

ADASBV - Adabas Security by Setting

This Natural profile parameter can be used to prevent invalid results for accesses to Adabas files that are protected by "security-by-setting". When a file that is protected by "security-by-setting" is accessed, invalid results may be returned in some cases where no format buffer is generated and passed to Adabas.

Possible settings	ON	Natural session data is passed. It is recommended that you set ADASBV=ON if you access "security-by-setting"-protected Adabas files. A format buffer is then always passed to Adabas for a database access (even if this is a 2-byte dummy buffer), thus avoiding invalid results.
	OFF	No Natural session data is passed.
Default setting	OFF	
Dynamic specification	yes	
Specification within session	no
