```

You can display, print or reset the log of modifications to the spool file.

This chapter covers the following topics:

- Display/Select Logging Data - Function 41.1
- Print Logging Data - Function 41.2
- Reset Logging Data - Function 41.3

Display/Select Logging Data - Function 41.1

When you invoke this function, the following window appears.

```

Time 10:35:23          *** Natural Spool Administration ***          Date 2002-10-24

```

You can specify the following:

- The number of the desired object type. You can also enter an asterisk (*) to select an object type from a list. To display logging data for all objects types, you can also mark the corresponding field.
- The name of an existing object. You can also enter an asterisk (*) to display logging data for all objects or, for example, L* to display logging data for all object names starting with L.

When you mark the field to select all entries or when you specify an object type without a name, the following window appears:

```
