Vertical Displays Vertical Displays

Vertical Displays

This chapter describes how you can combine the features of the statements DISPLAY and WRITE to produce vertical displays of field values.

The following topics are covered:

- Creating Vertical Displays
- Combining DISPLAY and WRITE
- Tab Notation T*field
- Positioning Notation x/y
- DISPLAY VERT Statement
- Further Example of DISPLAY VERT with WRITE Statement

Creating Vertical Displays

There are two ways of creating vertical displays:

- You can use a combination of the statements DISPLAY and WRITE.
- You can use the VERT option of the DISPLAY statement.

Combining DISPLAY and WRITE

As described in *Statements DISPLAY and WRITE*, the DISPLAY statement normally presents the data in columns with default headers, while the WRITE statement presents data horizontally without headers.

You can combine the features of the two statements to produce vertical displays of field values.

The DISPLAY statement produces the values of different fields for the same record across the page with a column for each field. The field values for each record are displayed below the values for the previous record.

By using a WRITE statement after a DISPLAY statement, you can insert text and/or field values specified in the WRITE statement between records displayed via the DISPLAY statement.

The following program illustrates the combination of DISPLAY and WRITE:

Vertical Displays Tab Notation - T*field

```
*
READ (3) VIEWEMP BY CITY STARTING FROM 'SAN FRANCISCO'
DISPLAY NAME JOB-TITLE
WRITE 22T 'DEPT:' DEPT
SKIP 1
END-READ
END
```

Output of Program WRITEX04:

Page 1 04-11-11 14:15:55

NAME CURRENT
POSITION

KOLENCE MANAGER

DEPT: TECH05

GOSDEN ANALYST

DEPT: TECH10

WALLACE SALES PERSON

DEPT: SALE20

Tab Notation - T*field

In the previous example, the position of the field DEPT is determined by the tab notation nT (in this case 20T, which means that the display begins in column 20 on the screen).

Field values specified in a WRITE statement can be lined up automatically with field values specified in the first DISPLAY statement of the program by using the tab notation T*field (where field is the name of the field to which the field is to be aligned).

In the following program, the output produced by the WRITE statement is aligned to the field JOB-TITLE by using the notation T*JOB-TITLE:

Output of Program WRITEX05:

04-11-11 14:15:55

Page 1

NAME CURRENT
POSITION

KOLENCE MANAGER
DEPT: TECH05

GOSDEN ANALYST
DEPT: TECH10

WALLACE SALES PERSON
DEPT: SALE20

Positioning Notation x/y

When you use the DISPLAY and WRITE statements in sequence and multiple lines are to be produced by the WRITE statement, you can use the notation x/y (number-slash-number) to determine in which row/column something is to be displayed. The positioning notation causes the next element in the DISPLAY or WRITE statement to be placed x lines below the last output, beginning in column y of the output.

The following program illustrates the use of this notation:

```
** Example 'WRITEX06': WRITE (with n/n)
*********************
DEFINE DATA LOCAL
1 VIEWEMP VIEW OF EMPLOYEES
 2 NAME
 2 FIRST-NAME
 2 MIDDLE-I
 2 ADDRESS-LINE (1:1)
 2 CITY
 2 ZIP
END-DEFINE
READ (3) VIEWEMP BY CITY STARTING FROM 'NEW YORK'
 DISPLAY 'NAME AND ADDRESS' NAME
 WRITE 1/5 FIRST-NAME
        1/30 MIDDLE-I
         2/5 ADDRESS-LINE (1:1)
         3/5 CITY
         3/30 ZIP /
END-READ
END
Output of Program WRITEX06:
         1
                                                       04-11-11 14:15:55
Page

```

DISPLAY VERT Statement

The standard display mode in Natural is horizontal.

With the VERT clause option of the DISPLAY statement, you can override the standard display and produce a vertical field display.

The HORIZ clause option, which can be used in the same DISPLAY statement, re-activates the standard horizontal display mode.

Column headings in vertical mode are controlled with various forms of the AS clause. The following example programs illustrate the use of the DISPLAY VERT statement:

- DISPLAY VERT without AS Clause
- DISPLAY VERT AS CAPTIONED and HORIZ
- DISPLAY VERT AS 'text'
- DISPLAY VERT AS 'text' CAPTIONED
- Tab Notation P*field

DISPLAY VERT without AS Clause

The following program has no AS clause, which means that no column headings are output.

Output of Program DISPLX09:

Note that all field values are displayed vertically underneath one another.

