Introduction to Natural for VSAM

This section describes the components and the structure of the Natural interface to VSAM.

This section covers the following topics:

- Components of Natural for VSAM
- Structure of the Natural Interface to VSAM

Components of Natural for VSAM

The Natural interface to VSAM consists of the following components:

- The NVSNUC module, which is mandatory, environment-independent, and delivered as a load module only.
- The NVSPARM module, which is mandatory, contains Natural parameters specific to VSAM, and is delivered in source form only.
- The I/O module, which is mandatory, differs depending on the actual environment, and is delivered in source form only.
- The modules necessary when running with VSAM system files; they are optional and delivered as load modules only.
- The user exits.
- Callable system services.

Natural for VSAM is fully (E)LPA or SVA-compliant for multiple environments (for example, CICS, Com-plete and batch). The NVSPARM module and the appropriate I/O module must be linked to the NATPARM parameter module.

NVSNUC

- NVSFNAT (1)
- NVSFSPO(2)
- NVSFSEC (3)
- NVSISPC (4)
- NVSISPV (4)
- (1) VSAM system-file handling for FNAT, FUSER and FDIC.
- (2) VSAM system-file handling for FSPOOL.
- (3) VSAM system-file handling for FSEC.
- (4) VSAM system-file handling for Natural ISPF.
- (5) IBM's record-level sharing (RLS) query routine to support RLS=CHECK, z/OS only (not CICS).
