
- As reports, which merely contain information on different types of DB2 objects, and where only browse commands can be issued.

Browsing of objects is performed with ISPF-like commands. The most important browse commands can also be issued via PF keys.

This section covers the following topics:

- Invoking the Retrieval of System Tables Function
- List Databases
- List Tablespaces
- List Plans
- Commands Allowed on Plans
- List Packages

- List Tables
- User Authorizations
- List Statistic Tables

# **Invoking the Retrieval of System Tables Function**

- To invoke the Retrieval of System Tables function
- Enter function code "R" on the Natural Tools for DB2 Main Menu.

The Retrieval of System Tables screen is displayed:

```

Command ===>
Enter-PF1---PF3---PF3---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
     Help Setup Exit
```

With PF2 (Setup) the maximum length of one column and the number of fixed characters when scrolling left may be specified. The default values for both parameters may be changed in the CONFIG subprogram in library SYSDB2.

When a column value is longer than the maximum length, it will be truncated and marked with a '>' (strings truncated at the right end) or a '<' (numbers truncated at the left end). Note, that for further commands on a line e.g. the line command 'I', only the visible value can be taken as input. This means that commands on lines will fail, when values for further processing are truncated.

```

The following functions are available:

Code	Description
D	Lists databases defined in the DB2 catalog.
K	Lists packages defined in the DB2 catalog.
Р	Lists plans defined in the DB2 catalog.
S	Statistic tables.
Т	Lists tables defined in the DB2 catalog.
U	Provides information on which user(s) can access which DB2 objects.

The following parameters must be specified as selection criteria:

Parameter	Description
Database Name	The name of the database to be listed. Asterisk notation (*) for range specification is possible. The Database Name parameter is relevant to the List Databases function only.
Package Collection	The collection of the package to be listed. Asterisk notation (*) for range specification is possible. The Package Collection parameter is relevant to the List Packages function only.
Package Name	The name of the package to be listed. Asterisk notation (*) for range specification is possible. The Package Name parameter is relevant to the List Packages function only.
Plan Name	The name of the plan to be listed. Asterisk notation (*) for range specification is possible. The Plan Name parameter is relevant to the List Plans function only.
Table Creator	The name of the creator of the table(s) to be listed. Asterisk notation (*) for range specification is possible. The Table Creator parameter is relevant to the List Tables function only.
Table Name	The name of the table to be listed. Asterisk notation (*) for range specification is possible. The Table Name parameter is relevant to the List Tables function only.

# **List Databases**

### To invoke the List Databases function

- 1. Enter function code "D" on the Retrieval of System Tables screen.
- 2. Specify the name of the database(s) to be listed.

If a value followed by an asterisk is specified, all databases defined in the DB2 catalog whose names begin with this value are listed.

If asterisk notation is specified only, all databases defined in the DB2 catalog are listed.

#### **Commands Allowed on Databases**

The following line commands are available on the database listing screen. Line commands are entered in front of the desired database(s):

Command	Description
I	Displays information on a database.
S	Selects a database to be used with main commands (see below).
U	Unselects a database.
AU	Displays information on access rights to a database.
ТВ	Displays all tables defined in a database.
TS	Displays all tablespaces defined in a database.

The listings of tables or tablespaces displayed as a result of then "TB" or "TS" command can be used for further processing, whereas the contents of the screens displayed as a result of the "AU" or "I" command are for information purposes only.

A list of all line commands available with the List Database function can be invoked as a window by entering the help character "?" in front of any of the listed databases.

The commands "AU", "TB", and "TS" can also be used as main commands. Main commands are entered in the command line of the database list screen and apply to all databases previously selected with the "S" line command.

A further main command is the INFO command, which is the equivalent of the "I" line command, but displays information on all previously selected databases. Instead of being displayed, all information resulting from the "I" or INFO commands can also be marked for printing. Even if already displayed, information can be printed by issuing the PRINT command.

A list of all main commands available with the List Database function can be invoked as a window by entering "?" in the command line of the database list screen.

# **List Tablespaces**

The function to list tablespaces is not part of the Retrieval of System Tables main menu.

### To list tablespaces

• Issue the "TS" command on the database listing screen only.

A tablespace listing screen is displayed.

### **Commands Allowed on Tablespaces**

The following line commands are available on the tablespace listing screen. Line commands are entered in front of the desired tablespace(s):

Command	Description
I	Displays information on a tablespace.
S	Selects a tablespace to be used with main commands.
U	Unselects a tablespace.
PT	Displays all partitions of a tablespace.
TB	Displays all tables defined in a tablespace.

The listings of tables displayed as a result of the "TB" command can be used for further processing, whereas the listings resulting from the "I" and "PT" commands are for information purposes only.

A list of all line commands available on the tablespace listing screen can be invoked as a window by entering the help character "?" in front of any of the listed tablespaces.

The commands "PT" and "TB" can also be used as a main commands entered on the command line of the tablespace listing screen. Main commands apply to all tablespaces previously selected with the "S" line command.

A further main command is the INFO command, which is the equivalent of the "I" line command, but displays information on all previously selected tablespaces. Instead of being displayed, all information resulting from the "I" or INFO commands can also be marked for printing. Even if already displayed, information can be printed by issuing the PRINT command.

