

# %U - Translate Lower to Upper Case

This command causes Natural to translate lower-case characters to upper-case for alphanumeric input data.

Upper-case translation is in effect by default.

%U influences the interactive input, which is entered, for example, with a Natural `INPUT` statement. It does not, however, influence the input from the stack.

See also the terminal command %L.

Application Programming Interface: USR0350N. See *SYSEXT - Natural Application Programming Interfaces* in the *Utilities* documentation.
