

# DB2 Special Register Consideration

NDB refreshes the following DB2 special registers automatically to the values, which applied to the least previous executed transaction.

- CURRENT SQLID
- CURRENT SCHEMA
- CURRENT PATH
- CURRENT PACKAGE PATH

NDB refreshes the following DB2 special registers only automatically to the values, which applied to the least previous executed transaction, if the parameter REFRESH=ON is set.

- CURRENT PACKAGESET
- CURRENT SERVER

Those special registers are refreshed regardless whether the previously executed transaction was rolled back or was committed.

All other special registers are not implicitly manipulated by NDB.