# **Commands Allowed on Plans**

The following line commands are available on the plan listing screen. Line commands are entered in front of the desired plan(s):

Command	Description
I	Displays information on a plan.
S	Selects a plan to be used with main commands.
U	Unselects a plan.
AU	Displays information on access rights to a plan.
DR	Displays all DBRMs contained in a plan.
IX	Displays all indexes used by a plan.
PK	Displays the package list of a plan.
SY	Displays the systems enabled or disabled for a plan.
TB	Displays tables used in a plan.

The listing displayed as a result of the "DR", "IX", "PK", or "TB" command can be used for further processing, whereas the contents of the screens displayed as a result of the "I", "AU", or "SY" command are for information purposes only.

A list of all line commands available with the List Plans function can be invoked as a window by entering the help character "?" in front of any of the listed plans.

The commands "AU", "DR", "IX", "PK", "SY", and "TB" can also be used as main commands, which are entered on the command line of the plan listing screen and apply to all plans previously selected with the "S" line command.

The INFO main command, which is the equivalent of the "I" line command, displays information on the DBRMs and their SQL statements contained in the plans previously selected. As with the List Database function, information resulting from the "I" or INFO commands can be printed, too.

#### **Indexes Used in Plan**

If you issue the "IX" command on either the plan listing screen or the table listing screen, a list of all indexes used in the selected plan(s) or table(s) is displayed.

#### **Commands Allowed on Indexes**

The following line commands are available on the index listing screen. Line commands are entered in front of the desired index(es):

Command	Description
I	Displays information on an index.
S	Selects an index to be used with main commands.
U	Unselects an index.
СО	Displays all columns of an index.
PT	Displays the partitions of an index.

The listings of columns displayed as a result of the "CO" or "PT" command cannot be used for further processing. Like the display resulting from the "I" command, they are for information purposes only.

A list of all line commands available on the index listing screen can be invoked as a window by entering the help character "?" in front of any of the listed indexes.

The commands "CO" and "PT" can be used as main commands, too, and entered in the command line of the index listing screen. If so, all columns of all indexes previously selected with the "S" line command are displayed.

A further main command is the INFO command, which is the equivalent of the "I" line command, but displays information on all previously selected indexes. Instead of being displayed, all information resulting from the "I" or INFO commands can also be marked for printing. Even if already displayed, information can be printed by issuing the PRINT command.

A list of all main commands available on the index listing screen can be invoked as a window by entering the help character "?" in the command line of the screen.

### Package List of Plan

If you issue the "PK" command on the plan listing screen, a list of all entries in the package list of the selected plan(s) is displayed.

#### **Commands Allowed on Package List Entries**

The following line commands are available on the package list screen. Line commands are entered in front of the desired package list entry:

Command	Description
I	Displays information on a package list entry.
S	Selects a package list entry to be used with main commands.
U	Unselects a package list entry.
PK	Displays all packages of a package list entry.

The listing of packages as a result of the "PK" command can be used for further processing, whereas the display resulting from the "I" command is for information purposes only.

A list of all line commands available with a package list can be invoked as a window by entering the help character "?" in front of any of the listed entries.

The command "PK" can also be used as main command, which is entered in the command line of the above screen and applies to all package list entries previously selected with the "S" line command.

# **List Packages**

To invoke the List Packages function, enter function code "K" on the Retrieval of System Tables screen. The collection and name of the package(s) to be listed can be specified. If a value followed by an asterisk is specified, all packages defined in the DB2 catalog whose collections/names begin with this value are listed. If asterisk notation is specified only, all packages defined in the DB2 catalog are listed.

### **List Tables**

#### To invoke the List Tables function

• Enter function code "T" on the Retrieval of System Tables screen.

The creator and name of the table(s) to be listed can be specified.

If a value followed by an asterisk is specified, all tables defined in the DB2 catalog whose creator/name begins with this value are listed.

If asterisk notation is specified only, all tables defined in the DB2 catalog are listed.

#### **Commands Allowed on Tables**

The following line commands are available on the table listing screen. Line commands are entered in front of the desired table(s):

Command	Description
I	Displays information on a table.
S	Selects a table to be used with main commands.
U	Unselects a table.
AU	Displays information on access rights to a table.
СО	Displays all columns of a table.
IX	Displays all indexes on a table.
CC	Checks constraints.

The listings of indexes displayed as a result of the "IX" command can be used for further processing, whereas the listings of columns resulting from the "CO" command, as well as the displays resulting from the "AU" or "I" command, are for information purposes only.

A list of all line commands available with the List Tables function can be invoked as a window by entering the help character "?" in front of any of the listed tables.

The commands "AU", "CO", and "IX" can also be used as main commands, which are entered in the command line of the table listing screen and apply to all tables previously selected with the "S" line command.

The INFO main command, which is the equivalent of the "I" line command, displays information on all tables previously selected. All information resulting from the "I" or INFO commands can also be printed.

A list of all main commands available with the List Tables function can be invoked as a window by entering the help character "?" in the command line of the table listing screen.

### **User Authorizations**

- To invoke the User Authorization function
  - Enter function code "U" on the Retrieval of System Tables screen.

The Retrieval of User Authorizations menu is displayed:

