

FAMSTD - Overwriting of Print and Work File Access Method Assignments

This Natural profile parameter controls the automatic overwriting of print and work file access method assignments during session initialization according to the dataset definition in the job control.

See also the AM subparameter of the macros NTPRINT and NETWORK.

Possible settings	ON	All print and work file data sets are automatically assigned to the batch access method AM=STD if the logical dataset name (defined by the DEST subparameter) is defined by job control (same behaviour as with Natural Version 2.2).
	OFF	Automatic print and work file assignment to AM=STD is done only if the file is not assigned to another access method, e.g. AM=NAF. If AM=OFF is specified, no automatic assignment is done. Specify AM=0 if you want to reset the access method type and to allow automatic assignment.
Default setting	OFF	
Dynamic specification	yes	
Specification within session	no
