

Use Selection or List Workplan

This option is used to specify a Workplan of the type SELECTION or LIST. These Workplans specify selection criteria for the objects to be processed. See also the section *Workplans*.

The screen **Unload/Load/Scan Selection or List** provides the following fields and PF keys:

Field	PF Key	Explanation
Name	PF4	The name of the Workplan to be processed.
List Workplan		Displays the contents of the Workplan specified in the Name field.
Select Workplan	PF5	Displays a list of all Workplans available. See also <i>List the Available Workplans in the Workplan Library in Administration</i> .
Settings	PF7	Invokes the Unload/Load/Scan Settings screen where you can specify option and parameter settings. See <i>Settings</i> .
