

# SRVCMIT - Server Commit Time

For static specification, this parameter is available as a keyword subparameter of the NTRPC macro. For dynamic specification, this parameter is available as a keyword subparameter of the profile parameter RPC.

It specifies the time at which a Natural RPC server automatically commits an RPC conversation or a non-conversational RPC request. This parameter is only evaluated if the profile parameter ETEOP is set to ON.

SRVCMIT is specified on the server side only.

<b>Possible settings</b>	B	The Natural RPC server automatically commits a database transaction before the reply is sent to the client. If the reply fails, the database transaction is already committed.
	A	The Natural RPC server automatically commits a database transaction after the reply has been successfully sent to the client. If the reply fails, the database transaction is rolled back.
<b>Default setting</b>	B	
<b>Dynamic specification</b>	yes	
<b>Specification within session</b>	no	

For further information, see the *Natural Remote Procedure Call (RPC)* documentation.
