%A - Play Back a Recording

%A*name*

With the terminal command `%A`*name*, you cause the recording saved under that *name* to be executed again. This requires that your current library is the one in which the recording is stored.

If you issue the command `%A`*name* while a session is being recorded, the recording specified with `%A`*name* will not be executed but the command `%A`*name* is included into the source that is being recorded. Thus, you can execute a recording from within another recording and concatenate a series of recordings to one another. However, you cannot have nested recordings; the execution of the recording that contains the `%A`*name* command stops after that command and is not resumed when the execution of name finishes.

Further information on recording is provided in the section *Natural Recording Utility* in the *Utilities* documentation.

Application Programming Interface: `USR0350N`. See *SYSEXT - Natural Application Programming Interfaces* in the *Utilities* documentation.