```

```

The following functions are available:

Code	Description
С	Displays the columns which can be accessed by the specified grantee.
D	Displays the databases which can be accessed by the specified grantee.
K	Displays the packages which can be accessed by the specified grantee.
P	Displays the plans which can be accessed by the specified grantee.
R	Displays the resources which can be accessed by the specified grantee.
Т	Displays the tables which can be accessed by the specified grantee.
U	Displays the system privileges of the specified grantee.

The following parameter must be specified:

Parameter	T Description	
	A list of all existing DB2 objects of the specified object type to which the specified grantee has access is displayed.	

# **List Statistic Tables**

#### To invoke the List Statistic Tables function

• Enter function code "S" on the Retrieval of System Tables screen.

The Retrieval of Statistic Tables menu is displayed:

     Help
                Exit
```

The following functions are available:

Code	Description
С	Displays the partitioned statistics for columns in a partitioned table space.
D	Displays the distribution of the values of the first column of a partitioned index.
I	Displays the statistics for a partitioned index.
Т	Displays the statistics for a partitioned table space.

The following parameters must be specified:

Parameter	Description
Table Creator	The name of the creator of the table for which the statistics are to be displayed.
Table Name	The name of the table for which the statistics are to be displayed.
Index Owner	The name of the owner of the index for which the index statistics are to be displayed.
Index Name	The name of the index for which the index statistics are to be displayed.
