OUTDEST - Output Destination for Asynchronous Processing

This Natural profile parameter only applies to Natural under CICS, Com-plete and UTM.

It specifies the destination to which any Natural error message produced by an asynchronous application is to be sent.

Possible settings	1 to 8 characters.	Destination to which a Natural error message is sent. 1 to 8 characters.
Default setting	Setting of profile parameter SENDER	
Dynamic specification	yes	
Specification within session	no	

After an error message has been sent, Natural terminates the asynchronous session.

Under UTM, this parameter is used to specify the ID of the terminal where output from an asynchronous application is to be displayed.

When and how error messages/output from an asynchronous application are output depends on the respective TP monitor. For further information, see:

- *Asynchronous Natural Processing under CICS*

- *Asynchronous Natural Processing under Com-plete/SMARTS*

- *Asynchronous Transaction Processing under UTM*
