

# %T\* - Position Cursor Outside Window

%T*
-----

Normally, when a window is active and the window contains no input fields (AD=A or AD=M), the cursor is placed in the top left corner of the window.

This terminal command causes the cursor to be placed in a \*COM system variable outside the window when the active window contains no input fields.

Command	Function
%T*	Switches between cursor placement in system variable *COM outside the window and standard cursor placement within the window.

%T\* only applies to the next INPUT statement, and it must be issued *before* the INPUT statement.

See also *Positioning the Cursor to \*COM - the %T\* Terminal Command* (in the *Programming Guide*).
