

# LISTSQL

<b>LISTSQL</b> [ <i>object-name</i> ]
---------------------------------------

This command is only available with Natural for DB2, Natural SQL Gateway, and Natural for SQL/DS.

The command LISTSQL is used to list those Natural statements in the source code of a programming object which are associated with a database access, and also the corresponding SQL commands they have been translated into.

For further information, see

- *LISTSQL Command* in the *Natural for DB2* part of the *Database Management System Interfaces* documentation,
- *LISTSQL Command* in the *Natural SQL Gateway* part of the *Database Management System Interfaces* documentation,
- *LISTSQL Command* in the *Natural for SQL/DS* part of the *Database Management System Interfaces* documentation.
