Controlling Data Output

This part describes how to proceed if a Natural program is to produce multiple reports. Furthermore, it discusses various aspects of how you can control the format of an output report created with Natural, that is, the way in which the data are displayed.

The following topics are covered:

- Report Specification - (*rep*) Notation
- Layout of an Output Page
- Statements DISPLAY and WRITE
- Index Notation for Multiple-Value Fields and Periodic Groups
- Page Titles, Page Breaks, Blank Lines
- Column Headers
- Parameters to Influence the Output of Fields
- Edit Masks - EM Parameter
- Vertical Displays