Page 1 04-11-11 14:15:54

RUBIN SYLVIA

NEW YORK

WALLACE MARY

NEW YORK

KELLOGG HENRIETTA

DISPLAY VERT AS CAPTIONED and HORIZ

The following program contains a VERT and a HORIZ clause, which causes some column values to be output vertically and others horizontally; moreover AS CAPTIONED causes the default column headers to be displayed.

Output of Program DISPLX10:

NEWARK

Page 1 04-11-11 14:15:54

NAME	CURRENT	ANNUAL
FIRST-NAME	POSITION	SALARY
RUBIN	SECRETARY	17000
SYLVIA		
WALLACE	ANALYST	38000

Vertical Displays DISPLAY VERT AS 'text'

MARY

KELLOGG DIRECTOR 52000

HENRIETTA

DISPLAY VERT AS 'text'

The following program contains an AS 'text' clause, which displays the specified 'text' as column header.

Note:

A slash (/) within the text element in a DISPLAY statement causes a line advance.

```
** Example 'DISPLX11': DISPLAY (with VERT AS 'text' clause)
***********************
DEFINE DATA LOCAL
1 VIEWEMP VIEW OF EMPLOYEES
 2 NAME
 2 FIRST-NAME
 2 CITY
 2 JOB-TITLE
 2 SALARY (1:1)
END-DEFINE
READ (3) VIEWEMP BY CITY STARTING FROM 'NEW YORK'
 DISPLAY VERT AS 'EMPLOYEES' NAME FIRST-NAME
        HORIZ JOB-TITLE SALARY (1:1)
 SKIP 1
END-READ
END
```

Output of Program DISPLX11:

Page	1			0.4 - 1.1 - 1.1	14:15:54

EMPLOYEES	CURRENT POSITION	ANNUAL SALARY
RUBIN SYLVIA	SECRETARY	17000
WALLACE MARY	ANALYST	38000
KELLOGG HENRIETTA	DIRECTOR	52000

DISPLAY VERT AS 'text' CAPTIONED

The AS 'text' CAPTIONED clause causes the specified text to be displayed as column heading, and the default column headings to be displayed immediately before the field value in each line that is output.

The following program contains an AS 'text' CAPTIONED clause.

Tab Notation P*field Vertical Displays

```
2 NAME
2 FIRST-NAME
2 CITY
2 JOB-TITLE
2 SALARY (1:1)
END-DEFINE
*

READ (3) VIEWEMP BY CITY STARTING FROM 'NEW YORK'
DISPLAY VERT AS 'EMPLOYEES' CAPTIONED NAME FIRST-NAME
HORIZ JOB-TITLE SALARY (1:1)
SKIP 1
END-READ
END
```

Output of Program DISPLX12:

This clause causes the default column headers (NAME and FIRST-NAME) to be placed before the field values:

Page	1		04-11-11	14:15:54
	EMPLOYEES	CURRENT POSITION	ANNUAL SALARY	
NAME RUBI FIRST-NAM		SECRETARY	17000	
NAME WALL		ANALYST	38000	
NAME KELL FIRST-NAM	OGG IE HENRIETTA	DIRECTOR	52000	

Tab Notation P**field*

If you use a combination of DISPLAY VERT statement and subsequent WRITE statement, you can use the tab notation P*field-name in the WRITE statement to align the position of a field to the column and line position of a particular field specified in the DISPLAY VERT statement.

In the following program, the fields SALARY and BONUS are displayed in the same column, SALARY in every first line, BONUS in every second line. The text ***SALARY PLUS BONUS*** is aligned to SALARY, which means that it is displayed in the same column as SALARY and in the first line, whereas the text (IN US DOLLARS) is aligned to BONUS and therefore displayed in the same column as BONUS and in the second line.

```
VERT AS 'INCOME' SALARY (1) BONUS (1,1)
WRITE P*SALARY '***SALARY PLUS BONUS***'
P*BONUS '(IN US DOLLARS)'
SKIP 1
END-READ
END
```

Output of Program WRITEX07:

Page	1			04-11-11	14:15:55	
	NAME	CURRENT POSITION	INCOME			
SMITH			0 0 ***SALARY PL (IN US DOLLA			
POORE (POORE JR SECRETARY		25000 0 ***SALARY PLUS BONUS*** (IN US DOLLARS)			
PREPARA	ATA	MANAGER	46000 9000 ***SALARY PL (IN US DOLLA			

Further Example of DISPLAY VERT with WRITE Statement

See the following example program:

• WRITEX10 - WRITE (with nT, T*field and P*field)
