

NAF - CALLNAT Handling - Function 23

With Natural Advanced Facilities, a large number of Natural subprograms is provided. They can be invoked by using a CALLNAT statement in a Natural program.

When you invoke this function, the CALLNATs screen appears with a list of all example programs available that invoke subprograms.

```

Time 15:16:14          *** Natural Spool Administration ***          Date 2002-10-23
User SAG              CALLNATs                                     File 7/411

Cmd  Example  Subprogram Comment                                             Prod

Keyword .... _____

Mark line or use PF key.
Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help  Menu  Exit          --    +                                CANC
    
```

In the Cmd column, you can enter one of the following function codes:

Function Code	Description
E	Edit example source.
L	List example source.
R	Run example source.
X	Execute example source.
D	List documentation.
K	List keywords attached to the object.

Example of Function Code D:

```

16:10:25 Text          USP0001T Library SYSPool          User SAG    2002-10-23
Get currently active Logical Printers          NAF
.
Name of User API ..... USP0001N /* Cataloged interface
Name of Source ..... USP0000P /* Example for the programmer
.
Function ..... Logical printers active for the current ses-
                    sion are returned to the calling program
.
Keywords ..... LPF, ACTIVE, NAF
.
Parameter layout:
